## Contents

<b>1. Introduction.....</b>	<b>17</b>
<b>1.1. Scope .....</b>	<b>17</b>
<b>1.2. Audience .....</b>	<b>17</b>
<b>1.3. Contact Information, Support.....</b>	<b>17</b>
<b>1.4. Document Organization .....</b>	<b>17</b>
<b>1.5. Text Conventions .....</b>	<b>18</b>
<b>1.6. Related Documents .....</b>	<b>18</b>
<b>2. Overview.....</b>	<b>19</b>
<b>2.1. About the document .....</b>	<b>19</b>
<b>3. AT COMMANDS .....</b>	<b>20</b>
<b>3.1. Definitions .....</b>	<b>20</b>
<b>3.2. AT Command Syntax.....</b>	<b>21</b>
<b>3.2.1. String Type Parameters .....</b>	22
<b>3.2.2. Command Lines.....</b>	22
<b>3.2.2.1. ME Error Result Code - +CME ERROR: &lt;err&gt; .....</b>	23
<b>3.2.2.2. Message Service Failure Result Code - +CMS ERROR: &lt;err&gt;.....</b>	27
<b>3.2.2.3. Information Responses And Result Codes .....</b>	28
<b>3.2.2.4. Command Response Time-Out .....</b>	29
<b>3.2.2.5. Command Issuing Timing .....</b>	32
<b>3.2.3. Storage.....</b>	33
<b>3.3.1. Factory Profile And User Profiles .....</b>	33
<b>3.2.4. AT Commands Availability Table .....</b>	36
<b>3.5. AT Commands References .....</b>	47
<b>3.5.1. Command Line General Format .....</b>	47
<b>3.5.1.1. Command Line Prefixes.....</b>	47
<b>3.5.1.1.1. Starting A Command Line - AT.....</b>	47
<b>3.5.1.1.2. Last Command Automatic Repetition - A/ .....</b>	47
<b>3.5.1.1.3. Repeat Last Command - AT#/ .....</b>	47
<b>3.5.1.2. General Configuration Commands .....</b>	47
<b>3.5.2.1. AT Interface Backward Compatibility .....</b>	47
<b>3.5.2.1.1. Select Interface Style - #SELINT .....</b>	49
<b>3.5.1.3. Hayes Compliant AT Commands .....</b>	50
<b>3.5.3.1. Generic Modem Control .....</b>	50
<b>3.5.3.1.1. Set To Factory-Defined Configuration - &amp;F.....</b>	50
<b>3.5.3.1.2. Soft Reset - Z .....</b>	50
<b>3.5.3.1.3. Select Active Service Class - +FCLASS .....</b>	50
<b>3.5.3.1.4. Default Reset Basic Profile Designation - &amp;Y.....</b>	51
<b>3.5.3.1.5. Default Reset Full Profile Designation - &amp;P.....</b>	51
<b>3.5.3.1.6. Store Current Configuration - &amp;W .....</b>	51
<b>3.5.3.1.7. Store Telephone Number - &amp;Z .....</b>	52
<b>3.5.3.1.8. Display Stored Numbers - &amp;N.....</b>	52

3.5.3.1.9.	Manufacturer Identification - +GMI .....	52
3.5.3.1.10.	Model Identification - +GMM .....	53
3.5.3.1.11.	Revision Identification - +GMR .....	53
3.5.3.1.12.	Capabilities List - +GCAP .....	53
3.5.3.1.13.	Serial Number - +GSN.....	53
3.5.3.1.14.	Display Configuration And Profile - &V .....	53
3.5.3.1.15.	Display Configuration And Profile - &V0.....	54
3.5.3.1.16.	S Registers Display - &V1 .....	54
3.5.3.1.17.	Extended S Registers Display - &V3 .....	54
3.5.3.1.18.	Display Last Connection Statistics - &V2 .....	55
3.5.3.1.19.	Single Line Connect Message - \V .....	55
3.5.3.1.20.	Country Of Installation - +GCI.....	55
3.5.3.1.21.	Line Signal Level - %L.....	55
3.5.3.1.22.	Line Quality - %Q.....	56
3.5.3.1.23.	Speaker Loudness - L.....	56
3.5.3.1.24.	Speaker Mode - M .....	56
3.5.3.1.25.	Master Reset - +CMAR .....	56
3.5.3.2.	DTE - Modem Interface Control.....	57
3.5.3.2.1.	Command Echo - E .....	57
3.5.3.2.2.	Quiet Result Codes - Q .....	57
3.5.3.2.3.	Response Format - V .....	58
3.5.3.2.4.	Extended Result Codes - X .....	59
3.5.3.2.5.	Identification Information - I .....	59
3.5.3.2.6.	Data Carrier Detect (DCD) Control - &C .....	60
3.5.3.2.7.	Data Terminal Ready (DTR) Control - &D .....	60
3.5.3.2.8.	Standard Flow Control - \Q.....	61
3.5.3.2.9.	Flow Control - &K.....	62
3.5.3.2.10.	Data Set Ready (DSR) Control - &S.....	62
3.5.3.2.11.	Ring (RI) Control - \R .....	63
3.5.3.2.12.	Fixed DTE Interface Rate - +IPR.....	63
3.5.3.2.13.	DTE-Modem Local Flow Control - +IFC .....	65
3.5.3.2.14.	DTE-Modem Local Rate Reporting - +ILRR .....	65
3.5.3.2.15.	DTE-Modem Character Framing - +ICF .....	66
3.5.3.3.	Call Control.....	67
3.5.3.3.1.	Dial - D .....	67
3.5.3.3.2.	Tone Dial - T .....	71
3.5.3.3.3.	Pulse Dial - P .....	71
3.5.3.3.4.	Answer - A .....	71
3.5.3.3.5.	Disconnect - H .....	72
3.5.3.3.6.	Return To On Line Mode - O .....	72
3.5.3.4.	Modulation Control .....	72
3.5.3.4.1.	Modulation Selection - +MS .....	72
3.5.3.4.2.	Line Quality And Auto Retrain - %E .....	73
3.5.3.5.	Compression Control .....	73
3.5.3.5.1.	Data Compression - +DS .....	73
3.5.3.5.2.	Data Compression Reporting - +DR .....	73
3.5.3.6.	S Parameters.....	74
3.5.3.6.1.	Number Of Rings To Auto Answer - S0 .....	74
3.5.3.6.2.	Ring Counter - S1 .....	75
3.5.3.6.3.	Escape Character - S2 .....	75
3.5.3.6.4.	Command Line Termination Character - S3 .....	76
3.5.3.6.5.	Response Formatting Character - S4.....	77

3.5.3.6.6. Command Line Editing Character - S5 .....	78
3.5.3.6.7. Connection Completion Time-Out - S7 .....	78
3.5.3.6.8. – Carrier Off With Firm Time - S10 .....	79
3.5.3.6.9. Escape Prompt Delay - S12 .....	79
3.5.3.6.10. Delay To DTR Off - S25 .....	80
3.5.3.6.11. Disconnect Inactivity Timer - S30 .....	81
3.5.3.6.12. Delay Before Forced Hang Up - S38 .....	82
<b>3.5.4. 3GPP TS 27.007 AT Commands.....</b>	<b>83</b>
<b>3.5.4.1. General.....</b>	<b>83</b>
3.5.4.1.1. Request Manufacturer Identification - +CGMI .....	83
3.5.4.1.2. Request Model Identification - +CGMM .....	83
3.5.4.1.3. Request Revision Identification - +CGMR .....	83
3.5.4.1.4. Request Product Serial Number Identification - +CGSN .....	84
3.5.4.1.5. Select TE Character Set - +CSCS .....	84
3.5.4.1.6. International Mobile Subscriber Identity (IMSI) - +CIMI .....	85
3.5.4.1.7. Multiplexing Mode - +CMUX .....	85
3.5.4.1.8. Select Wireless Network - +WS46 .....	87
3.5.4.1.9. Select preferred MT power class - +CPWC .....	87
<b>3.5.4.2. Call Control.....</b>	<b>88</b>
3.5.4.2.1. Hang Up Call - +CHUP .....	88
3.5.4.2.2. Select Bearer Service Type - +CBST .....	89
3.5.4.2.3. Radio Link Protocol - +CRLP .....	90
3.5.4.2.4. Service Reporting Control - +CR .....	91
3.5.4.2.5. Extended Error Report - +CEER .....	92
3.5.4.2.6. Cellular Result Codes - +CRC .....	93
3.5.4.2.7. Single Numbering Scheme - +CSNS .....	94
3.5.4.2.8. Voice Hang Up Control - +CVHU .....	94
<b>3.5.4.3. Network Service Handling.....</b>	<b>95</b>
3.5.4.3.1. Subscriber Number - +CNUM .....	95
3.5.4.3.2. Read Operator Names - +COPN .....	96
3.5.4.3.3. Network Registration Report - +CREG .....	97
3.5.4.3.4. Operator Selection - +COPS .....	100
3.5.4.3.5. Facility Lock/Unlock - +CLCK .....	103
3.5.4.3.6. Facility Improved Lock/Unlock - @CLCK .....	106
3.5.4.3.7. Change Facility Password - +CPWD .....	107
3.5.4.3.8. Calling Line Identification Presentation - +CLIP .....	108
3.5.4.3.9. Calling Line Identification Restriction - +CLIR .....	111
3.5.4.3.10. Call Forwarding Number And Conditions - +CCFC .....	112
3.5.4.3.11. Call Waiting - +CCWA .....	114
3.5.4.3.12. Call Holding Services - +CHLD .....	117
3.5.4.3.13. Unstructured Supplementary Service Data - +CUSD .....	119
3.5.4.3.14. Advice Of Charge - +CAOC .....	121
3.5.4.3.15. List Current Calls - +CLCC .....	122
3.5.4.3.16. SS Notification - +CSSN .....	124
3.5.4.3.17. Closed User Group - +CCUG .....	126
3.5.4.3.18. Preferred Operator List - +CPOL .....	127
3.5.4.3.19. Selection of preferred PLMN list - +CPLS .....	128
3.5.4.3.20. Call deflection - +CTFR .....	128
<b>3.5.4.4. Mobile Equipment Control .....</b>	<b>129</b>
3.5.4.4.1. Phone Activity Status - +CPAS .....	129
3.5.4.4.2. Set Phone Functionality - +CFUN .....	130
3.5.4.4.3. Enter PIN - +CPIN .....	132

3.5.4.4.4.	Signal Quality - +CSQ .....	137
3.5.4.4.5.	Indicator Control - +CIND.....	139
3.5.4.4.6.	Mobile Equipment Event Reporting - +CMER.....	141
3.5.4.4.7.	Select Phonebook Memory Storage - +CPBS.....	142
3.5.4.4.8.	Read Phonebook Entries - +CPBR .....	143
3.5.4.4.9.	Find Phonebook Entries - +CPBF.....	145
3.5.4.4.10.	Write Phonebook Entry - +CPBW .....	147
3.5.4.4.11.	Clock Management - +CCLK .....	149
3.5.4.4.12.	Alarm Management - +CALA .....	151
3.5.4.4.13.	Postpone alarm - +CAPD.....	155
3.5.4.4.14.	Setting date format - +CSDF .....	155
3.5.4.4.15.	Setting time format - +CSTF .....	156
3.5.4.4.16.	Time Zone reporting - +CTZR.....	157
3.5.4.4.17.	Automatic Time Zone update - +CTZU.....	157
3.5.4.4.18.	Restricted SIM Access - +CRSM .....	158
3.5.4.4.19.	Alert Sound Mode - +CALM .....	159
3.5.4.4.20.	Ringer Sound Level - +CRSL .....	160
3.5.4.4.21.	Loudspeaker Volume Level - +CLVL .....	161
3.5.4.4.22.	Microphone Mute Control - +CMUT .....	162
3.5.4.4.23.	Silence command - +CSIL .....	163
3.5.4.4.24.	Accumulated Call Meter - +CACM .....	163
3.5.4.4.25.	Accumulated Call Meter Maximum - +CAMM .....	164
3.5.4.4.26.	Price per Unit and Currency Table - +CPUC.....	165
3.5.4.4.27.	Call meter maximum event - +CCWE .....	167
3.5.4.4.28.	Available AT Commands - +CLAC .....	167
3.5.4.4.29.	Delete Alarm - +CALD.....	167
3.5.4.4.30.	Read ICCID - +CCID .....	168
3.5.4.4.31.	Generic SIM access - +CSIM .....	168
3.5.4.4.32.	Set Voice Mail Number - +CSVN .....	171
3.5.4.5.	Mobile Equipment Errors.....	171
3.5.4.5.1.	Report Mobile Equipment Error - +CMEE.....	171
3.5.4.5.2.	Set CMEE mode - #CMEEMODE .....	173
3.5.4.6.	Voice Control.....	173
3.5.4.6.1.	DTMF Tones Transmission - +VTS .....	173
3.5.4.6.2.	Tone Duration - +VTD .....	175
3.5.4.7.	Commands For GPRS .....	176
3.5.4.7.1.	GPRS Mobile Station Class - +CGCLASS .....	176
3.5.4.7.2.	GPRS Attach Or Detach - +CGATT .....	177
3.5.4.7.3.	GPRS Event Reporting - +CGEREP .....	177
3.5.4.7.4.	GPRS Network Registration Status - +CGREG .....	179
3.5.4.7.5.	Define PDP Context - +CGDCONT .....	181
3.5.4.7.6.	Quality Of Service Profile - +CGQMIN .....	183
3.5.4.7.7.	Quality Of Service Profile - +CGQREQ .....	185
3.5.4.7.8.	PDP Context - +CGACT .....	187
3.5.4.7.9.	Show PDP Address - +CGPADDR .....	188
3.5.4.7.10.	Enter Data State - +CGDATA .....	190
3.5.4.7.11.	Modify PDP context - +CGCMOD .....	191
3.5.4.8.	Commands For Battery Charger .....	191
3.5.4.8.1.	Battery Charge - +CBC .....	191
3.5.5.	3GPP TS 27.005 AT Commands for SMS and CBS .....	193
3.5.5.1.	General Configuration.....	193
3.5.5.1.1.	Select Message Service - +CSMS .....	193

3.5.5.1.2. Preferred Message Storage - +CPMS .....	195
3.5.5.1.3. Message Format - +CMGF .....	198
3.5.5.2. Message Configuration .....	199
3.5.5.2.1. Service Center Address - +CSCA .....	199
3.5.5.2.2. Set Text Mode Parameters - +CSMP .....	200
3.5.5.2.3. Show Text Mode Parameters - +CSDH .....	206
3.5.5.2.4. Select Cell Broadcast - +CSCB .....	207
3.5.5.2.5. Save Settings - +CSAS .....	208
3.5.5.2.6. Restore Settings - +CRES .....	209
3.5.5.3. Message Receiving And Reading .....	210
3.5.5.3.1. New Message Indications - +CNMI .....	210
3.5.5.3.2. List Messages - +CMGL .....	221
3.5.5.3.3. List Messages - @CMGL .....	228
3.5.5.3.4. Read Message - +CMGR .....	231
3.5.5.3.5. Read Message - @CMGR .....	237
3.5.5.4. Message Sending And Writing .....	240
3.5.5.4.1. Send Message - +CMGS .....	240
3.5.5.4.2. Send Message From Storage - +CMSS .....	247
3.5.5.4.3. Write Message To Memory - +CMGW .....	249
3.5.5.4.4. Delete Message - +CMGD .....	256
3.5.5.4.5. Select service for MO SMS messages - +CGSMS .....	258
3.5.6. FAX Class 1 AT Commands .....	260
3.5.6.1. General Configuration .....	260
3.5.6.1.1. Manufacturer ID - +FMI .....	260
3.5.6.1.2. Model ID - +FMM .....	260
3.5.6.1.3. Revision ID - +FMR .....	260
3.5.6.2. Transmission/Reception Control .....	261
3.5.6.2.1. Stop Transmission And Pause - +FTS .....	261
3.5.6.2.2. Wait For Receive Silence - +FRS .....	261
3.5.6.2.3. Transmit Data Modulation - +FTM .....	262
3.5.6.2.4. Receive Data Modulation - +FRM .....	263
3.5.6.2.5. Transmit Data With HDLC Framing - +FTH .....	263
3.5.6.2.6. Receive Data With HDLC Framing - +FRH .....	264
3.5.6.3. Serial Port Control .....	264
3.5.6.3.1. Select Flow Control - +FLO .....	264
3.5.6.3.2. Serial Port Rate - +FPR .....	265
3.5.6.3.3. Double Escape Character Replacement - +FDD .....	265
3.5.7. Custom AT Commands .....	266
3.5.7.1. General Configuration AT Commands .....	266
3.5.7.1.1. Network Selection Menu Availability - +PACSP .....	266
3.5.7.1.2. Manufacturer Identification - #CGMI .....	266
3.5.7.1.3. Model Identification - #CGMM .....	266
3.5.7.1.4. Revision Identification - #CGMR .....	267
3.5.7.1.5. Product Serial Number Identification - #CGSN .....	267
3.5.7.1.6. International Mobile Subscriber Identity (IMSI) - #CIMI .....	267
3.5.7.1.7. Read ICCID (Integrated Circuit Card Identification) - #CCID .....	267
3.5.7.1.8. Service Provider Name - #SPN .....	268
3.5.7.1.9. Extended Numeric Error report - #CEER .....	268
3.5.7.1.10. Extended error report for Network Reject cause - #CEERNET .....	270
3.5.7.1.11. Select Registration Operation Mode - #REGMODE .....	272
3.5.7.1.12. SMS Commands Operation Mode - #SMSMODE .....	272
3.5.7.1.13. PLMN List Selection - #PLMNNODE .....	273

3.5.7.1.14.	Display PIN Counter - #PCT .....	273
3.5.7.1.15.	Software Shut Down - #SHDN .....	274
3.5.7.1.16.	Extended Reset - #Z.....	274
3.5.7.1.17.	Periodic Reset - #ENHRST .....	275
3.5.7.1.18.	Wake From Alarm Mode - #WAKE .....	276
3.5.7.1.19.	Query Temperature Overflow - #QTEMP .....	277
3.5.7.1.20.	Temperature Monitor - #TEMPMON .....	279
3.5.7.1.21.	Set General Purpose Output - #SGPO .....	282
3.5.7.1.22.	General Purpose Input - #GGPI .....	282
3.5.7.1.23.	General Purpose Input/Output Pin Control - #GPIO .....	283
3.5.7.1.24.	Alarm Pin - #ALARMPIN .....	287
3.5.7.1.25.	STAT_LED GPIO Setting - #SLED .....	287
3.5.7.1.26.	Save STAT_LED GPIO Setting - #SLEDSAV .....	288
3.5.7.1.27.	SMS Ring Indicator - #E2SMSRI .....	288
3.5.7.1.28.	Analog/Digital Converter Input - #ADC .....	289
3.5.7.1.29.	Digital/Analog Converter Control - #DAC .....	291
3.5.7.1.30.	Auxiliary Voltage Output Control - #VAUX .....	292
3.5.7.1.31.	Auxiliary Voltage Output Save - #VAUXSAV .....	294
3.5.7.1.32.	V24 Output pins mode - #V24MODE .....	294
3.5.7.1.33.	V24 Output Pins Configuration - #V24CFG .....	295
3.5.7.1.34.	V24 Output Pins Control - #V24 .....	296
3.5.7.1.35.	RF Transmission Monitor Mode - #TXMONMODE .....	296
3.5.7.1.36.	Battery And Charger Status - #CBC .....	297
3.5.7.1.37.	GPRS Auto-Attach Property - #AUTOATT .....	298
3.5.7.1.38.	Multislot Class Control - #MSCLASS .....	299
3.5.7.1.39.	Cell Monitor - #MONI .....	300
3.5.7.1.40.	Serving Cell Information - #SERVINFO .....	305
3.5.7.1.41.	Network Survey Of Timing Advance - #CSURVTA .....	307
3.5.7.1.42.	+COPS Mode - #COPSMODE .....	309
3.5.7.1.43.	Query SIM Status - #QSS .....	309
3.5.7.1.44.	ATD Dialing Mode - #DIALMODE .....	311
3.5.7.1.45.	Automatic Call - #ACAL .....	312
3.5.7.1.46.	Extended Automatic Call - #ACALEXT .....	314
3.5.7.1.47.	Extended Call Monitoring - #ECAM .....	314
3.5.7.1.48.	SMS Overflow - #SMOV .....	316
3.5.7.1.49.	Mailbox Numbers - #MBN .....	317
3.5.7.1.50.	Message Waiting Indication - #MWI .....	318
3.5.7.1.51.	Audio Codec - #CODEC .....	319
3.5.7.1.52.	Network Timezone - #NITZ .....	321
3.5.7.1.53.	Clock management - #CCLK .....	323
3.5.7.1.54.	Enhanced Network Selection - #ENS .....	324
3.5.7.1.55.	Select Band - #BND .....	325
3.5.7.1.56.	Automatic Band Selection - #AUTOBND .....	326
3.5.7.1.57.	Lock to single band - #BNDLOCK .....	327
3.5.7.1.58.	Skip Escape Sequence - #SKIPESC .....	328
3.5.7.1.59.	Escape Sequence Guard Time - #E2ESC .....	329
3.5.7.1.60.	PPP-GPRS Connection Authentication Type - #GAUTH .....	330
3.5.7.1.61.	PPP-GPRS Parameters Configuration - #GPPPCFG .....	331
3.5.7.1.62.	Enables/disables PPP compression - #GPPPCFGEXT .....	332
3.5.7.1.63.	RTC Status - #RTCSTAT .....	332
3.5.7.1.64.	GSM Antenna Detection - #GSMAD .....	333
3.5.7.1.65.	SIM Detection Mode - #SIMDET .....	335

3.5.7.1.66.	SIM Enhanced Speed - #ENHSIM .....	335
3.5.7.1.67.	Subscriber number - #SNUM .....	336
3.5.7.1.68.	SIM Answer to Reset - #SIMATR .....	337
3.5.7.1.69.	CPU Clock Mode - #CPUMODE .....	337
3.5.7.1.70.	GSM Context Definition - #GSMCONT .....	338
3.5.7.1.71.	IPEGSM configurations - #GSMCONTCFG .....	338
3.5.7.1.72.	Show Address - #CGPADDR .....	339
3.5.7.1.73.	Network Scan Timer - #NWSCANTRM .....	340
3.5.7.1.74.	Call Establishment Lock - #CESTHLCK .....	340

The information in this document has been carefully checked and is believed to be entirely reliable. However, no responsibility is assumed for inaccuracies or omissions. Telit reserves the right to make changes to any products described herein and reserves the right to revise this document and to make changes from time to time in content hereof with no obligation to notify any person of revisions or changes. Telit does not assume any liability arising out of the application or use of any product, software, or circuit described herein; neither does it convey license under its patent rights or the rights of others.

It is possible that this publication may contain references to, or information about Telit products (machines and programs), programming, or services that are not announced in your country. Such references or information must not be construed to mean that Telit intends to announce such Telit products, programming, or services in your country.

**Copyrights**

This instruction manual and the Telit products described in this instruction manual may be, include or describe copyrighted Telit material, such as computer programs stored in semiconductor memories or other media. Laws in the Italy and other countries preserve for Telit and its licensors certain exclusive rights for copyrighted material, including the exclusive right to copy, reproduce in any form, distribute and make derivative works of the copyrighted material. Accordingly, any copyrighted material of Telit and its licensors contained herein or in the Telit products described in this instruction manual may not be copied, reproduced, distributed, merged or modified in any manner without the express written permission of Telit. Furthermore, the purchase of Telit products shall not be deemed to grant either directly or by implication, estoppel, or otherwise, any license under the copyrights, patents or patent applications of Telit, as arises by operation of law in the sale of a product.

**Computer Software Copyrights**

The Telit and 3rd Party supplied Software (SW) products described in this instruction manual may include copyrighted Telit and other 3rd Party supplied computer programs stored in semiconductor memories or other media. Laws in the Italy and other countries preserve for Telit and other 3rd Party supplied SW certain exclusive rights for copyrighted computer programs, including the exclusive right to copy or reproduce in any form the copyrighted computer program. Accordingly, any copyrighted Telit or other 3rd Party supplied SW computer programs contained in the Telit products described in this instruction manual may not be copied (reverse engineered) or reproduced in any manner without the express written permission of Telit or the 3rd Party SW supplier. Furthermore, the purchase of Telit products shall not be deemed to grant either directly or by implication, estoppel, or otherwise, any license under the copyrights, patents or patent applications of Telit or other 3rd Party supplied SW, except for the normal non-exclusive, royalty free license to use that arises by operation of law in the sale of a product.

## Usage and Disclosure Restrictions

### License Agreements

The software described in this document is the property of Telit and its licensors. It is furnished by express license agreement only and may be used only in accordance with the terms of such an agreement.

### Copyrighted Materials

Software and documentation are copyrighted materials. Making unauthorized copies is prohibited by law. No part of the software or documentation may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language or computer language, in any form or by any means, without prior written permission of Telit

### High Risk Materials

Components, units, or third-party products used in the product described herein are NOT fault-tolerant and are NOT designed, manufactured, or intended for use as on-line control equipment in the following hazardous environments requiring fail-safe controls: the operation of Nuclear Facilities, Aircraft Navigation or Aircraft Communication Systems, Air Traffic Control, Life Support, or Weapons Systems ("High Risk Activities"). Telit and its supplier(s) specifically disclaim any expressed or implied warranty of fitness for such High Risk Activities.

# 1. Introduction

## 1.1. Scope

This document is aimed in providing an detailed specification and a comprehensive listing as a reference for the whole set of AT command

## 1.2. Audience

Readers of this document should be familiar with Telit modules and their ease of controlling by means of AT Commands.

## 1.3. Contact Information, Support

For general contact, technical support, to report documentation errors and to order manuals, contact Telit Technical Support Center (TTSC) at:

[TS-EMEA@telit.com](mailto:TS-EMEA@telit.com)

[TS-NORTHAMERICA@telit.com](mailto:TS-NORTHAMERICA@telit.com)

[TS-LATINAMERICA@telit.com](mailto:TS-LATINAMERICA@telit.com)

[TS-APAC@telit.com](mailto:TS-APAC@telit.com)

Alternatively, use:

<http://www.telit.com/en/products/technical-support-center/contact.php>

For detailed information about where you can buy the Telit modules or for recommendations on accessories and components visit:

<http://www.telit.com>

To register for product news and announcements or for product questions contact Telit Technical Support Center (TTSC).

Our aim is to make this guide as helpful as possible. Keep us informed of your comments and suggestions for improvements.

Telit appreciates feedback from the users of our information.

## 1.4. Document Organization

This document contains the following chapters:

Chapter 1: “Introduction” provides a scope for this document, target audience, contact and support information, and text conventions.

Chapter 2: “Overview” about the aim of this document and implementation suggestions.

Chapter 3: “AT Commands” The core of this reference guide.

## 1.5. Text Conventions

**Danger – This information MUST be followed or catastrophic equipment failure or bodily injury may occur.**

**Caution or Warning – Alerts the user to important points about integrating the module, if these points are not followed, the module and end user equipment may fail or malfunction.**

**Tip or Information – Provides advice and suggestions that may be useful when integrating the module.**

All dates are in ISO 8601 format, i.e. YYYY-MM-DD.

## 1.6. Related Documents

- Hayes standard AT command set

## 2. Overview

### 2.1. About the document

This document is to describe all AT commands implemented on the Telit wireless modules listed on the Applicability Table.

---

#### NOTE:

Telit suggests all the system developers to use always the newer AT Commands Interface Style defined by AT#SELINT=2; and in case you are starting a new design we highly recommend you to use the newer AT Commands Interface Style defined by AT#SELINT=2 which gives you a possibility to include all Telit's new features and also all future implementations.

Moreover, Telit suggests to use the following settings to get the performance most customers are looking for:

**AT#SMSMODE=1**  
**AT#REGMODE=1**

---

## 3. AT COMMANDS

The Telit wireless module family can be controlled via the serial interface using the standard AT commands<sup>1</sup>. The Telit wireless module family is compliant with:

1. Hayes standard AT command set, in order to maintain the compatibility with existing SW programs.
2. 3GPP TS 27.007 specific AT command and GPRS specific commands.
3. 3GPP TS 27.005 specific AT commands for SMS (Short Message Service) and CBS (Cell Broadcast Service)
4. FAX Class 1 compatible commands

Moreover Telit wireless module family supports also Telit proprietary AT commands for special purposes.

The following is a description of how to use the AT commands with the Telit wireless module family.

### 3.1. Definitions

The following syntactical definitions apply:

- <CR> **Carriage return character**, is the command line and result code terminator character, which value, in decimal ASCII between 0 and 255, is specified within parameter **S3**. The default value is 13.
- <LF> **Linefeed character**, is the character recognised as line feed character. Its value, in decimal ASCII between 0 and 255, is specified within parameter **S4**. The default value is 10. The line feed character is output after carriage return character if verbose result codes are used (**V1** option used) otherwise, if numeric format result codes are used (**V0** option used) it will not appear in the result codes.
- <...> Name enclosed in angle brackets is a syntactical element. They do not appear in the command line.
- [...] Optional subparameter of a command or an optional part of TA information response is enclosed in square brackets. Brackets themselves do not appear in the command line. When subparameter is not given in AT commands which have a Read command, new value equals to its previous value. In AT commands which do not store the values of any of their subparameters, and so have not a Read command, which are called *action type* commands, action should be done on the basis of the recommended default setting of the subparameter.

---

<sup>1</sup> The AT is an ATTENTION command and is used as a prefix to other parameters in a string. The AT command combined with other parameters can be set up in the communications package or typed in manually as a command line instruction. combined with other parameters can be set up in the communications package or typed in manually as a command line instruction.

## 3.2. AT Command Syntax

The syntax rules followed by Telit implementation of either Hayes AT commands, GSM commands and FAX commands are very similar to those of standard basic and extended AT commands. A special command (#SELINT, see §3.5.2.1.1) has been introduced in order to have an AT interface very close to the standard one.

There are two types of extended command:

- **Parameter type commands.** This type of commands may be “set” (to store a value or values for later use), “read” (to determine the current value or values stored), or “tested” (to determine ranges of values supported). Each of them has a test command (trailing =?) to give information about the type of its subparameters; they also have a Read command (trailing ?) to check the current values of subparameters.
- **Action type commands.** This type of command may be “executed” or “tested”.
- “executed” to invoke a particular function of the equipment, which generally involves more than the simple storage of a value for later use
- “tested” to determine:

*(if the command #SELINT=0 or #SELINT=1 has been issued, see §3.5.2.1.1)*  
if subparameters are associated with the action, the ranges of subparameters values that are supported; if the command has no subparameters, issuing the correspondent Test command (trailing =?) raises the result code “**ERROR**”.

Note: issuing the Read command (trailing ?) causes the command to be executed.

*(if the command #SELINT=2 has been issued, see §3.5.2.1.1)*  
whether or not the equipment implements the Action Command (in this case issuing the correspondent Test command - trailing =? - returns the **OK** result code), and, if subparameters are associated with the action, the ranges of subparameters values that are supported.

Action commands don't store the values of any of their possible subparameters.

Moreover:

- *(for #SELINT=0 or #SELINT=1 only)*  
An enhanced test command (trailing =??) has been introduced to maintain backward compatibility for those commands whose subparameters changed the range of possible values from version to version.
- *(for #SELINT=2 only)*  
The response to the Test Command (trailing =?) may be changed in the future by Telit to allow the description of new values/functionalities

- (for #SELINT=2 only)

If all the subparameters of a parameter type command +CMD are optional, issuing AT+CMD=<CR> causes the **OK** result code to be returned and the previous values of the omitted subparameters to be retained.

### 3.2.1. String Type Parameters

A string, either enclosed between quotes or not, is considered to be a valid string type parameter input. According to V25.ter space characters are ignored on the command line and may be used freely for formatting purposes, unless they are embedded in numeric or quoted string constants; therefore a string containing a space character has to be enclosed between quotes to be considered a valid string type parameter (e.g. typing AT+COPS=1,0,"A1" is the same as typing AT+COPS=1,0,A1; typing AT+COPS=1,0,"A BB" is different from typing AT+COPS=1,0,A BB).

When #SELINT=0 (or 1) mode is selected, a string not enclosed between quotes is changed in upper case (e.g. **mickey** become **MICKEY**), while a string enclosed between quotes is case sensitive.

When #SELINT=2 mode is selected, a string is always case sensitive.

A small set of commands requires always to write the input string parameters within quotes: this is explicitly reported in the specific descriptions.

### 3.2.2. Command Lines

A command line is made up of three elements: the **prefix**, the **body** and the **termination character**.

The **command line prefix** consists of the characters "AT" or "at", or, to repeat the execution of the previous command line, the characters "A/" or "a/" or AT#/ or at#/.

The **termination character** may be selected by a user option (parameter S3), the default being <CR>.

The basic structures of the command line are:

- ATCMD1<CR> where AT is the command line prefix, CMD1 is the body of a **basic command** (nb: the name of the command never begins with the character "+") and <CR> is the command line terminator character
- ATCMD2=10<CR> where 10 is a subparameter

- **AT+CMD1;+CMD2=, ,10<CR>** These are two examples of **extended commands** (nb: the name of the command always begins with the character “+”<sup>2</sup>). They are delimited with semicolon. In the second command the subparameter is omitted.
- **+CMD1?<CR>** This is a Read command for checking current subparameter values
- **+CMD1=?<CR>** This is a test command for checking possible subparameter values

These commands might be performed in a single command line as shown below:

**ATCMD1 CMD2=10+CMD1;+CMD2=, ,10;+CMD1?;+CMD1=?<CR>**

anyway it is always preferable to separate into different command lines the basic commands and the extended commands; furthermore it is suggested to avoid placing several action commands in the same command line, because if one of them fails, then an error message is received but it is not possible to argue which one of them has failed the execution.

If command **V1** is enabled (verbose responses codes) and all commands in a command line has been performed successfully, result code **<CR><LF>OK<CR><LF>** is sent from the TA to the TE, if subparameter values of a command are not accepted by the TA or command itself is invalid, or command cannot be performed for some reason, result code **<CR><LF>ERROR<CR><LF>** is sent and no subsequent commands in the command line are processed.

If command **V0** is enabled (numeric responses codes), and all commands in a command line has been performed successfully, result code **0<CR>** is sent from the TA to the TE, if sub-parameter values of a command are not accepted by the TA or command itself is invalid, or command cannot be performed for some reason, result code **4<CR>** and no subsequent commands in the command line are processed.

In case of errors depending on ME operation, **ERROR** (or **4**) response may be replaced by **+CME ERROR: <err>** or **+CMS ERROR: <err>**.

#### NOTE:

The command line buffer accepts a maximum of 80 characters. If this number is exceeded none of the commands will be executed and TA returns **ERROR**.

##### 3.2.2.1.

#### ME Error Result Code - **+CME ERROR: <err>**

This is NOT a command, it is the error response to **+Cxxx 3GPP TS 27.007** commands.  
Syntax: **+CME ERROR: <err>**

<sup>2</sup> The set of **proprietary AT commands** differentiates from the standard one because the name of each of them begins with either “@”, “#”, “\$” or “\*”. **Proprietary AT commands** follow the same syntax rules as **extended commands**

Parameter: <err> - error code can be either numeric or verbose (see +CMEE). The possible values of <err> are reported in the table:

Numeric Format	Verbose Format
<b>General errors:</b>	
0	phone failure
1	No connection to phone
2	phone-adaptor link reserved
3	operation not allowed
4	operation not supported
5	PH-SIM PIN required
10	SIM not inserted
11	SIM PIN required
12	SIM PUK required
13	SIM failure
14	SIM busy
15	SIM wrong
16	incorrect password
17	SIM PIN2 required
18	SIM PUK2 required
20	memory full
21	invalid index
22	not found
23	memory failure
24	text string too long
25	invalid characters in text string
26	dial string too long
27	invalid characters in dial string
30	no network service
31	network time-out
32	network not allowed - emergency calls only
40	network personalization PIN required
41	network personalization PUK required
42	network subset personalization PIN required
43	network subset personalization PUK required
44	service provider personalization PIN required
45	service provider personalization PUK required
46	corporate personalization PIN required
47	corporate personalization PUK required
<b>General purpose error:</b>	
100	unknown
<b>GPRS related errors to a failure to perform an Attach:</b>	
103	Illegal MS (#3)*
106	Illegal ME (#6)*
107	GPRS service not allowed (#7)*
111	PLMN not allowed (#11)*
112	Location area not allowed (#12)*
113	Roaming not allowed in this location area (#13)*
<b>GPRS related errors to a failure to Activate a Context and others:</b>	
132	service option not supported (#32)*
133	requested service option not subscribed (#33)*
134	service option temporarily out of order (#34)*

Numeric Format	Verbose Format
148	unspecified GPRS error
149	PDP authentication failure
150	invalid mobile class
<b>Network survey errors:</b>	
(only if command #SELINT=0 or #SELINT=1 has been issued - see §3.5.2.1.1):	
257	Network survey error (No Carrier)*
258	Network survey error (Busy)*
259	Network survey error (Wrong request)*
260	Network survey error (Aborted)*
<b>IP Easy related errors</b>	
(only if command #SELINT=0 or #SELINT=1 has been issued - see §3.5.2.1.1):	
400	generic undocumented error
401	wrong state
402	wrong mode
403	context already activated
404	stack already active
405	activation failed
406	context not opened
407	cannot setup socket
408	cannot resolve DN
409	time-out in opening socket
410	cannot open socket
411	remote disconnected or time-out
412	connection failed
413	tx error
414	already listening
<b>FTP related errors</b>	
(only if command #SELINT=0 or #SELINT=1 has been issued - see §3.5.2.1.1):	
420	ok
421	connect
422	disconnect
423	error
424	wrong state
425	can not activate
426	can not resolve name
427	can not allocate control socket
428	can not connect control socket
429	bad or no response from server
430	not connected
431	already connected
432	context down
433	no photo available
434	can not send photo
<b>IP Easy related errors</b>	
(only if command #SELINT=2 has been issued - see §3.5.2.1.1):	
550	generic undocumented error
551	wrong state
552	wrong mode
553	context already activated
554	stack already active
555	activation failed
556	context not opened
557	cannot setup socket

Numeric Format	Verbose Format
558	cannot resolve DN
559	timeout in opening socket
560	cannot open socket
561	remote disconnected or time-out
562	connection failed
563	tx error
564	already listening
566	can not resume socket
567	wrong APN
568	wrong PDP
569	service not supported
570	QOS not accepted
571	NSAPI already used
572	LLC or SNDCP failure
573	network reject
<b>Custom SIM Lock related errors:</b>	
586	MCL personalisation PIN required
<b>FTP related errors</b> (only if command #SELINT=2 has been issued - see §3.5.2.1.1):	
600	Generic undocumented error
601	wrong state
602	Can not activate
603	Can not resolve name
604	Can not allocate control socket
605	Can not connect control socket
606	Bad or no response from server
607	Not connected
608	Already connected
609	Context down
610	No photo available
611	Can not send photo
612	Resource used by other instance
613	Data socket yet opened in CmdMode
614	FTP CmdMode data socket closed
<b>Network survey errors:</b> (only if command #SELINT=2 has been issued - see §3.5.2.1.1):	
657	Network survey error (No Carrier)*
658	Network survey error (Busy)*
659	Network survey error (Wrong request)*
660	Network survey error (Aborted)*
<b>SAP related errors:</b> (only if command #SELINT=2 has been issued - see §3.5.2.1.1):	
731	Unspecified
732	Activation command is busy
733	Activation started with CMUX off
734	Activation started on invalid CMUX
736	Remote SIM already active
737	Invalid parameter
<b>SSL related errors</b> (only if command #SELINT=2 has been issued - see §3.5.2.1.1):	
830	SSL generic error
831	SSL cannot activate
832	SSL socket error

Numeric Format	Verbose Format
833	SSL not connected
834	SSL already connected
835	SSL already activated
836	SSL not activated
837	SSL certs and keys wrong or not stored
838	SSL error enc/dec data
839	SSL error during handshake
840	SSL disconnected
<b>PING related errors</b>	
<b>(only if command #SELINT=2 has been issued - see §3.5.2.1.1):</b>	
900	Generic undocumented error
901	Timeout
902	Destination unreachable
903	Can not resolve name
904	Context down
<b>SiRFInstantFix related errors</b>	
920	SGEE update initialization stage failed
921	SGEE file is not newer than the last stored one
922	SGEE update generic error

\*(values in parentheses are GSM 04.08 cause codes)

### 3.2.2.2. Message Service Failure Result Code - +CMS ERROR: <err>

This is NOT a command, it is the error response to +Cxxx 3GPP TS 27.005 commands.

Syntax: **+CMS ERROR: <err>**

Parameter: **<err>** - numeric error code.

The **<err>** values are reported in the table:

Numeric Format	Meaning
0...127	GSM 04.11 Annex E-2 values
128...255	3GPP TS 23.040 sub clause 9.2.3.22 values
300	ME failure
301	SMS service of ME reserved
302	operation not allowed
303	operation not supported
304	invalid PDU mode parameter
305	invalid text mode parameter
310	SIM not inserted
311	SIM PIN required
312	PH-SIM PIN required
313	SIM failure
314	SIM busy

Numeric Format	Meaning
315	SIM wrong
316	SIM PUK required
317	SIM PIN2 required
318	SIM PUK2 required
320	memory failure
321	invalid memory index
322	memory full
330	SMSC address unknown
331	no network service
332	network time-out
500	unknown error
512	FDN not allowed number

### 3.2.3. Information Responses And Result Codes

The TA response, in case of verbose response format enabled, for the previous examples command line could be as shown below:

- information response to **+CMD1?**  
**<CR><LF>+CMD1:2,1,10<CR><LF>**
- information response to **+CMD1=?**  
**<CR><LF>+CMD1(0-2),(0,1),(0-15)<CR><LF>**
- final result code      **<CR><LF>OK<CR><LF>**

Moreover there are other two types of result codes:

- result codes* that inform about progress of TA operation (e.g. connection establishment **CONNECT**)
- result codes* that indicate occurrence of an event not directly associated with issuance of a command from TE (e.g. ring indication **RING**).

Here the basic result codes according to ITU-T V25Ter recommendation

Result Codes	
Numeric form	Verbose form
0	OK
1	CONNECT or CONNECT <text> <sup>3</sup>
2	RING
3	NO CARRIER

<sup>3</sup> For SELINT 0,1 <text> is only “300”; for SELINT 2 <text> can be “300”, “1200”, “2400”, “4800”, “9600”, “14400” or “1200/75”

<b><i>Result Codes</i></b>	
4	ERROR
5	CONNECT 1200 <sup>4</sup>
6	NO DIALTONE
7	BUSY
8	NO ANSWER
10	CONNECT 2400 <sup>4</sup>
11	CONNECT 4800 <sup>4</sup>
12	CONNECT 9600 <sup>4</sup>
15	CONNECT 14400 <sup>4</sup>
23	CONNECT 1200/75 <sup>4</sup>

### 3.2.4. Command Response Time-Out

Every command issued to the Telit modules returns a result response, if response codes are enabled (default). The time needed to process the given command and return the response varies, depending on the command type. Commands that do not interact with the SIM or the network, and only involve internal setups or readings, have an immediate response. Commands that interact with the SIM or the network could take many seconds to send a response, depending on SIM configuration (e.g., number of contacts stored in the phonebook, number of stored SMS), or on the network the command may interact with.

In the table below are listed only the commands whose interaction with the SIM or the network could lead to long response timings. When not otherwise specified, timing is referred to set command.

For phonebook and SMS writing and reading related commands, timing is referred to commands issued after phonebook sorting is completed.

For DTMF sending and dialling commands timing is referred to module registered on network ("AT+CREG?" answer is "+CREG: 0,1" or "+CREG: 0,5").

For Python commands, timing is referred to commands issued with module in idle, flash memory not full and not fragmented, and after the first Python command. The first Python command to be issued causes a system initialization that could last a couple of minutes. Baud rate is fixed at 115200.

Command	Estimated maximum time to get response (Seconds)
+COPS	30 (test command)
+CLK	25 (SS operation) 5 (FDN enabling/disabling)
+CLAC	5
+CPWD	15 (SS operation) 5 (PIN modification)
+CLIP	15 (read command)
+CLIR	15 (read command)
+CCFC	15
+CCWA	15
+CHLD	30

<sup>4</sup> Valid for SELINT 0,1 only

Command	Estimated maximum time to get response (Seconds)
+CPIN	5
+CPBS	5 (FDN enabling/disabling)
+CPBR	5 (single reading) 15 (complete reading of a 250 records full phonebook)
+CPBF	10 (string present in a 250 records full phonebook) 5(string not present)
+CPBW	5
+CACM	5
+CAMM	5
+CPUC	5
+VTS	20 (transmission of full “1234567890*#ABCD” string with no delay between tones, default duration)
+CSCA	5 (read and set commands)
+CSAS	5
+CRES	5
+CMGS	60 after CTRL-Z for SMS not concatenated; 1 to get ‘>’ prompt
+CMSS	60 after CTRL-Z; 1 to get ‘>’ prompt
+CMGW	5 after CTRL-Z for SMS not concatenated; 1 to get ‘>’ prompt
+CMGD	5 (single SMS cancellation) 25 (cancellation of 50 SMS)
+CMGR	5
+CMGL	20 (full listing of 50 SMS)
+CGACT	150
+CGATT	10
D	30 (voice call) Timeout set with ATS7 (data call)
A	30 (voice call) Timeout set with ATS7 (data call)
H	30
+CHUP	5
+COPN	10
+CPOL	10 (set command; read command of 84 records)
+CRSM	5
+FRH	Timeout set with ATS7
+FTH	Timeout set with ATS7
+FRM	Timeout set with ATS7
+FTM	Timeout set with ATS7
+FRS	Timeout set with the command itself
+FTS	Timeout set with the command itself
#MBN	10
#TONE	5 (if no duration specified)
#ADC	5
#EMAILD	20

<b>Command</b>	<b>Estimated maximum time to get response (Seconds)</b>
#EMAILACT	150
#SEMAIL	170 (context activation + DNS resolution)
#MSCLASS	15
#SPN	5
#STSR	10
#CCID	5
#GPRS	150
#SKTD	140 (DNS resolution + timeout set with AT#SKTCT)
#SKTOP	290 (context activation + DNS resolution + timeout set with AT#SKTCT)
#QDNS	20
#FTPOPEN	100
#FTPCLOSE	500 (timeout set with AT#FTPTO, in case no response is received from server)
#FTPTYPE	500 (timeout set with AT#FTPTO, in case no response is received from server)
#FTPDELE	500 (timeout set with AT#FTPTO, in case no response is received from server)
#FTPPWD	500 (timeout set with AT#FTPTO, in case no response is received from server)
#FTPCWD	500 (timeout set with AT#FTPTO, in case no response is received from server)
#FTPLIST	500 (timeout set with AT#FTPTO, in case no response is received from server) + time to get listing
#FTPFSIZE	500 (timeout set with AT#FTPTO, in case no response is received from server)
#FTPPUT	500 (timeout set with AT#FTPTO, in case no response is received from server)
#FTPAPP	500 (timeout set with AT#FTPTO, in case no response is received from server)
#FTPGET	500 (timeout set with AT#FTPTO, in case no response is received from server)
#FTPGETPKT	500 (timeout set with AT#FTPTO, in case no response is received from server)
#SGACT	150
#SH	3
#SD	140 (DNS resolution + connection timeout set)

<b>Command</b>	<b>Estimated maximum time to get response (Seconds)</b>
	with AT#SCFG)
#CSURV	10 to start data output; 120 seconds to complete scan
#CSURVC	10 to start data output; 120 seconds to complete scan
#CSURVU	10 to start data output; 120 seconds to complete scan
#CSURVUC	10 to start data output; 120 seconds to complete scan
#CSURVB	10 to start data output; 120 seconds to complete scan
#CSURVBC	10 to start data output; 120 seconds to complete scan
#CSURVP	10 to start data output; 120 seconds to complete scan
#CSURVPC	10 to start data output; 120 seconds to complete scan
#LSCRIPT	10 (40 files, 10 Kbyte each)
#REBOOT	5
#RSCRIPT	30 seconds for a 100 Kbyte file  30 seconds timeout and ERROR message if no bytes are received on the serial line
#WSCRIPT	35 seconds for a 100 Kbyte file  30 seconds timeout and ERROR message if no bytes are sent on the serial line and the file has not been completely sent
#DSCRIPT	120
\$GPSAI	5

### 3.2.5. Command Issuing Timing

The chain Command -> Response shall always be respected and a new command must not be issued before the module has terminated all the sending of its response result code (whatever it may be).

This applies especially to applications that “sense” the **OK** text and therefore may send the next command before the complete code <CR><LF>**OK**<CR><LF> is sent by the module.

It is advisable anyway to wait for at least 20ms between the end of the reception of the response and the issue of the next AT command.

If the response codes are disabled and therefore the module does not report any response to the command, then at least the 20ms pause time shall be respected.

During command mode, due to hardware limitations, under severe CPU load the serial port can loose some characters if placed in autobauding at high speeds. Therefore if you encounter this problem fix the baud rate with +IPR command.

## 3.3. Storage

### 3.3.1. Factory Profile And User Profiles

The Telit wireless modules stores the values set by several commands in the internal non volatile memory (NVM), allowing to remember this setting even after power off. In the NVM these values are set either as **factory profile** or as **user profiles**: there are **two customizable user profiles** and **one factory profile** in the NVM of the device: by default the device will start with user profile 0 equal to factory profile.

For backward compatibility each profile is divided into two sections, one **base section** which was historically the one that was saved and restored in early releases of code, and the **extended section** which includes all the remaining values.

The **&W** command is used to save the actual values of **both sections** of profiles into the NVM user profile.

Commands **&Y** and **&P** are both used to set the profile to be loaded at startup. **&Y** instructs the device to load at startup only the **base section**. **&P** instructs the device to load at startup the full profile: **base + extended sections**.

The **&F** command resets to factory profile values only the command of the base section of profile, while the **&F1** resets to factory profile values the full set of base + extended section commands.

The values set by other commands are stored in NVM outside the profile: some of them are stored always, without issuing any **&W**, some other are stored issuing specific commands (+CSAS, #SLEDSAV, #VAUXSAV, #SKTSAV, #ESAV, #PSAV and \$GPSSAV); all of these values are read at power-up.

The values set by following commands are stored in the profile base section; if **#SELINT=2** they depend on the specific AT instance:

<b>GSM DATA MODE</b>	+CBST
<b>AUTOBAUD</b>	+IPR
<b>COMMAND ECHO</b>	E
<b>RESULT MESSAGES</b>	Q
<b>VERBOSE MESSAGES</b>	V
<b>EXTENDED MESSAGES</b>	X
<b>FLOW CONTROL OPTIONS</b>	&K, +IFC
<b>DSR (C107) OPTIONS</b>	&S
<b>DTR (C108) OPTIONS</b>	&D
<b>RI (C125) OPTIONS</b>	\R
<b>POWER SAVING</b>	+CFUN
<b>DEFAULT PROFILE</b>	&Y0
<b>S REGISTERS</b>	S0;S2;S3;S4;S5;S7;S12;S25;S30;S38
<b>CHARACTER FORMAT</b>	+ICF

The values set by following commands are stored in the profile extended section and, if the newer AT command interface style has been selected (see **#SELINT=2**), they depend on the specific AT instance (see **+CMUX**):

+FCLASS	+ILRR	+DR
+CSCS	+CR	+CRLP
+CRC	+CSNS	+CVHU
+CREG	+CLIP	+CLIR
+CCWA	+CUSD	+CAOC
+CSSN	+CIND	+CMER
+CPBS	+CMEE	+CGREG
+CGEREP	+CMGF	+CSDH
+CNMI	#QSS	#ACAL <sup>5</sup>
#TEMPMON <sup>6</sup>	#ACALEXT	#ECAM
#SMOV	#MWI	#NITZ
#SKIPESC	#E2ESC	#STIA
\$GPSNMUN	#CESTHLCK	#CFLO
+CSTF	+CSDF	+CTZU
+CAPD	+CCWE	+CSIL
+CTZR	#CFF	#CODECINFO
#CMEEMODE	#MMSSNH	

The values set by following commands are stored in the profile extended section and they don't depend on the specific AT instance (see **+CMUX**):

+CALM	+CRSL	+CMUT <sup>5</sup>
+CLVL <sup>5</sup>	+VTD	+CSCB <sup>7</sup>
#CAP <sup>5</sup>	#SRS <sup>5</sup>	#SRP <sup>5</sup>
#STM <sup>5</sup>	#DVI	#E2SMSRI
#DAC	#CODEC	#SHFEC <sup>5</sup>
#HFMICG <sup>5</sup>	#HSMICG	#SHFSD <sup>5</sup>
#SPKMUT	#NITZ	#E2SLRI
#SIMDET	#TEMPMON <sup>6</sup>	#PSEL
#HFRECG	#HSRECG	#SHFAGC
#SHSAGC	#SHSEC	#SHSNR
#SHFNRR	#SHSSD	#TSVOL
#CPUMODE	#DVIEXT	#PSMRI

The values set by following commands are automatically stored in NVM, without issuing any storing command and independently from the profile (unique values), and are automatically restored at startup:

<sup>5</sup> If **#SELINT=2** they depend on the CMUX 0 instance only

<sup>6</sup> It is partially stored in NVM, moreover only a part of it can depend on the specific **CMUX** instance; see command description.

<sup>7</sup> +CSCB is still stored in the profile extended section only for backward compatibility issues: its actual storing and restoring are accomplished issuing +CSAS and +CRES

#SELINT	+COPS <sup>8</sup>	+CGCLASS
+CGDCONT	+CGQMIN	+CGQREQ
#REGMODE	#PLMNODE	#COPSMODE
#DIALMODE	#BND	#AUTOBND
#ENS	#SCFG	#JDR
#ENHSIM	#AUTOATT	#TXMONMODE
#TTY	#ICMP	#GSMCONT
#NWSCANTMR	#SMSMODE	#DNS
#TCPMAXDAT	#TCPREASS	#SWLEVEL
#CPASMODE	#FASTCCID	+CGSMS
#V24MODE	+CPLS	#SIMINCFG
#RS485		

The values set by following commands are stored in NVM on demand, issuing specific commands and independently from the profile:

+CSCA	+CSMP	+CSCB
-------	-------	-------

*stored by +CSAS<sup>9</sup> command and restored by +CRES<sup>9</sup> command*

#SLED		
-------	--	--

*stored by #SLEDSAV<sup>10</sup> command*

#VAUX		
-------	--	--

*stored by #VAUXSAV<sup>11</sup> command*

#USERID	#PASSW	#PKTSZ
#DSTO	#SKTTO	#SKTSET
#SKTCT		

*stored by #SKTSAV command and automatically restored at startup; factory default valutes are restored by #SKTRST command*

#ESMTP	#EADDR	#EUSER
#EPASSW		

*stored by #ESAV command and automatically restored at startup; factory default valutes are restored by #ERST command.*

\$GPSP	\$GPSD	\$GPSAT
\$GPSAP	\$GPS	\$GPSCON

*stored by \$GPSSAV command and automatically restored at startup; factory default valutes are restored by \$GPSRST command*

#BIQUADIN	# BIQUADINEX	# BIQUADOUT
# BIQUADOUTEX		

*stored by #PSAV command and automatically restored at startup; factory default valutes are restored by #PRST command.*

<sup>8</sup> It is partially stored in NVM; see command description.

<sup>9</sup> Both commands +CSAS (see §3.x.3.2.5) and +CRES (see §3.x.3.2.6) deal with non-volatile memory, intending for it either the NVM and the SIM storage.

<sup>10</sup> Valid for #SELINT=2 only.

<sup>11</sup> Valid for #SELINT=2 only.

## 3.4. AT Commands Availability Table

The following table shows the link Software Version / Product. It is used jointly with the second reported table to verify if the selected AT command is supported by the couple Software Version / Product.

Software Version	Applicable products
<u>SW 10.00.xx7</u> <u>16.00.xx2</u>	GE865-QUAD, GC864-QUAD V2, GC864-DUAL V2, GE864-QUAD V2, GE864-DUAL V2, GE864-QUAD AUTOMOTIVE V2, GE864-QUAD ATEX, GL865-DUAL, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GL865-QUAD, GT863-PY, GT864-PY, GT864-QUAD, GE864-GPS
<u>SW 13.00.xx4</u>	GE910-QUAD, GE910-GNSS

The following table lists the AT commands set and matches the availability of every single command with the Telit module by means of the software version as showed on the table above.

COMMAND	<u>SW 10.00.xx7</u> <u>16.00.xx2</u>	<u>SW 13.00.xx4</u>	Function	Page
<b>Command Line General Format – Command Line Prefixes</b>

#CCLK	•	•	Clock management	323
#ENS	•	•	Enhanced Network Selection	324
#BND <sup>15</sup>	•	•	Select Band	325
#AUTOBND <sup>17</sup>	•	•	Automatic Band Selection	326
#BNDLOCK	•	•	Lock to single band	327
#SKIPESC	•	•	Skip Escape Sequence	326
#E2ESC	•	•	Escape Sequence Guard Time	329
#GAUTH	•	•	PPP-GPRS Connection Authentication Type	330
#GPPPCFG	•	•	PPP-GPRS Parameters Configuration	331
#GPPPCFGEXT	•	-	enables/disables PPP compression	332
#RTCSTAT	•	•	RTC Status	332
#GSMAD	•	•	GSM Antenna Detection	333
#SIMDET	•	•	SIM Detection Mode	335
#ENHSIM	•	•	SIM Enhanced Speed	335
#SNUM	•	•	Subscriber Number	336
#SIMATR	•	•	SIM Answer to reset	337
#CPUMODE	•	-	CPU Clock Mode	337
#GSMCONT	•	•	GSM Context Definition	338
#GSMCONTCFG	•	•	IPEGSM configurations	338
#CGPADDR	•	•	Show Address	339
#NWSCANTRM	•	•	Network Selection Timer	340
#CESTHLCK	•	•	Call Establishment Lock	340
#CPASMODE	•	•	Phone activity status	341
#FASTCCID	•	•	ICCID SIM file reading mode	341
#I2CWR	•	•	I2C data via GPIO	342
#I2CRD	•	•	I2C data from GPIO	343
#PSMRI	•	•	Power saving mode ring	344
#SWLEVEL	•	•	Software level selection	344
#CFLO	•	•	Command flow control	345
#CMGLCONCINDEX	•	•	Report concatenated SMS indexes	345
#CODECINFO	•	•	Codec Information	346
#SII	•	•	Second Interface Instance	348
#SYSHALT	• <sup>16</sup>	-	System turn-off	350
#ENAUSIM	•	-	Enable USIM application	351
#SIMINCFG	• <sup>18</sup>	-	SIMIN pin configuration	350
#LANG	•	•	Select language	351
#CFF	•	•	Call Forwarding Flags	352
#CHUP	•	•	Hang Up Call	353
#ENCALG	•	•	Set Encryption Algorithm	353
#RS485	•	-	RS485 enable/disable and configure	355
+CAPD	•	•	Postpone alarm	155
#CSURVTA	•	•	Network Survey Of Timing Advance	307
#RFSTS	•	•	Read current network status	355
#CMUXMODE	•	•	Set CMUX mode	356
#PORTCFG	-	•	Connect physical ports to Service Access Points	357
<b>Audio Commands</b>				
#CAP	• <sup>15</sup>	-	Change audio path	571

<sup>15</sup> Not available for GC864-DUAL, GC864-DUAL V2, GE864-DUAL V2, GL865-DUAL, GL865-DUAL V3, GL868-DUAL V3 and GL868-DUAL

<sup>16</sup> Only available on GL865-QUAD, GL865-DUAL, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL

COMMAND	<u>SW 10.00.xx7</u> <u>16.00.xx2</u>	<u>SW 13.00.xx4</u>	Function	Page
#AXE	• <sup>17</sup>	-	AXE pin reading	573
#SRS	•	•	Select ringer sound	573
#SRP	• <sup>15</sup>	-	Select ringer path	575
#HFMICG	•	•	Hands free microphone gain	576
#HSMICG	• <sup>15</sup>	-	Handset microphone gain	577
#HFRECG	•	•	Handsfree receiver gain	577
#HSRECG	• <sup>15</sup>	-	Handset Receiver Gain	578
#SHFSD	•	•	Set headset sidetone	578
#SHSSD	• <sup>15</sup>	-	Set handset sidetone	578
#SPKMUT	•	•	Speaker Mute Control	579
#OAP	•	•	Open audio path	580
#BUZZERMODE	•	-	Sets two frequency modes for buzzer	580
#STM	•	•	Signaling Tones Mode	581
#TONE	•	•	Tone playback	582
#TONEEXT	•	•	Extended tone generation	582
#TSVOL	•	•	Tone classes volume	583
#UDTSET	•	•	UDTSET command	585
#UDTSAV	•	•	UDTSAV command	585
#UDTRST	•	•	UDTRST command	586
#PSEL	•	•	Audio profile selection	586
#PSAV	•	•	Audio profile configuration save	587
#PRST	•	•	Audio profile factory configuration	587
#PSET	•	•	Audio profile setting	591
#HFCFG	• <sup>18</sup>	-	Handsfree configuration	592
#TXCNI	• <sup>20</sup>	-	TX noise injector configuration	593
#SHFEC	•	•	Handsfree echo canceller	593
#SHSEC	• <sup>15</sup>	-	Handset echo canceller	594
#SHFAGC	•	•	Handsfree automatic gain control	596
#SHSAGC	• <sup>15</sup>	-	Handset automatic gain	596
#SHFNRR	•	•	Handsfree noise reduction	597
#SHSNR	• <sup>15</sup>	-	Handset noise reduction	597
#ECHOCFG	• <sup>19</sup>	•	Echo reducer configuration	595
#BIQUADIN	•	•	Cascaded filters	588
#BIQUADOUT	•	•	Cascaded filters	589
#BIQUADINEX	•	•	Extended uplink biquad filters	589
#BIQUADOUTEX	•	•	Extended downlink biquad filters	590
#DTMF	•	•	Embedded DTMF decoder enabling	597
#DTMFCFG	•	•	Embedded DTMF decoder configuration	598
#SPCM	•	•	PCM play and receive	601
#TTY	•	•	Teletype writer	602
#DVI	•	•	Digital voiceband interface	599
#DVIEXT	•	•	Digital Voiceband Interface Extension	600
<b>ECALL Commands</b>				
#EMRGD	•	•	Dial an emergency call	603
#MSDPUSH	• <sup>20</sup>	-	IVS push mode activation	605
#MSDSEND	• <sup>23</sup>	-	Sending MSD data to IVS	605
+CECALL	• <sup>23</sup>	-	Initiate eCall	605
<b>SSL Commands</b>				
#SSLCFG	•	•	Config general params of a SSL socket	606
#SSLD	•	•	Opening a socket SSL to a remote server	607

<sup>17</sup> Not available on GE865-QUAD, GL865-DUAL, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL and GL865-QUAD

<sup>18</sup> Not available on GL865-DUAL V3, GL868-DUAL V3

<sup>19</sup> Available only on GL865-DUAL V3, GL868-DUAL V3

<sup>20</sup> GE864-QUAD AUTOMOTIVE V2, GE864-GPS e GL865-QUAD only

**AT Commands Reference Guide**  
80000ST10025a Rev. 17 – 2013-05-24

COMMAND	<u>SW 10.00.xx7</u> <u>16.00.xx2</u>	<u>SW 13.00.xx4</u>	Function	Page
#SSLEN	•	•	Enabling a SSL socket	609
#SSLFASTD	•	•	Fast redial	610
#SSLH	•	•	Closing a SSL socket	611
#SSLO	•	•	Restoring a SSL socket after a +++	611
#SSLRECV	•	•	Reading data from a SSL socket	612
#SSLS	•	•	Reporting the status	613
#SSLSECCFG	•	•	Configuring security params of a SSL socket	614
#SSLSECDATA	•	•	Managing the security data	615
#SSLSEND	•	•	Sending data through a SSL socket	617
#SSLSENDEXT	•	•	Sending data through a secure socket in Command Mode extended	618
<b>Custom AT Commands – AT Run Commands</b>				
#SMSATRUN	•	•	Enable SMS Run AT Service	358
#SMSATRUNCFG	•	•	Set SMS Run AT Service parameters	358
#SMSATWL	•	•	SMS AT Run white list	359
#TCPATRUNCFG	•	•	Set TCP Run AT service parameters	360
#TCPATRUNL	•	•	TCP Run AT Service in server mode	362
#TCPATRUNFRWL	•	•	TCP AT Run Firewall list	363
#TCPATRUNAUTH	•	•	TCP AT Run authentication param list	364
#TCPATRUND	•	•	TCP AT Run in client mode	365
#TCPATRUNCLOSE	•	•	Close TCP Run AT socket	366
#TCPATCMDSEQ	•	•	TCP AT Run command sequence	366
#TCPATCONSER	•	•	TCP Run AT service to serial port	366
#ATRUNDELAY	•	•	Run AT Command execution	367
<b>CONSUME Commands</b>				
#CONSUMECFG	•	•	Configure consume parameters	375
#ENA CONSUME	•	•	Enable consume functionality	377
#STATSCONSUME	•	•	Report consume statistics	378
#BLOCKCONSUME	•	•	Block/unblock a type of service	379
<b>Custom AT Commands – Event Monitor Commands</b>				
#ENAEVMONI	•	•	Enable EvMoni Service	368
#ENAEVMONICFG	•	•	EvMoni Service params	368
#EVMONI	•	•	Event monitoring	369
#CMGS	•	•	Send message	372
#CMGW	•	•	Write message to memory	374
<b>Custom AT Commands – FOTA Commands</b>				
#OTASNAP	•	•	set network access point	380
#OTASUAN	•	•	set user answer	382
#OTASETRI	•	•	OTA Set Ring Indicator	386
#OTAIPCFG	•	•	Saves IP port and IP address for OTA over IP	387
#OTAIPUPD	•	•	Starts an OTA Update over IP	388
#OTASNAPIP	•	•	OTA Set IP port and address for OTA over IP	389
#OTASNAPIPCFG	•	•	OTA Set Access Point Name for OTA over IP	391
<b>Custom AT Commands – Multisocket</b>				
#SS	•	•	Socket Status	393
#SI	•	•	Socket Info	395
#SGACT	•	•	Context Activation	397
#SH	•	•	Socket Shutdown	398
#SCFG	•	•	Socket Configuration	398
#SCFGEXT	•	•	Socket Configuration Extended	399
#SCFGEXT2	•	•	Socket Configuration Extended	401
#SD	•	•	Socket Dial	404
#SO	•	•	Socket Restore	406
#SL	•	•	Socket Listen	406
#SA	•	•	Socket Accept	408
#SRECV	•	•	Receive Data In Command Mode	408
#SEND	•	•	Send Data In Command Mode	410

## AT Commands Reference Guide 80000ST10025a Rev. 17 – 2013-05-24

COMMAND	<u>SW 10.00.xx7</u> <u>16.00.xx2</u>	<u>SW 13.00.xx4</u>	Function	Page
#SSENDEXT	•	•	Send Data In Command Mode Extended	411
#SLUDP	•	•	Socket listen UDP	407
#SGACTAUTH	•	•	IP Easy authentication type	412
#SGACTCFG	•	•	Context activation and configuration	412
#SGACTCFGEXT	•	•	Context activation and configuration extended	413
#PADCMD	•	•	PAD Command features	414
#PADFWD	•	•	PAD forward character	415
#BASE64	•	•	Base64 encoding/decoding of data sent/received on a skt	415
#SENDUDP	•	•	send UDP data to a specific remote host	417
#SENDUDPEXT	•	•	send UDP data to a specific remote host extended	419
#ST	•	•	Socket Type	420
#SLASTCLOSURE	•	•	Detect the cause of a socket disconnection	422
<b>Custom AT Commands – FTP</b>				
#FTPTO	•	•	FTP Time-Out	423
#FTPOPEN	•	•	FTP Open	424
#FTPCLOSE	•	•	FTP Close	425
#FTPPUT	•	•	FTP Put	425
#FTPGET	•	•	FTP Get	426
#FTPGETPKT	•	•	FTP Get in command mode	427
#FTPTYPE	•	•	FTP Type	428
#FTPMMSG	•	•	FTP Read Message	428
#FTPDELETE	•	•	FTP Delete	429
#FTPPWD	•	•	FTP Print Working Directory	430
#FTPCWD	•	•	FTP Change Working Directory	430
#FTPLIST	•	•	FTP List	430
#FTPAPP	•	•	FTP append	431
#FTPAPEXT	•	•	send data on a FTP data port	432
#FTPFSIZE	•	•	Get file size	431
#FTPRECV	•	•	Receive data in command mode	435
#FTPCFG	•	•	FTP configuration	437
#FTPREST	•	•	Set restart position	434
<b>Custom AT Commands – Enhanced IP Easy Extension</b>				
#USERID	•	•	Authentication User ID	438
#PASSW	•	•	Authentication Password	439
#PKTSZ	•	•	Packet Size	440
#DSTO	•	•	Data Sending Time-Out	441
#SKTTO	•	•	Socket Inactivity Time-Out	442
#SKTSET	•	•	Socket Definition	444
#SKTOP	•	•	Socket Open	446
#QDNS	•	•	Query DNS	446
#CACHEDNS	•	•	DNS Response Caching	448
#DNS	•	•	Manual DNS Selection	448
#SKTCT	•	•	Socket TCP Connection Time-Out	450
#SKTSAV	•	•	Socket Parameters Save	451
#SKTRST	•	•	Socket Parameters Reset	452
#GPRS	•	•	GPRS fext Activation	453
#SKTD	•	•	Socket Dial	456
#SKTL	•	•	Socket Listen	458
@SKTL	•	•	Socket Listen Improved	462
#E2SLRI	•	•	Socket Listen Ring Indicator	464
#FRWL	•	•	Firewall Setup	464
#FRWLIPV6	-	•	Firewall Setup for IPV6 addresses	467
#GDATAVOL	•	•	GPRS Data Volume	468
#ICMP	•	•	ICMP Support	469
#TCPMAXDAT	•	•	Maximum TCP Payload Size	469
#TCPREASS	•	•	TCP Reassembly	470

COMMAND	<u>SW 10.00.xx7</u> <u>16.00.xx2</u>	<u>SW 13.00.xx4</u>	Function	Page
#PING	•	•	Ping command	470
#NWDNS	•	•	DNS from Network	449
<b>Custom AT Commands – E-Mail Management</b>				
#ESMTP	•	•	E-mail SMTP Server	471
#EADDR	•	•	E-mail Sender Address	472
#EUSER	•	•	E-mail Authentication User Name	473
#EPASSW	•	•	E-mail Authentication Password	474
#SEMAIL	•	•	E-mail Sending With GPRS Context Activation	475
#EMAILACT	•	•	E-mail GPRS Context Activation	477
#EMAILD	•	•	E-mail Sending	479
#ESAV	•	•	E-mail Parameters Save	481
#ERST	•	•	E-mail Parameters Reset	482
#EMAILMSG	•	•	SMTP Read Message	482
#SMTPCL	•	•	send mail with attachment	483
#NTP	•	•	Network Time	484
<b>Custom AT Commands – Easy Scan® Extension</b>				
#CSURV	•	•	Network Survey	485
#CSURVC	•	•	Network Survey (Numeric Format)	491
#CSURVU	•	•	Network Survey Of User Defined Channels	497
#CSURVUC	•	•	Network Survey Of User Defined Channels (Numeric Format)	498
#CSURVB	•	•	BCCH Network Survey	500
#CSURVBC	•	•	BCCCH Network Survey (Numeric Format)	500
#CSURVF	•	•	Network Survey Format	501
#CSURVNLF	•	•	<CR><LF> Removing On Easy Scan® Commands Family	502
#CSURVEXT	•	•	Extended Network Survey	503
#CSURVP	•	•	PLMN Network Survey	503
#CSURVPC	•	•	PLMN Network Survey (Numeric Format)	504
<b>Custom AT Commands – SIM Toolkit</b>				
#STIA	•	•	SIM Toolkit Interface Activation	504
#STGI	•	•	SIM Toolkit Get Information	510
#STSRR	•	•	SIM Toolkit Send Response	516
#STTA	•	•	SIM Toolkit Terminal Attach	518
<b>Jammed Detect &amp; Report AT commands</b>				
#JDR	•	•	Jammed Detect & Report	518
#JDRENH	•	•	control Jammed Detect & Report feature	521
<b>Custom AT Commands - Easy Script® Extension - Python Interpreter<sup>21</sup></b>				
#WSCRIPT	•	•	Write Script	523
#ESCRIPT	•	•	Select Active Script	526
#STARTMODESCR	•	•	Script Execution Start Mode	527
#EXECSCR	•	•	Execute Active Script	529
#RSCRIPT	•	•	Read Script	529
#LSCRIPT	•	•	List Script Names	530
#DSCRIPT	•	•	Delete Script	533
#REBOOT	•	•	Reboot	533
#CMUXSCR	•	-	CMUX Interface Enable	534
<b>Custom AT Commands - SAP</b>				
#RSEN	•	-	Remote SIM Enable	570
<b>Custom AT Commands - MMS</b>				
#MMSSET	-	•	Set network parameters for MMS	535
#MMSSGS	-	•	General settings	536
#MMSTO	-	•	Create/Update MMS Message Mailing List	537
#MMSSEND	-	•	Send a MMS Message	537
#MMSATTD	-	•	Add MMS Attachment	539

<sup>21</sup> Python is a registered trademark of the Python Software Foundation.

COMMAND	<u>SW 10.00.xx7</u> <u>16.00.xx2</u>	<u>SW 13.00.xx4</u>	Function	Page
#MMSMSG	-	•	HTTP Last Message	540
#MMSSNH	-	•	Set Notification Handling	540
#MMSLN	-	•	List Notifications	541
#MMSGET	-	•	Get MMS	542
#MMSFWD	-	•	Forward MMS	542
#MMSDEL	-	•	Delete MMS from the MMS proxy server	542
#MMSLIMG	-	•	List MMS files	543
#MMSDIMG	-	•	Delete image file	543
Custom AT Commands – HTTP client				
#HTTPCFG	•	•	Configure HTTP parameters	543
#HTTPQRY	•	•	Send HTTP GET, HEAD or DELETE request	545
#HTTPSND	•	•	Send HTTP POST or PUT request	547
#HTTPRCV	•	•	Receive HTTP server data	549

Custom AT Commands - GPS Application					
COMMAND	GE865-QUAD, GL865-QUAD, GL865-DUAL, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL	GE864-GPS	GE910-QUAD, GE910-GNSS	Function	Page

\$GPSACP	•	•	•	GPS Actual Position Information	557
\$GPSCON	•	•	•	Direct Access To GPS Module	559
\$GPSPRG <sup>24</sup>		-		Set The GPS Module In Programming Mode	559
\$GPSPS	•	•	•	Set the GPS Module In Power Saving Mode	560
\$GPSWK	•	•	•	Wake Up GPS From Power Saving Mode	560
\$GPSSAV	•	•	•	Save GPS Parameters Configuration	560
\$GPSRST	•	•	•	Restore Default GPS Parameters	561
\$GPSCMODE <sup>24</sup>	-	-		GPS Controller Disabled at Start-up With Charger Inserted	561
\$GPSIFIX	•	•	•	Set GPS SiRFInstantFix™ Parameters	565
\$FTPGETIFIX	•	•	•	Get SGE File for SiRFInstantFix™	562
\$HTTPGETIFIX	-	-	•	Get SGE File for SiRFInstantFix™	563
\$GPSGPIO	•	-	•	GPIO Configuration for GPS control	563
\$GPSSERSPEED	-	-	•	Set the GPS serial port speed	566
\$DPATCH	-	-	•	Delete Patch from NVM	567
\$EPATCH	-	-	•	Enable Patch	567
\$LPATCH	-	-	•	List Available Patch	568
\$WPATCH	-	-	•	Write Patch on flash	569

<sup>22</sup> GE864-GPS Excluded

<sup>23</sup> Available for the GPS products with the following Order-Num.: 3990250689 and 3990250690

## 3.5. AT Commands References

### 3.5.1. Command Line General Format

#### 3.5.1.1. Command Line Prefixes

##### 3.5.1.1.1. Starting A Command Line - AT

AT - Starting A Command Line		SELINT 0 / 1 / 2
AT	The prefix <b>AT</b> , or <b>at</b> , is a two-character abbreviation ( <b>ATtention</b> ), always used to start a command line to be sent from TE to TA, with the only exception of <b>AT#/</b> prefix	
Reference	3GPP TS 27.007	

##### 3.5.1.1.2. Last Command Automatic Repetition - A/

A/ - Last Command Automatic Repetition		SELINT 0 / 1 / 2
A/	<p>If the prefix <b>A/</b> or <b>a/</b> is issued, the MODULE immediately execute once again the body of the preceding command line. No editing is possible and no termination character is necessary. A command line may be repeated multiple times through this mechanism, if desired.</p> <p>If <b>A/</b> is issued before any command line has been executed, the preceding command line is assumed to have been empty (that results in an <b>OK</b> result code).</p> <p>Note: this command works only at fixed IPR.</p> <p>Note: the custom prefix <b>AT#/</b> has been defined: it causes the last command to be executed again too; but it doesn't need a fixed IPR.</p>	
Reference	V25ter	

##### 3.5.1.1.3. Repeat Last Command - AT#/

AT#/ - Repeat Last Command		SELINT 0 / 1 / 2
AT#	The prefix <b>AT#</b> is used to execute again the last received command.	

## 3.5.2. General Configuration Commands

### 3.5.2.1. AT Interface Backward Compatibility

There are some slight modifications amongst the AT interfaces of Telit products. In order to keep backward compatibility and on the same time to give the opportunity to the customer to get competitor compatibility, Telit modules offer the specific command **#SELINT** to switch the behaviour of the device and its AT command interface. It is up to the user to select the AT interface he prefers.

**AT Commands Reference Guide**  
80000ST10025a Rev. 17 – 2013-05-24

The following table shows which AT commands interface can be applied and is default for the specific product:

Product	#SELINT=0	#SELINT=1	#SELINT=2
GT863-PY			•(default)
GT864-QUAD			•(default)
GT864-PY			•(default)
GE864-QUAD	•	•	•(default)
GE864-QUAD V2	•	•	•(default)
GE864-GPS			•(default)
GE864-QUAD ATEX			•(default)
GE864-QUAD AUTOMOTIVE V2			•(default)
GC864-QUAD with and without SIM Holder	•	•	•(default)
GC864-QUAD V2 with and without SIM Holder	•	•	•(default)
GC864-DUAL and GC864-DUAL V2			•(default)
GE864-DUAL V2			•(default)
GE865-QUAD			•(default)
GL865-DUAL			•(default)
GL865-DUAL V3, GL868-DUAL V3			•(default)
GL868-DUAL			•(default)
GE910-QUAD	.	.	•(default)
GE910-GNSS			•(default)

### 3.5.2.1.1. Select Interface Style - #SELINT

#SELINT - Select Interface Style		SELINT 0 / 1
AT#SELINT[=<v>]	<p>Set command sets the AT command interface style depending on parameter &lt;v&gt;.</p> <p>Parameter:</p> <p>&lt;v&gt; - AT command interface style</p> <ul style="list-style-type: none"> <li>0 - switches the AT command interface of the products, to the GM862-GSM and GM862-GPRS interface style</li> <li>1 - switches the AT command interface of the products, to the GM862-PCS, PYTHON, QUAD-PY, TRIZIUM and GE863-QUAD, PY interface style</li> <li>2 - switches the AT command interface style of the product, to the new products like GE864, GC864 and the GPS products<sup>24</sup></li> </ul> <p>Note: If parameter is omitted then the behaviour of Set command is the same as read command.</p>	
AT#SELINT?	Read command reports the current interface style.	
AT#SELINT=?	Test command reports the available range of values for parameter <v>.	
Note	It's suggested to reboot the module after every #SELINT setting.	

#SELINT - Select Interface Style		SELINT 2
AT#SELINT=[<v>]	<p>Set command sets the AT command interface style depending on parameter &lt;v&gt;.</p> <p>Parameter:</p> <p>&lt;v&gt; - AT command interface style</p> <ul style="list-style-type: none"> <li>0 - switches the AT command interface of the products, to the GM862-GSM and GM862-GPRS interface style</li> <li>1 - switches the AT command interface of the products, to the GM862-PCS, PYTHON, QUAD-PY, TRIZIUM and GE863-QUAD, PY interface style</li> <li>2 - switches the AT command interface style of the product, to the new products like GE864, GC864 and the GPS products<sup>12</sup></li> </ul>	
AT#SELINT?	Read command reports the current interface style.	
AT#SELINT=?	Test command reports the available range of values for parameter <v>.	
Note	It's suggested to reboot the module after every #SELINT setting.	
Note	Issuing AT#SELINT=<v> when the 3GPP TS 27.010 multiplexing protocol control channel has been enabled (see +CMUX) causes an <b>ERROR</b> result code to be returned.	
Note	Issuing AT#SELINT=<v> when the ENS functionality has been previously enabled (see #ENS) causes an <b>ERROR</b> result code to be returned.	
Note	Issuing AT#SELINT=<v> when the SMS Commands Operation Mode has been previously enabled (see #SMSMODE) causes an <b>ERROR</b> result code to be returned.	

<sup>24</sup> Under the #SELINT=2, all the new functionalities like CMUX, SAP, Multisocket are available. Moreover, all the AT commands have been improved according to the ETSI specifications.

### 3.5.3. Hayes Compliant AT Commands

#### 3.5.3.1. Generic Modem Control

##### 3.5.3.1.1. Set To Factory-Defined Configuration - &F

&F - Set To Factory-Defined Configuration		SELINT 0 / 1 / 2
AT&F[<value>]	<p>Execution command sets the configuration parameters to default values specified by manufacturer; it takes in consideration hardware configuration switches and other manufacturer-defined criteria.</p> <p>Parameter:  <b>&lt;value&gt;</b>:</p> <ul style="list-style-type: none"> <li>0 - just the factory profile base section parameters are considered.</li> <li>1 - either the factory profile base section and the extended section are considered (full factory profile).</li> </ul> <p>Note: if parameter <b>&lt;value&gt;</b> is omitted, the command has the same behaviour as <b>AT&amp;F0</b></p>	
Reference	V25ter.	

##### 3.5.3.1.2. Soft Reset - Z

Z - Soft Reset		SELINT 0 / 1 / 2
ATZ[<n>]	<p>Execution command loads the base section of the specified user profile and the extended section of the default factory profile.</p> <p>Parameter:  <b>&lt;n&gt;</b></p> <ul style="list-style-type: none"> <li>0..1 - user profile number</li> </ul> <p>Note: any call in progress will be terminated.</p> <p>Note: if parameter <b>&lt;n&gt;</b> is omitted, the command has the same behaviour as <b>ATZ0</b>.</p>	
Reference	V25ter.	

##### 3.5.3.1.3. Select Active Service Class - +FCLASS

+FCLASS - Select Active Service Class		SELINT 0 / 1 / 2
AT+FCLASS=<n>	<p>Set command sets the wireless module in specified connection mode (data, fax, voice), hence all the calls done afterwards will be data or voice.</p> <p>Parameter:  <b>&lt;n&gt;</b></p> <ul style="list-style-type: none"> <li>0 - data</li> <li>1 - fax class 1</li> <li>8 - voice</li> </ul>	

<b>+FCLASS - Select Active Service Class</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+FCLASS?</b>	Read command returns the current configuration value of the parameter <n>.	
<b>AT+FCLASS=?</b>	Test command returns all supported values of the parameters <n>.	
Reference	3GPP TS 27.007	

### 3.5.3.1.4. Default Reset Basic Profile Designation - &Y

<b>&amp;Y - Default Reset Basic Profile Designation</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT&amp;Y[&lt;n&gt;]</b>	<p>Execution command defines the basic profiles which will be loaded on startup.</p> <p>Parameter:</p> <p>&lt;n&gt;</p> <p>0..1 - profile (default is 0): the wireless module is able to store 2 complete configurations (see <b>&amp;W</b>).</p> <p>Note: differently from command <b>Z&lt;n&gt;</b>, which loads just once the desired profile, the one chosen through command <b>&amp;Y</b> will be loaded on every startup.</p> <p>Note: if parameter is omitted, the command has the same behaviour as <b>AT&amp;Y0</b></p>	

### 3.5.3.1.5. Default Reset Full Profile Designation - &P

<b>&amp;P - Default Reset Full Profile Designation</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT&amp;P[&lt;n&gt;]</b>	<p>Execution command defines which full profile will be loaded on startup.</p> <p>Parameter:</p> <p>&lt;n&gt;</p> <p>0..1 – profile number: the wireless module is able to store 2 full configurations (see command <b>&amp;W</b>).</p> <p>Note: differently from command <b>Z&lt;n&gt;</b>, which loads just once the desired profile, the one chosen through command <b>&amp;P</b> will be loaded on every startup.</p> <p>Note: if parameter is omitted, the command has the same behaviour as <b>AT&amp;P0</b></p>	

### 3.5.3.1.6. Store Current Configuration - &W

<b>&amp;W - Store Current Configuration</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT&amp;W[&lt;n&gt;]</b>	Execution command stores on profile <n> the complete configuration of the device.	

&W - Store Current Configuration	SELINT 0 / 1 / 2
	0..1 - profile  Note: if parameter is omitted, the command has the same behaviour of <b>AT&amp;W0</b> .

### 3.5.3.1.7. Store Telephone Number - &Z

&Z - Store Telephone Number In The Wireless Module Internal Phonebook	SELINT 0 / 1 / 2
AT&Z<n>=<nr>	<p>Execution command stores in the record &lt;n&gt; the telephone number &lt;nr&gt;. The records cannot be overwritten, they must be cleared before rewriting.</p> <p>Parameters:          &lt;n&gt; - phonebook record          &lt;nr&gt; - telephone number (string type)</p> <p>Note: the wireless module has a built in non volatile memory in which 10 telephone numbers of a maximum 24 digits can be stored</p> <p>Note: to delete the record &lt;n&gt; the command AT&amp;Z&lt;n&gt;=&lt;CR&gt; must be issued.</p> <p>Note: the records in the module memory can be viewed with the command &amp;N, while the telephone number stored in the record <i>n</i> can be dialed by giving the command ATDS=&lt;n&gt;.</p>

### 3.5.3.1.8. Display Stored Numbers - &N

&N - Display Internal Phonebook Stored Numbers	SELINT 0 / 1 / 2
AT&N[<n>]	<p>Execution command returns the telephone number stored at the &lt;n&gt; position in the internal memory.</p> <p>Parameter:          &lt;n&gt; - phonebook record number</p> <p>Note: if parameter &lt;n&gt; is omitted then all the internal records are shown.</p>

### 3.5.3.1.9. Manufacturer Identification - +GMI

+GMI - Manufacturer Identification	SELINT 0 / 1 / 2
AT+GMI	<p>Execution command returns the manufacturer identification.</p> <p>Note: this is one of the commands whose output differs depending on the last #SELINT setting.</p>
Reference	V.25ter

### 3.5.3.1.10. Model Identification - +GMM

+GMM - Model Identification		SELINT 0 / 1 / 2
AT+GMM	Execution command returns the model identification.	
Reference	V.25ter	

### 3.5.3.1.11. Revision Identification - +GMR

+GMR - Revision Identification		SELINT 0 / 1 / 2
AT+GMR	Execution command returns the software revision identification.	
Reference	V.25ter	

### 3.5.3.1.12. Capabilities List - +GCAP

+GCAP - Capabilities List		SELINT 0 / 1 / 2
AT+GCAP	Execution command returns the equipment supported command set list. Where: +CGSM: GSM ETSI command set +FCLASS: Fax command set +DS: Data Service common modem command set +MS: Mobile Specific command set	
Reference	V.25ter	

### 3.5.3.1.13. Serial Number - +GSN

+GSN - Serial Number		SELINT 0 / 1 / 2
AT+GSN	Execution command returns the device board serial number.	
	Note: The number returned is not the IMSI, it is only the board number	
Reference	V.25ter	

### 3.5.3.1.14. Display Configuration And Profile - &V

&V - Display Current Base Configuration And Profile		SELINT 0 / 1 / 2
AT&V	Execution command returns some of the base configuration parameters settings.  Note: this is one of the commands whose output differs depending on the last #SELINT setting.  Note: the row of information about CTS (C106) OPTIONS is in the output of &V only for compatibility reasons and represents only a dummy value.	

### 3.5.3.1.15. Display Configuration And Profile - &V0

&V0 - Display Current Configuration And Profile		SELINT 0 / 1 / 2
AT&V0	<p>Execution command returns all the configuration parameters settings.</p> <p>Note: this command is the same as <b>&amp;V</b>, it is included only for backwards compatibility.</p> <p>Note: this is one of the commands whose output differs depending on the last <b>#SELINT</b> setting.</p> <p>Note: the row of information about <b>CTS (C106) OPTIONS</b> is in the output of <b>&amp;V0</b> only for compatibility reasons and represents only a dummy value.</p>	

### 3.5.3.1.16. S Registers Display - &V1

&V1 - S Registers Display		SELINT 0 / 1 / 2												
AT&V1	<p>Execution command returns the value of the <b>S</b> registers in decimal and hexadecimal value in the format:</p> <table style="margin-left: 40px;"> <tr> <td><b>REG</b></td> <td><b>DEC</b></td> <td><b>HEX</b></td> </tr> <tr> <td>&lt;reg0&gt;</td> <td>&lt;dec&gt;</td> <td>&lt;hex&gt;</td> </tr> <tr> <td>&lt;reg1&gt;</td> <td>&lt;dec&gt;</td> <td>&lt;hex&gt;</td> </tr> <tr> <td>...</td> <td></td> <td></td> </tr> </table> <p>where</p> <p>&lt;regn&gt; - <b>S</b> register number</p> <ul style="list-style-type: none"> <li>000..005</li> <li>007</li> <li>012</li> <li>025</li> <li>038</li> </ul> <p>&lt;dec&gt; - current value in decimal notation</p> <p>&lt;hex&gt; - current value in hexadecimal notation</p>	<b>REG</b>	<b>DEC</b>	<b>HEX</b>	<reg0>	<dec>	<hex>	<reg1>	<dec>	<hex>	...			
<b>REG</b>	<b>DEC</b>	<b>HEX</b>												
<reg0>	<dec>	<hex>												
<reg1>	<dec>	<hex>												
...														

### 3.5.3.1.17. Extended S Registers Display - &V3

&V3 - Extended S Registers Display		SELINT 0 / 1 / 2												
AT&V3	<p>Execution command returns the value of the <b>S</b> registers in decimal and hexadecimal value in the format:</p> <table style="margin-left: 40px;"> <tr> <td><b>REG</b></td> <td><b>DEC</b></td> <td><b>HEX</b></td> </tr> <tr> <td>&lt;reg0&gt;</td> <td>&lt;dec&gt;</td> <td>&lt;hex&gt;</td> </tr> <tr> <td>&lt;reg1&gt;</td> <td>&lt;dec&gt;</td> <td>&lt;hex&gt;</td> </tr> <tr> <td>...</td> <td></td> <td></td> </tr> </table> <p>where</p> <p>&lt;regn&gt; - <b>S</b> register number</p> <ul style="list-style-type: none"> <li>000..005</li> <li>007</li> </ul>	<b>REG</b>	<b>DEC</b>	<b>HEX</b>	<reg0>	<dec>	<hex>	<reg1>	<dec>	<hex>	...			
<b>REG</b>	<b>DEC</b>	<b>HEX</b>												
<reg0>	<dec>	<hex>												
<reg1>	<dec>	<hex>												
...														

<b>&amp;V3 - Extended S Registers Display</b>		<b>SELINT 0 / 1 / 2</b>
	012 025 030 038 <b>&lt;dec&gt;</b> - current value in decimal notation <b>&lt;hex&gt;</b> - current value in hexadecimal notation	

### 3.5.3.1.18. Display Last Connection Statistics - &V2

<b>&amp;V2 - Display Last Connection Statistics</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT&amp;V2</b>	Execution command returns the last connection statistics & connection failure reason.	

### 3.5.3.1.19. Single Line Connect Message - |V

<b> V - Single Line Connect Message</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT V&lt;n&gt;</b>	Execution command set single line connect message.  Parameter: <b>&lt;n&gt;</b> 0 - off 1 - on	

### 3.5.3.1.20. Country Of Installation - +GCI

<b>+GCI - Country Of Installation</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+GCI=&lt;code&gt;</b>	Set command selects the installation country code according to ITU-T.35 Annex A.	
	Parameter: <b>&lt;code&gt;</b> 59 - it currently supports only the Italy country code	
<b>AT+GCI?</b>	Read command reports the currently selected country code.	
<b>AT+GCI=?</b>	Test command reports the supported country codes.	
Reference	V25ter.	

### 3.5.3.1.21. Line Signal Level - %L

<b>%L - Line Signal Level</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT%L</b>	It has no effect and is included only for backward compatibility with landline modems	

### 3.5.3.1.22. Line Quality - %Q

%Q - Line Quality		SELINT 0 / 1 / 2
AT%Q	It has no effect and is included only for backward compatibility with landline modems	

### 3.5.3.1.23. Speaker Loudness - L

L - Speaker Loudness		SELINT 0 / 1 / 2
ATL<n>	It has no effect and is included only for backward compatibility with landline modems	

### 3.5.3.1.24. Speaker Mode - M

M - Speaker Mode		SELINT 0 / 1 / 2
ATM<n>	It has no effect and is included only for backward compatibility with landline modems	

### 3.5.3.1.25. Master Reset - +CMAR

+CMAR – Master Reset		SELINT 0 / 1
AT+CMAR=< phone lock code>	This command requests the MT to reset user data. The user data in the phone will be reset to default values.  Parameters: < phone lock code> - string type representing an 8 digits security code. It must be verified before performing the master reset.  Note: issuing the command will cause an NVM formatting. After the formatting is completed the module will automatically reboot. It is strongly recommended to issue an AT+CFUN=4 command before starting to format NVM, in order to not interfere with the formatting process.  Note: the command is available for SELINT 0 and 1 only in 10.00.xx3 release and onwards.	
AT+CMAR=?	Test command tests for command existence.	

+CMAR – Master Reset		SELINT 2
AT+CMAR=< phone lock code>	This command requests the MT to reset user data. The user data in the phone will be reset to default values.  Parameters:	

	<p>&lt; phone lock code&gt; - string type representing an 8 digits security code. It must be verified before performing the master reset.</p> <p>Note: issuing the command will cause an NVM formatting. After the formatting is completed the module will automatically reboot. It is strongly recommended to issue an AT+CFUN=4 command before starting to format NVM, in order to not interfere with the formatting process.</p>
AT+CMAR=?	Test command tests for command existence.

### 3.5.3.2. DTE - Modem Interface Control

#### 3.5.3.2.1. Command Echo - E

<b>E - Command Echo</b>		<b>SELINT 0 / 1 / 2</b>
ATE[<n>]	<p>Set command enables/disables the command echo.</p> <p>Parameter:</p> <p>&lt;n&gt;</p> <p>0 - disables command echo 1 - enables command echo (factory default) , hence command sent to the device are echoed back to the <b>DTE</b> before the response is given.</p>	
Note: if parameter is omitted, the command has the same behaviour of <b>ATE0</b>		
Reference	V25ter	

#### 3.5.3.2.2. Quiet Result Codes - Q

<b>Q - Quiet Result Codes</b>		<b>SELINT 0 / 1</b>
ATQ[<n>]	<p>Set command enables or disables the result codes.</p> <p>Parameter:</p> <p>&lt;n&gt;</p> <p>0 - enables result codes (factory default) 1 - every result code is replaced with a &lt;CR&gt; 2 - disables result codes</p>	
Note: After issuing either <b>ATQ1</b> or <b>ATQ2</b> every information text transmitted in response to commands is not affected		
Note: if parameter is omitted, the command has the same behaviour as <b>ATQ0</b>		
Example	<p>After issuing <b>ATQ1</b></p> <p>AT+CGACT=? <b>+CGACT: (0-1) a &lt;cr&gt; ends the response</b></p>	

<b>Q - Quiet Result Codes</b>	<b>SELINT 0 / 1</b>
	After issuing ATQ2  AT+CGACT=? <b>+CGACT: (0-1) nothing is appended to the response</b>
Reference	V25ter
<b>Q - Quiet Result Codes</b>	<b>SELINT 2</b>
ATQ[<n>]	<p>Set command enables or disables the result codes.</p> <p>Parameter:</p> <p>&lt;n&gt;</p> <p>0 - enables result codes (factory default)      1 - disables result codes      2 - disables result codes (only for backward compatibility)</p> <p>Note: After issuing either <b>ATQ1</b> or <b>ATQ2</b> every information text transmitted in response to commands is not affected</p> <p>Note: if parameter is omitted, the command has the same behaviour of <b>ATQ0</b></p>
Example	<p>After issuing <b>ATQ1</b> or <b>ATQ2</b></p> <p>AT+CGACT=? <b>+CGACT: (0-1) nothing is appended to the response</b></p>
Reference	V25ter

### 3.5.3.2.3. Response Format - V

<b>V - Response Format</b>	<b>SELINT 0 / 1 / 2</b>				
ATV[<n>]	<p>Set command determines the contents of the header and trailer transmitted with result codes and information responses. It also determines if result codes are transmitted in a numeric form or an alphanumeric form (see [§3.2.3 Information Responses And Result Codes] for the table of result codes).</p> <p>Parameter:</p> <p>&lt;n&gt;</p> <p>0 - limited headers and trailers and numeric format of result codes</p> <table border="1" style="margin-left: 20px;"> <tr> <td>information responses</td> <td>&lt;text&gt;&lt;CR&gt;&lt;LF&gt;</td> </tr> <tr> <td>result codes</td> <td>&lt;numeric code&gt;&lt;CR&gt;</td> </tr> </table> <p>1 - full headers and trailers and verbose format of result codes (factory default)</p>	information responses	<text><CR><LF>	result codes	<numeric code><CR>
information responses	<text><CR><LF>				
result codes	<numeric code><CR>				

<b>V - Response Format</b>		<b>SELINT 0 / 1 / 2</b>
	information responses	<CR><LF> <text><CR><LF>
	result codes	<CR><LF> <verbose code><CR><LF>
		Note: the <text> portion of information responses is not affected by this setting.
		Note: if parameter is omitted, the command has the same behaviour of ATV0
Reference	V25ter	

### 3.5.3.2.4. Extended Result Codes - X

<b>X - Extended Result Codes</b>		<b>SELINT 0 / 1 / 2</b>
ATX[<n>]	Set command selects the result code messages subset used by the modem to inform the <b>DTE</b> of the result of the commands.  Parameter: <n> - (factory default is 1) 0 - on entering dial-mode <b>CONNECT</b> result code is given; <b>OK</b> , <b>CONNECT</b> , <b>RING</b> , <b>NO CARRIER</b> , <b>ERROR</b> , <b>NO ANSWER</b> result codes are enabled . Dial tone and busy detection ( <b>NO DIALTONE</b> and <b>BUSY</b> result codes) are disabled. 1..4 - on entering dial-mode <b>CONNECT</b> <text> result code is given; all the other result codes are enabled.	
		Note: If parameter is omitted, the command has the same behaviour of <b>ATX0</b>
Note	For complete control on <b>CONNECT</b> response message see also +DR command.	
Reference	V25ter	

### 3.5.3.2.5. Identification Information - I

<b>I - Identification Information</b>		<b>SELINT 0 / 1 / 2</b>
ATI[<n>]	Execution command returns one or more lines of information text followed by a result code.  Parameter: <n> 0 - numerical identifier 1 - module checksum 2 - checksum check result 3 - manufacturer 4 - product name 5 - DOB version	

<b>I - Identification Information</b>		<b>SELINT 0 / 1 / 2</b>
Note: this is one of the commands whose output differs depending on the last #SELINT setting.		
Reference	Note: if parameter is omitted, the command has the same behaviour of <b>ATI0</b> V25ter	

### 3.5.3.2.6. Data Carrier Detect (DCD) Control - &C

<b>&amp;C - Data Carrier Detect (DCD) Control</b>		<b>SELINT 0 / 1 / 2</b>
AT&C[<n>]	Set command controls the RS232 <b>DCD</b> output behaviour.  Parameter: <n> 0 - <b>DCD</b> remains <b>high</b> always. 1 - <b>DCD</b> follows the Carrier detect status: if carrier is detected <b>DCD</b> is high, otherwise <b>DCD</b> is <b>low</b> . (factory default) 2 - <b>DCD off</b> while disconnecting	
Reference	Note: if parameter is omitted, the command has the same behaviour of <b>AT&amp;C0</b> V25ter	

### 3.5.3.2.7. Data Terminal Ready (DTR) Control - &D

<b>&amp;D - Data Terminal Ready (DTR) Control</b>		<b>SELINT 0 / 1</b>
AT&D[<n>]	Set command controls the Module behaviour to the RS232 <b>DTR</b> transitions.  Parameter: <n> 0 - device ignores <b>DTR</b> transitions (factory default) 1 - when the MODULE is connected, the <b>High</b> to <b>Low</b> transition of <b>DTR</b> pin sets the device in command mode, the current connection is NOT closed 2 - when the MODULE is connected, the <b>High</b> to <b>Low</b> transition of <b>DTR</b> pin sets the device in command mode and the current connection is closed 3 - device ignores <b>DTR</b> transitions 4 - <b>C108/1</b> operation is disabled 5 - <b>C108/1</b> operation is enabled; same behaviour as for <n>=2  Note: if a connection has been set up issuing either #SKTD or #SKTOP, then <b>AT&amp;D1</b> has the same effect as <b>AT&amp;D2</b> .  Note: if <b>AT&amp;D2</b> has been issued and the <b>DTR</b> has been tied <b>low</b> , autoanswering is inhibited and it is possible to answer only issuing command <b>ATA</b> . Note: if parameter is omitted, the command has the same behaviour as <b>AT&amp;D0</b>	

<b>&amp;D - Data Terminal Ready (DTR) Control</b>		<b>SELINT 2</b>
<b>AT&amp;D[&lt;n&gt;]</b>	<p>Set command controls the Module behaviour to the RS232 <b>DTR</b> transitions.</p> <p>Parameter:  <b>&lt;n&gt;</b></p> <ul style="list-style-type: none"> <li>0 - device ignores <b>DTR</b> transitions (factory default); if +CVHU current setting is <b>different from 2</b> then every setting <b>AT&amp;D0</b> is equivalent to <b>AT&amp;D5</b></li> <li>1 - when the MODULE is connected, the <b>High</b> to <b>Low</b> transition of <b>DTR</b> pin sets the device in command mode, the current connection is NOT closed; if +CVHU current setting is <b>different from 2</b> then issuing <b>AT&amp;D1</b> is equivalent to <b>AT&amp;D5</b></li> <li>2 - when the MODULE is connected , the <b>High</b> to <b>Low</b> transition of <b>DTR</b> pin sets the device in command mode and the current connection is closed; if +CVHU current setting is <b>different from 2</b> then issuing <b>AT&amp;D2</b> is equivalent to <b>AT&amp;D5</b></li> <li>3 - device ignores <b>DTR</b> transitions; if +CVHU current setting is <b>different from 2</b> then issuing <b>AT&amp;D3</b> is equivalent to <b>AT&amp;D5</b></li> <li>4 - <b>C108/1</b> operation is disabled; if +CVHU current setting is <b>different from 2</b> then issuing <b>AT&amp;D4</b> is equivalent to <b>AT&amp;D5</b></li> <li>5 - <b>C108/1</b> operation is enabled; same behaviour as for <b>&lt;n&gt;=2</b></li> </ul> <p>Note: if a connection has been set up issuing either <b>#SKTD</b> or <b>#SKTOP</b>, then <b>AT&amp;D1</b> has the same effect as <b>AT&amp;D2</b>. If a connection has been set up issuing <b>AT#SD</b> then <b>AT&amp;D1</b> and <b>AT&amp;D2</b> have different effect, as described above.</p> <p>Note: if <b>AT&amp;D2</b> has been issued and the <b>DTR</b> has been tied <b>Low</b>, autoanswering is inhibited and it is possible to answer only issuing command <b>ATA</b>.</p> <p>Note: if parameter is omitted, the command has the same behaviour of <b>AT&amp;D0</b></p>	
Reference	V25ter	

### 3.5.3.2.8. Standard Flow Control - \Q

<b>\Q - Standard Flow Control</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT\Q[&lt;n&gt;]</b>	<p>Set command controls the RS232 flow control behaviour.</p> <p>Parameter:  <b>&lt;n&gt;</b></p> <ul style="list-style-type: none"> <li>0 - no flow control</li> <li>1 - software bi-directional with filtering (<b>XON/XOFF</b>)</li> <li>2 - hardware mono-directional flow control (only <b>CTS</b> active)</li> <li>3 - hardware bi-directional flow control (both <b>RTS/CTS</b> active) (factory default)</li> </ul> <p>Note: if parameter is omitted, the command has the same behaviour as <b>AT\Q0</b></p>	

\Q - Standard Flow Control	SELINT 0 / 1 / 2
	<p>Note: Hardware flow control (<b>AT\Q3</b>) is not active in command mode.</p> <p>Note: \Q's settings are functionally a subset of &amp;K's ones.</p>
Reference	V25ter

### 3.5.3.2.9. Flow Control - &K

&K - Flow Control	SELINT 0 / 1 / 2
<b>AT&amp;K[&lt;n&gt;]</b> Set command controls the RS232 flow control behaviour. Parameter: <b>&lt;n&gt;</b> 0 - no flow control 1 - hardware mono-directional flow control (only <b>CTS</b> active) 2 - software mono-directional flow control ( <b>XON/XOFF</b> ) 3 - hardware bi-directional flow control (both <b>RTS/CTS</b> active) (factory default) 4 - software bi-directional with filtering ( <b>XON/XOFF</b> ) 5 - pass through: software bi-directional without filtering ( <b>XON/XOFF</b> ) 6 - both hardware bi-directional flow control (both <b>RTS/CTS</b> active) and software bi-directional flow control ( <b>XON/XOFF</b> ) with filtering  Note: if parameter is omitted, the command has the same behaviour as <b>AT&amp;K0</b>  Note: <b>&amp;K</b> has no Read Command. To verify the current setting of <b>&amp;K</b> , simply check the settings of the active profile issuing <b>AT&amp;V</b> .  Note: Hardware flow control ( <b>AT&amp;K3</b> ) is not active in command mode.	SELINT 0 / 1 / 2

### 3.5.3.2.10. Data Set Ready (DSR) Control - &S

&S - Data Set Ready (DSR) Control	SELINT 0 / 1 / 2
<b>AT&amp;S[&lt;n&gt;]</b> Set command controls the RS232 <b>DSR</b> pin behaviour. Parameter: <b>&lt;n&gt;</b> 0 - always <b>High</b> 1 - follows the GSM traffic channel indication. 2 - <b>High</b> when connected 3 - <b>High</b> when device is ready to receive commands (factory default).  Note: if option 1 is selected then <b>DSR</b> is tied <b>High</b> when the device receives from the network the GSM traffic channel indication.  Note: in power saving mode the <b>DSR</b> pin is always tied <b>Low</b> .	SELINT 0 / 1 / 2

&S - Data Set Ready (DSR) Control	SELINT 0 / 1 / 2
	<p>Note: if parameter is omitted, the command has the same behaviour of <b>AT&amp;S0</b></p> <p>Note: If Selint=2 is selected, and option 1 and 2 are active, <b>DSR</b> will not tied <b>High</b> in case of GSM voice connection</p>

### 3.5.3.2.11. Ring (RI) Control - \R

\R - Ring (RI) Control	SELINT 0 / 1 / 2
<b>AT\R[n]</b> Set command controls the <b>RING</b> output pin behaviour. Parameter: <b>&lt;n&gt;</b> 0 - <b>RING</b> on during ringing and further connection 1 - <b>RING</b> on during ringing (factory default) 2 - <b>RING</b> follows the ring signal  Note: to check the ring option status use the <b>&amp;V</b> command.  Note: if parameter is omitted, the command has the same behaviour of <b>AT\R0</b>	SELINT 0 / 1 / 2

### 3.5.3.2.12. Fixed DTE Interface Rate - +IPR

+IPR - Fixed DTE Interface Rate	SELINT 0 / 1
<b>AT+IPR=&lt;rate&gt;</b> Set command specifies the <b>DTE</b> speed at which the device accepts commands during command mode operations; it may be used to fix the <b>DTE-DCE</b> interface speed. Parameter: <b>&lt;rate&gt;</b> 0 ..300 1200 2400 4800 9600 19200 38400 57600 115200  If <b>&lt;rate&gt;</b> is set to 0, then automatic speed detection is enabled and also character format (see <b>+ICF</b> ) is set to auto-detect. (default) If <b>&lt;rate&gt;</b> is specified and not 0, <b>DTE-DCE</b> speed is fixed at that speed, hence no speed auto-detection (autobauding) is enabled.	SELINT 0 / 1

<b>+IPR - Fixed DTE Interface Rate</b>		<b>SELINT 0 / 1</b>
	Note: While in autobauding mode the 300 baud rate is not supported.	
<b>AT+IPR?</b>	Read command returns the current value of <b>+IPR</b> parameter.	
<b>AT+IPR=?</b>	Test command returns the supported serial port speed list.	
Reference	V25ter	

<b>+IPR - Fixed DTE Interface Rate</b>		<b>SELINT 2</b>
<b>AT+IPR=&lt;rate&gt;</b>	<p>Set command specifies the <b>DTE</b> speed at which the device accepts commands during command mode operations; it may be used to fix the <b>DTE-DCE</b> interface speed.</p> <p>Parameter:  <b>&lt;rate&gt;</b></p> <ul style="list-style-type: none"> <li>0 (default; not supported for 13.00.xxx SW version)</li> <li>..300</li> <li>1200</li> <li>2400</li> <li>4800</li> <li>9600</li> <li>19200</li> <li>38400</li> <li>57600</li> <li>115200 (default for 13.00.xxx SW version)</li> <li>230400 (supported only for 13.00.xxx SW version, starting from 13.00.xx2)</li> <li>460800 (supported only for 13.00.xxx SW version, starting from 13.00.xx2)</li> <li>921600 (supported only for 13.00.xxx SW version, starting from 13.00.xx2)</li> </ul> <p>If <b>&lt;rate&gt;</b> is set to 0, then automatic speed detection is enabled and also character format (see <b>+ICF</b>) is set to auto-detect. (default)</p> <p>If <b>&lt;rate&gt;</b> is specified and not 0, <b>DTE-DCE</b> speed is fixed at that speed, hence no speed auto-detection (autobauding) is enabled.</p> <p>Note: While in autobauding mode the 300 baud rate is not supported.</p>	
<b>AT+IPR?</b>	Read command returns the current value of <b>+IPR</b> parameter.	
<b>AT+IPR=?</b>	<p>Test command returns the list of supported autodetectable <b>&lt;rate&gt;</b> values and the list of fixed-only <b>&lt;rate&gt;</b> values in the format:</p> <p><b>+IPR:(list of supported autodetectable &lt;rate&gt; values), (list of fixed-only &lt;rate&gt; values)</b></p> <p>In 13.00.xxx SW version test command returns the list of fixed-only <b>&lt;rate&gt;</b> values in the format:</p> <p><b>+IPR: (list of fixed-only &lt;rate&gt; values)</b></p>	
Reference	V25ter	

### 3.5.3.2.13. DTE-Modem Local Flow Control - +IFC

<b>+IFC - DTE-Modem Local Flow Control</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+IFC=&lt;by_te&gt;, &lt;by_ta&gt;</b>	Set command selects the flow control behaviour of the serial port in both directions: from <b>DTE</b> to <b>modem</b> (<by_ta> option) and from <b>modem</b> to <b>DTE</b> (<by_te>)	
	Parameters: <b>&lt;by_te&gt;</b> - flow control option for the data received by <b>DTE</b> 0 - flow control None 1 - <b>XON/XOFF</b> filtered 2 - <b>C105 (RTS)</b> (factory default) 3 - <b>XON/XOFF</b> not filtered <b>&lt;by_ta&gt;</b> - flow control option for the data sent by <b>modem</b> 0 - flow control None 1 - <b>XON/XOFF</b> 2 - <b>C106 (CTS)</b> (factory default)	
		Note: Hardware flow control ( <b>AT+IFC=2,2</b> ) is not active in command mode.
		Note: This command is equivalent to <b>&amp;K</b> command.
<b>AT+IFC?</b>	Read command returns active flow control settings.	
		Note: If flow control behavior has been set with <b>AT&amp;Kn</b> command with the parameter that is not allowed by <b>AT+IFC</b> the read command <b>AT+IFC?</b> will return:
		<b>+IFC: 0,0</b>
<b>AT+IFC=?</b>	Test command returns all supported values of the parameters <b>&lt;by_te&gt;</b> and <b>&lt;by_ta&gt;</b> .	
Reference	V25ter	

### 3.5.3.2.14. DTE-Modem Local Rate Reporting - +ILRR

<b>+ILRR - DTE-Modem Local Rate Reporting</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+ILRR=&lt;n&gt;</b>	Set command controls whether or not the <b>+ILRR: &lt;rate&gt;</b> information text is transmitted from the <b>modem</b> (module) to the <b>DTE</b> .  Parameter: <b>&lt;n&gt;</b> 0 - local port speed rate reporting disabled (factory default) 1 - local port speed rate reporting enabled	
		Note: If <b>AT+IPR=0</b> (in autobauding) local port speed reported will be 0.
		Note: this information if enabled is sent upon connection.
<b>AT+ILRR?</b>	Read command returns active setting of <b>&lt;n&gt;</b> .	
<b>AT+ILRR=?</b>	Test command returns all supported values of the parameter <b>&lt;n&gt;</b>	
Reference	V25ter	

### 3.5.3.2.15. DTE-Modem Character Framing - +ICF

+ICF - DTE-Modem Character Framing		SELINT 0 / 1 / 2
<b>AT+ICF=&lt;format&gt; [,&lt;parity&gt;]</b>	<p>Set command defines the asynchronous character framing to be used when autobauding is disabled.</p> <p>Parameters:</p> <p>&lt;<b>format</b>&gt; - determines the number of bits in the data bits, the presence of a parity bit, and the number of stop bits in the start-stop frame.</p> <ul style="list-style-type: none"> <li>0 – autodetection (not available for GE910-QUAD and GE910-GNSS)</li> <li>1 - 8 Data, 2 Stop</li> <li>2 - 8 Data, 1 Parity, 1 Stop</li> <li>3 - 8 Data, 1 Stop</li> <li>5 - 7 Data, 1 Parity, 1 Stop</li> </ul> <p>&lt;<b>parity</b>&gt; - determines how the parity bit is generated and checked, if present; setting this subparameter is mandatory and has a meaning only if &lt;<b>format</b>&gt; subparameter is either 2 or 5 (for GE910-QUAD and GE910-GNSS meaningless &lt;<b>format</b>&gt; values are not allowed).</p> <ul style="list-style-type: none"> <li>0 - Odd</li> <li>1 - Even</li> </ul>	
<b>AT+ICF?</b>	Read command returns current settings for subparameters < <b>format</b> > and < <b>parity</b> >. If current setting of subparameter < <b>format</b> > is neither 2 nor 5, the current setting of subparameter < <b>parity</b> > will always represented as 0.	
<b>AT+ICF=?</b>	Test command returns the ranges of values for the parameters < <b>format</b> > and < <b>parity</b> >	
Reference	V25ter	
Example	<p><i>Auto detect</i>            AT+ICF = 0            OK</p> <p><i>8N2</i>            AT+ICF = 1            OK</p> <p><i>8O1</i>            AT+ICF = 2,0            OK</p> <p><i>8E1</i>            AT+ICF = 2,1            OK</p>	

<b>+ICF - DTE-Modem Character Framing</b>		<b>SELINT 0 / 1 / 2</b>
	8N1 AT+ICF = 3 OK	
	7O1 AT+ICF = 5,0 OK	
	7E1 AT+ICF = 5,1 OK	

### 3.5.3.3. Call Control

#### 3.5.3.3.1. Dial - D

<b>D – Dial</b>		<b>SELINT 0 / 1</b>
<b>ATD&lt;number&gt;[;]</b>	<p>Execution command starts a call to the phone number given as parameter. If “;” is present, a VOICE call to the given number is performed, regardless of the current value of the connection mode set by <b>+FCLASS</b> command.</p> <p>Parameter: <b>&lt;number&gt;</b> - phone number to be dialed</p> <p>Note: type of call (data, fax or voice) depends on last <b>+FCLASS</b> setting.</p> <p>Note: the numbers accepted are 0-9 and *,#,”A”, ”B”, ”C”, ”D”, ”+”.</p> <p>Note: for backwards compatibility with landline modems modifiers “T”, ”P”, ”R”, ””, ”W”, ”!”, ”@” are accepted but have no effect.</p>	
<b>ATD&gt;&lt;str&gt;[;]</b>	<p>Issues a call to phone number which corresponding alphanumeric field is <b>&lt;str&gt;</b>; all available memories will be searched for the correct entry.</p> <p>If “;” is present a <b>voice</b> call is performed.</p> <p>Parameter: <b>&lt;str&gt;</b> - alphanumeric field corresponding to phone number; it must be enclosed in quotation marks.</p> <p>Note: parameter <b>&lt;str&gt;</b> is case sensitive.</p> <p>Note: used character set should be the one selected with command Select TE character set <b>+CSCS</b>.</p>	
<b>ATD&gt;&lt;mem&gt;&lt;n&gt;[;]</b>	Issues a call to phone number in phonebook memory storage <b>&lt;mem&gt;</b> , entry location <b>&lt;n&gt;</b> (available memories may be queried with <b>AT+CPBS=?</b> ).	

D – Dial	SELINT 0 / 1
	<p>If “;” is present a <b>voice</b> call is performed.</p> <p>Parameters:</p> <p>&lt;<b>mem</b>&gt; - phonebook memory storage          SM - SIM phonebook          FD - SIM fixed dialling-phonebook          LD - SIM last-dialling-phonebook          MC - device missed (unanswered received) calls list          RC - ME received calls list</p> <p>&lt;<b>n</b>&gt; - entry location; it should be in the range of locations available in the memory used.</p>
<b>ATD&gt;&lt;n&gt;[;]</b>	<p>Issues a call to phone number in entry location &lt;<b>n</b>&gt; of the active phonebook memory storage (see <b>+CPBS</b>).</p> <p>If “;” is present a <b>voice</b> call is performed.</p> <p>Parameter:</p> <p>&lt;<b>n</b>&gt; - active phonebook memory storage entry location; it should be in the range of locations available in the active phonebook memory storage.</p>
<b>ATDL</b>	<p>Issues a call to the last number dialed.</p>
<b>ATDS=&lt;nr&gt;[;]</b>	<p>Issues a call to the number stored in the MODULE internal phonebook position number &lt;<b>nr</b>&gt;.</p> <p>If “;” is present a VOICE call is performed.</p> <p>Parameter:</p> <p>&lt;<b>nr</b>&gt; - internal phonebook position to be called (See either <b>&amp;N</b> and <b>&amp;Z</b>)</p>
<b>ATD&lt;number&gt;I[;]</b> <b>ATD&lt;number&gt;i[;]</b>	<p>Issues a call overwriting the CLIR supplementary service subscription default value for this call</p> <p>If “;” is present a VOICE call is performed.</p> <p><b>I</b> - invocation, restrict CLI presentation  <b>i</b> - suppression, allow CLI presentation</p>
<b>ATD&lt;number&gt;G[;]</b> <b>ATD&lt;number&gt;g[;]</b>	<p>Issues a call checking the CUG supplementary service information for the current call. Refer to <b>+CCUG</b> command.</p> <p>If “;” is present a VOICE call is performed.</p>
<b>ATD*&lt;gprs_sc&gt;[*&lt;addr&gt;][*]&lt;L2P&gt;[*&lt;cid&gt;]]#</b>	<p>This command is specific of GPRS functionality and causes the MT to perform whatever actions are necessary to establish communication between the TE and the external PDN.</p> <p>Parameters:</p> <p>&lt;<b>gprs_sc</b>&gt; - GPRS Service Code, a digit string (value 99) which identifies a request to use the GPRS</p> <p>&lt;<b>addr</b>&gt; - string that identifies the called party in the address space applicable to the PDP.</p> <p>&lt;<b>L2P</b>&gt; - a string which indicates the layer 2 protocol to be used (see <b>+CGDATA</b> command). For communications software that does not support</p>

<b>D – Dial</b>		<b>SELINT 0 / 1</b>
	arbitrary characters in the dial string, the following numeric equivalents shall be used: 1 - PPP <cid> - a digit which specifies a particular PDP context definition (see +CGDCONT command).	
Example	<p><i>To dial a number in SIM phonebook entry 6:</i>  ATD&gt;SM6  OK</p> <p><i>To have a voice call to the 6-th entry of active phonebook:</i>  ATD&gt;6;  OK</p> <p><i>To call the entry with alphanumeric field “Name”:</i>  ATD&gt;”Name”;  OK</p>	
Reference	V25ter.	

<b>D – Dial</b>		<b>SELINT 2</b>
<b>ATD&lt;number&gt;[;]</b>	Execution command starts a call to the phone number given as parameter. If “;” is present, a <b>voice</b> call to the given number is performed, regardless of the current value of the connection mode set by +FCLASS command. <p>Parameter:  &lt;number&gt; - phone number to be dialed</p> <p>Note: type of call (<b>data</b>, <b>fax</b> or <b>voice</b>) depends on last +FCLASS setting.</p> <p>Note: the numbers accepted are 0-9 and *,#,”A”, ”B”, ”C”, ”D”,”+”.</p> <p>Note: for backwards compatibility with landline modems modifiers “T”, “P”, “R”, “”, “W”, “!”, “@” are accepted but have no effect.</p>	
<b>ATD&gt;&lt;str&gt;[;]</b>	Issues a call to phone number which corresponding alphanumeric field is <str>; all available memories will be searched for the correct entry. <p>If “;” is present a <b>voice</b> call is performed.</p> <p>Parameter:  &lt;str&gt; - alphanumeric field corresponding to phone number; it must be enclosed in quotation marks.</p> <p>Note: parameter &lt;str&gt; is case sensitive.</p> <p>Note: used character set should be the one selected with +CSCS.</p>	
<b>ATD&gt;&lt;mem&gt;&lt;n&gt;[;]</b>	Issues a call to phone number in phonebook memory storage <mem>, entry location <n> (available memories may be queried with AT+CPBS=?).	

D – Dial	SELINT 2
	<p>If “;” is present a <b>voice</b> call is performed.</p> <p>Parameters:</p> <p>&lt;<b>mem</b>&gt; - phonebook memory storage          SM - SIM phonebook          FD - SIM fixed dialling-phonebook          LD - SIM last-dialling-phonebook          MC - device missed (unanswered received) calls list          RC - ME received calls list          MB - mailbox numbers stored on SIM, if this service is provided by the SIM (see <b>#MBN</b>).  &lt;<b>n</b>&gt; - entry location; it should be in the range of locations available in the memory used.</p>
<b>ATD&gt;&lt;n&gt;[;]</b>	<p>Issues a call to phone number in entry location &lt;<b>n</b>&gt; of the active phonebook memory storage (see <b>+CPBS</b>).</p> <p>If “;” is present a <b>voice</b> call is performed.</p> <p>Parameter:</p> <p>&lt;<b>n</b>&gt; - active phonebook memory storage entry location; it should be in the range of locations available in the active phonebook memory storage.</p>
<b>ATDL</b>	Issues a call to the last number dialed.
<b>ATDS=&lt;nr&gt;[;]</b>	<p>Issues a call to the number stored in the MODULE internal phonebook position number &lt;<b>nr</b>&gt;.</p> <p>If “;” is present a <b>voice</b> call is performed.</p> <p>Parameter:</p> <p>&lt;<b>nr</b>&gt; - internal phonebook position to be called (See commands <b>&amp;N</b> and <b>&amp;Z</b>)</p>
<b>ATD&lt;number&gt;I[;] ATD&lt;number&gt;i[;]</b>	<p>Issues a call overwriting the CLIR supplementary service subscription default value for this call</p> <p>If “;” is present a <b>voice</b> call is performed.</p> <p><b>I</b> - invocation, restrict CLI presentation  <b>i</b> - suppression, allow CLI presentation</p>
<b>ATD&lt;number&gt;G[;] ATD&lt;number&gt;g[;]</b>	<p>Issues a call checking the CUG supplementary service information for the current call. Refer to <b>+CCUG</b> command.</p> <p>If “;” is present a <b>voice</b> call is performed.</p>
<b>ATD*&lt;gprs_sc&gt;[*&lt;addr&gt;][*[&lt;L2P&gt;][*[&lt;cid&gt;]]]]#</b>	<p>This command is specific of GPRS functionality and causes the <b>MT</b> to perform whatever actions are necessary to establish communication between the <b>TE</b> and the external PDN.</p> <p>Parameters:</p> <p>&lt;<b>gprs_sc</b>&gt; - GPRS Service Code, a digit string (value 99) which identifies a request to use the GPRS          &lt;<b>addr</b>&gt; - string that identifies the called party in the address space applicable to the PDP.          &lt;<b>L2P</b>&gt; - a string which indicates the layer 2 protocol to be used (see <b>+CGDATA</b></p>

D - Dial	SELINT 2
	<p>command). For communications software that does not support arbitrary characters in the dial string, the following numeric equivalents shall be used:</p> <p>1 - PPP  <b>&lt;cid&gt;</b> - a digit which specifies a particular <b>PDP</b> context definition (see <b>+CGDCONT</b> command).</p>
Example	<p><i>To dial a number in SIM phonebook entry 6:</i>  ATD&gt;SM6  OK</p> <p><i>To have a voice call to the 6-th entry of active phonebook:</i>  ATD&gt;6;  OK</p> <p><i>To call the entry with alphanumeric field “Name”:</i>  ATD&gt;”Name”;  OK</p>
Reference	V25ter.

### 3.5.3.3.2. Tone Dial - T

T - Tone Dial	SELINT 0 / 1 / 2
ATT	Set command has no effect is included only for backward compatibility with landline modems.
Reference	V25ter.

### 3.5.3.3.3. Pulse Dial - P

P - Pulse Dial	SELINT 0 / 1 / 2
ATP	Set command has no effect is included only for backward compatibility with landline modems.
Reference	V25ter.

### 3.5.3.3.4. Answer - A

A - Answer	SELINT 0 / 1 / 2
ATA	<p>Execution command is used to answer to an incoming call if automatic answer is disabled.</p> <p>Note: This command MUST be the last in the command line and must be followed immediately by a &lt;CR&gt; character.</p>

### 3.5.3.3.5. Disconnect - H

<b>H - Disconnect</b>		<b>SELINT 0 / 1 / 2</b>
ATH	<p>Execution command is used to close the current conversation (voice, data or fax).</p> <p>Note: this command can be issued only in command mode; when a data conversation is active the device is in on-line mode (commands are not sensed and characters are sent to the other party), hence escape sequence (see register S2) is required before issuing this command, otherwise if <b>&amp;D1</b> option is active, <b>DTR</b> pin has to be tied <b>Low</b> to return in command mode.</p>	
Reference	V25ter.	

### 3.5.3.3.6. Return To On Line Mode - O

<b>O - Return To On Line Mode</b>		<b>SELINT 0 / 1</b>
ATO	<p>Execution command is used to return to on-line mode from command mode. If there's no active connection it returns <b>ERROR</b>.</p> <p>Note: After issuing this command, if the device is in conversation, to send other commands to the device you must return to command mode by issuing the escape sequence (see register S2) or tying low <b>DTR</b> pin if <b>&amp;D1</b> option is active.</p>	
Reference	V25ter.	

<b>O - Return To On Line Mode</b>		<b>SELINT 2</b>
ATO	<p>Execution command is used to return to on-line mode from command mode. If there's no active connection it returns <b>NO CARRIER</b>.</p> <p>Note: After issuing this command, if the device is in conversation, to send other commands to the device you must return to command mode by issuing the escape sequence (see register S2) or tying low <b>DTR</b> pin if <b>&amp;D1</b> option is active.</p>	
Reference	V25ter.	

### 3.5.3.4. Modulation Control

#### 3.5.3.4.1. Modulation Selection - +MS

<b>+MS - Modulation Selection</b>		<b>SELINT 0 / 1 / 2</b>
AT+MS=<carrier>[,<automode>[,<min_rate>[,<max_rate>]]]	<p>Set command has no effect is included only for backward compatibility with landline modems.</p> <p>Parameters:</p> <p>&lt;carrier&gt; - a string which specifies the preferred modem carrier to use in originating or answering a connection</p>	V21

+MS - Modulation Selection		SELINT 0 / 1 / 2
	V22 V22B V23C V32 V34 <b>&lt;automode&gt;</b> - it enables/disables automatic modulation negotiation. 0 - disabled 1 - enabled. It has effect only if it is defined for the associated modulation. <b>&lt;min_rate&gt;</b> - it specifies the lowest value at which the <b>DCE</b> may establish a connection. 0 - unspecified <b>&lt;max_rate&gt;</b> - it specifies the highest value at which the <b>DCE</b> may establish a connection. 0 - unspecified 300..14400 - rate in bps	
		Note: to change modulation requested use +CBST command.
AT+MS?	Read command returns the current value of <b>&lt;carrier&gt;</b> , <b>&lt;automode&gt;</b> , <b>&lt;min_rate&gt;</b> , <b>&lt;max_rate&gt;</b> parameters.	
AT+MS=?	Test command returns all supported values of the <b>&lt;carrier&gt;</b> , <b>&lt;automode&gt;</b> , <b>&lt;min_rate&gt;</b> , <b>&lt;max_rate&gt;</b> parameters.	

### 3.5.3.4.2. Line Quality And Auto Retrain - %E

%E - Line Quality Monitor And Auto Retrain Or Fallback/Fallforward		SELINT 0 / 1 / 2
AT%E<n>	Execution command has no effect and is included only for backward compatibility with landline modems.	

### 3.5.3.5. Compression Control

#### 3.5.3.5.1. Data Compression - +DS

+DS - Data Compression		SELINT 0 / 1 / 2
AT+DS=[<n>]	Set command sets the V42 compression parameter.  Parameter: <b>&lt;n&gt;</b> 0 - no compression, it is currently the only supported value; the command has no effect, and is included only for backward compatibility	
AT+DS?	Read command returns current value of the data compression parameter.	
AT+DS=?	Test command returns all supported values of the parameter <b>&lt;n&gt;</b>	
Reference	V25ter	

#### 3.5.3.5.2. Data Compression Reporting - +DR

<b>+DR - Data Compression Reporting</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+DR=&lt;n&gt;</b>	Set command enables/disables the data compression reporting upon connection.  Parameter: <b>&lt;n&gt;</b> 0 - data compression reporting disabled; 1 - data compression reporting enabled upon connection.	
	Note: if enabled, the following intermediate result code is transmitted before the final result code:	
	<b>+DR: &lt;compression&gt;</b> (the only supported value for <compression> is “NONE”)	
<b>AT+DR?</b>	Read command returns current value of <n>.	
<b>AT+DR=?</b>	Test command returns all supported values of the parameter <n>	
Reference	V25ter	

### 3.5.3.6. S Parameters

Basic commands that begin with the letter “S” are known as “**S-Parameters**”. The number following the “S” indicates the “parameter number” being referenced. If the number is not recognized as a valid parameter number, an **ERROR** result code is issued.

If no value is given for the sub parameter of an **S-Parameter**, an **ERROR** result code will be issued and the stored value left unchanged.

Reference: V25ter

#### 3.5.3.6.1. Number Of Rings To Auto Answer - S0

<b>S0 - Number Of Rings To Auto Answer</b>		<b>SELINT 0 / 1</b>
<b>ATS0[=&lt;n&gt;]</b>	Set command sets the number of rings required before device automatically answers an incoming call.  Parameter: <b>&lt;n&gt;</b> - number of rings 0 - auto answer disabled (factory default) 1..255 - number of rings required before automatic answer.	
<b>ATS0?</b>	Read command returns the current value of <b>S0</b> parameter.	
<b>ATS0=?</b>	Test command returns the range for <n> without command echo and parenthesis.	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	
Note	Automatically answer is not enabled if current instance is in	

<b>S0 - Number Of Rings To Auto Answer</b>		<b>SELINT 0 / 1</b>
	online mode	
Reference	V25ter	

<b>S0 - Number Of Rings To Auto Answer</b>		<b>SELINT 2</b>
<b>ATS0=[&lt;n&gt;]</b>	Set command sets the number of rings required before device automatically answers an incoming call.  Parameter: <n> - number of rings 0 - auto answer disabled (factory default) 1..255 - number of rings required before automatic answer.	
<b>ATS0?</b>	Read command returns the current value of <b>S0 parameter</b> .	
Reference	V25ter	

### 3.5.3.6.2. Ring Counter - S1

<b>S1 - Ring Counter</b>		<b>SELINT 0 / 1</b>
<b>ATS1</b>	<b>S1</b> is incremented each time the device detects the ring signal of an incoming call. <b>S1</b> is cleared as soon as no ring occur.  Note: the form <b>ATS1</b> has no effect.	
<b>ATS1?</b>	Read command returns the value of <b>S1</b> ring counter.	
<b>ATS1=?</b>	Test command returns the range of values for <b>S1</b> ring counter without command echo and parenthesis.	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	

<b>S1 - Ring Counter</b>		<b>SELINT 2</b>
<b>ATS1</b>	<b>S1</b> is incremented each time the device detects the ring signal of an incoming call. <b>S1</b> is cleared as soon as no ring occur.  Note: the form <b>ATS1</b> has no effect.	
<b>ATS1?</b>	Read command returns the value of this parameter.	

### 3.5.3.6.3. Escape Character - S2

<b>S2 - Escape Character</b>		<b>SELINT 0 / 1</b>
<b>ATS2[=&lt;char&gt;]</b>	Set command sets the ASCII character to be used as escape character.  Parameter: <char> - escape character decimal ASCII 0..255 - factory default value is 43 (+).	

<b>S2 - Escape Character</b>		<b>SELINT 0 / 1</b>
		Note: the escape sequence consists of three escape characters preceded and followed by <b>n</b> ms of idle (see <b>S12</b> to set <b>n</b> ).
<b>ATS2?</b>		Read command returns the current value of <b>S2</b> parameter.
<b>ATS2=?</b>		Test command returns the range for <char> without command echo and parenthesis
Note		For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s

<b>S2 - Escape Character</b>		<b>SELINT 2</b>
<b>ATS2[=&lt;char&gt;]</b>		Set command sets the ASCII character to be used as escape character.  Parameter: <char> - escape character decimal ASCII 0..255 - factory default value is 43 (+).  Note: the escape sequence consists of three escape characters preceded and followed by <b>n</b> ms of idle (see <b>S12</b> to set <b>n</b> ).
<b>ATS2?</b>		Read command returns the current value of <b>S2</b> parameter.
Note:		the format of the numbers in output is always 3 digits, left-filled with 0s

### 3.5.3.6.4. Command Line Termination Character - S3

<b>S3 - Command Line Termination Character</b>		<b>SELINT 0 / 1</b>
<b>ATS3[=&lt;char&gt;]</b>		Set command sets the value of the character either recognized by the device as command line terminator and generated by the device as part of the header, trailer, and terminator for result codes and information text, along with <b>S4</b> parameter.  Parameter: <char> - command line termination character (decimal ASCII) 0..127 - factory default value is 13 (ASCII <b>CR</b> )  Note: the “previous” value of <b>S3</b> is used to determine the command line termination character for entering the command line containing the <b>S3</b> setting command. However the result code issued shall use the “new” value of <b>S3</b> (as set during the processing of the command line).
<b>ATS3?</b>		Read command returns the current value of <b>S3</b> parameter.
<b>ATS3=?</b>		Test command returns the range for <char> without command echo and parenthesis.
Note		For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s
Reference		V25ter

<b>S3 - Command Line Termination Character</b>		<b>SELINT 2</b>
<b>ATS3[=&lt;char&gt;]</b>		Set command sets the value of the character either recognized by the device as

<b>S3 - Command Line Termination Character</b>		<b>SELINT 2</b>
	<p>command line terminator and generated by the device as part of the header, trailer, and terminator for result codes and information text, along with <b>S4 parameter</b>.</p> <p>Parameter:  <b>&lt;char&gt;</b> - command line termination character (decimal ASCII)            0..127 - factory default value is 13 (ASCII <b>&lt;CR&gt;</b>)</p> <p>Note: the “previous” value of <b>S3</b> is used to determine the command line termination character for entering the command line containing the <b>S3</b> setting command. However the result code issued shall use the “new” value of <b>S3</b> (as set during the processing of the command line)</p>	
<b>ATS3?</b>	Read command returns the current value of <b>S3 parameter</b> .  Note: the format of the numbers in output is always 3 digits, left-filled with 0s	
Reference	V25ter	

### 3.5.3.6.5. Response Formatting Character - S4

<b>S4 - Response Formatting Character</b>		<b>SELINT 0 / 1</b>
<b>ATS4[=&lt;char&gt;]</b>	Set command sets the value of the character generated by the device as part of the header, trailer, and terminator for result codes and information text, along with the <b>S3 parameter</b> .  Parameter: <b>&lt;char&gt;</b> - response formatting character (decimal ASCII) 0..127 - factory default value is 10 (ASCII <b>LF</b> )	
	Note: if the value of <b>S4</b> is changed in a command line the result code issued in response of that command line will use the new value of <b>S4</b> .	
<b>ATS4?</b>	Read command returns the current value of <b>S4 parameter</b> .	
<b>ATS4=?</b>	Test command returns the range for <b>&lt;char&gt;</b> without command echo and parenthesis	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	
Reference	V25ter	

<b>S4 - Response Formatting Character</b>		<b>SELINT 2</b>
<b>ATS4[=&lt;char&gt;]</b>	Set command sets the value of the character generated by the device as part of the header, trailer, and terminator for result codes and information text, along with the <b>S3 parameter</b> .  Parameter: <b>&lt;char&gt;</b> - response formatting character (decimal ASCII) 0..127 - factory default value is 10 (ASCII <b>LF</b> )	

Note: if the value of **S4** is changed in a command line the result code issued in response of that command line will use the new value of **S4**.

<b>S4 - Response Formatting Character</b>		<b>SELINT 2</b>
<b>ATS4?</b>	Read command returns the current value of S4 parameter.  Note: the format of the numbers in output is always 3 digits, left-filled with 0s	
Reference	V25ter	

### 3.5.3.6.6. Command Line Editing Character - S5

<b>S5 - Command Line Editing Character</b>		<b>SELINT 0 / 1</b>
<b>ATS5[=&lt;char&gt;]</b>	Set command sets the value of the character recognized by the device as a request to delete from the command line the immediately preceding character.  Parameter: <char> - command line editing character (decimal ASCII) 0..127 - factory default value is 8 (ASCII <b>BS</b> ).	
<b>ATS5?</b>	Read command returns the current value of <b>S5</b> parameter.	
<b>ATS5=?</b>	Test command returns the range for <char> without command echo and parenthesis.	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	
Reference	V25ter	

<b>S5 - Command Line Editing Character</b>		<b>SELINT 2</b>
<b>ATS5[=&lt;char&gt;]</b>	Set command sets the value of the character recognized by the device as a request to delete from the command line the immediately preceding character.  Parameter: <char> - command line editing character (decimal ASCII) 0..127 - factory default value is 8 (ASCII <b>BS</b> ).	
<b>ATS5?</b>	Read command returns the current value of <b>S5 parameter</b> .	
	Note: the format of the numbers in output is always 3 digits, left-filled with 0s	
Reference	V25ter	

### 3.5.3.6.7. Connection Completion Time-Out - S7

<b>S7 - Connection Completion Time-Out</b>		<b>SELINT 0 / 1</b>
<b>ATS7[=&lt;tout&gt;]</b>	Set command sets the amount of time, in seconds, that the device shall allow between either answering a call (automatically or by A command) or completion of signalling of call addressing information to network (dialling), and establishment of a connection with the remote device.  Parameter: <tout> - number of seconds	

S7 - Connection Completion Time-Out		SELINT 0 / 1
	1..255 - factory default value is 60.	
ATS7?	Read command returns the current value of <b>S7 parameter</b> .	
ATS7=?	Test command returns the range for <tout> without command echo and parenthesis.	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	
Reference	V25ter	

S7 - Connection Completion Time-Out		SELINT 2
ATS7=[<tout>]	<p>Set command sets the amount of time, in seconds, that the device shall allow between either answering a call (automatically or by A command) or completion of signalling of call addressing information to network (dialling), and establishment of a connection with the remote device.</p> <p>Parameter:  &lt;tout&gt; - number of seconds  1..255 - factory default value is 60</p>	
ATS7?	Read command returns the current value of <b>S7 parameter</b> .	
	Note: the format of the numbers in output is always 3 digits, left-filled with 0s	
Reference	V25ter	

### 3.5.3.6.8. – Carrier Off With Firm Time - S10

S10 –Carrier Off With Firm Time		SELINT 0 / 1 / 2
ATS10	Execution command has no effect and is included only for backward compatibility with landline modems	

### 3.5.3.6.9. Escape Prompt Delay - S12

S12 - Escape Prompt Delay		SELINT 0 / 1
ATS12[=<time>]	<p>Set command sets:</p> <ol style="list-style-type: none"> <li>1) the minimum period, before receipt of the first character of the three escape character sequence, during which no other character has to be detected in order to accept it as valid first character;</li> <li>2) the maximum period allowed between receipt of first, or second, character of the three escape character sequence and receipt of the next;</li> <li>3) the minimum period, after receipt of the last character of the three escape character sequence, during which no other character has to be detected in order to accept the escape sequence as a valid one.</li> </ol> <p>Parameter:</p>	

<b>S12 - Escape Prompt Delay</b>		<b>SELINT 0 / 1</b>
	<p>&lt;time&gt; - expressed in fiftieth of a second 20..255 - factory default value is 50.</p> <p>Note: after <b>CONNECT</b> result code it is possible to accept the first character of the three escape character sequence without having to wait for a minimum period to be passed.</p>	
<b>ATS12?</b>	Read command returns the current value of <b>S12</b> parameter.	
<b>ATS12=?</b>	Test command returns the range for <time> without command echo and parenthesis.	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	

<b>S12 - Escape Prompt Delay</b>		<b>SELINT 2</b>
<b>ATS12=[&lt;time&gt;]</b>	<p>Set command sets:</p> <ol style="list-style-type: none"> <li>1) the minimum period, before receipt of the first character of the three escape character sequence, during which no other character has to be detected in order to accept it as valid first character;</li> <li>2) the maximum period allowed between receipt of first or second character of the three escape character sequence and receipt of the next;</li> <li>3) the minimum period, after receipt of the last character of the three escape character sequence, during which no other character has to be detected in order to accept the escape sequence as a valid one.</li> </ol> <p>Parameter:            &lt;time&gt; - expressed in fiftieth of a second            2..255 - factory default value is 50.</p> <p>Note: the minimum period <b>S12</b> has to pass after <b>CONNECT</b> result code too, before a received character is accepted as valid first character of the three escape character sequence.</p>	
<b>ATS12?</b>	Read command returns the current value of <b>S12 parameter</b> .	
	Note: the format of the numbers in output is always 3 digits, left-filled with 0s	

### 3.5.3.6.10. Delay To DTR Off - S25

<b>S25 - Delay To DTR Off</b>		<b>SELINT 0 / 1</b>
<b>ATS25[=&lt;time&gt;]</b>	Set command defines the amount of time, in hundredths of second, that the device will ignore the <b>DTR</b> for taking the action specified by command <b>&amp;D</b> .	

Parameter:  
<time> - expressed in hundredths of a second  
0..255 - factory default value is 5.

<b>S25 - Delay To DTR Off</b>		<b>SELINT 0 / 1</b>
	Note: the delay is effective only if its value is greater than 5.	
<b>ATS25?</b>	Read command returns the current value of <b>S25</b> parameter.	
<b>ATS25=?</b>	Test command returns the range for <time> without command echo and parenthesis.  Note: the output depends on the choice made through #SELINT command.	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	

<b>S25 -Delay To DTR Off</b>		<b>SELINT 2</b>
<b>ATS25=[&lt;time&gt;]</b>	Set command defines the amount of time, in hundredths of second, that the device will ignore the <b>DTR</b> for taking the action specified by command <b>&amp;D</b> .  Parameter: <time> - expressed in hundredths of a second 0..255 - factory default value is 5.  Note: the delay is effective only if its value is greater than 5.	
<b>ATS25?</b>	Read command returns the current value of <b>S25 parameter</b> .	
	Note: the format of the numbers in output is always 3 digits, left-filled with 0s	

### 3.5.3.6.11. Disconnect Inactivity Timer - S30

<b>S30 - Disconnect Inactivity Timer</b>		<b>SELINT 0 / 1</b>
<b>ATS30[=&lt;tout&gt;]</b>	Set command defines the inactivity time-out in minutes. The device disconnects if no characters are exchanged for a time period of at least <tout> minutes.  Parameter: <tout> - expressed in minutes 0 - disabled, disconnection due to inactivity is disabled (factory default). 1..255 - inactivity time-out value.	
<b>ATS30?</b>	Read command returns the current value of <b>S30</b> parameter.	
<b>ATS30=?</b>	Test command returns the range for <tout> without command echo and parenthesis.  Note: the output depends on the choice made through #SELINT command.	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	

<b>S30 -Disconnect Inactivity Timer</b>		<b>SELINT 2</b>
<b>ATS30[=&lt;tout&gt;]</b>	Set command defines the inactivity time-out in minutes. The device disconnects if no characters are exchanged for a time period of at least <tout> minutes.	

<b>S30 -Disconnect Inactivity Timer</b>		<b>SELINT 2</b>
	Parameter: <b>&lt;tout&gt;</b> - expressed in minutes 0 - disabled, disconnection due to inactivity is disabled (factory default). 1..127 - inactivity time-out value	
<b>ATS30?</b>	Read command returns the current value of <b>S30 parameter</b> .  Note: the format of the numbers in output is always 3 digits, left-filled with 0s	

### 3.5.3.6.12. Delay Before Forced Hang Up - S38

<b>S38 -Delay Before Forced Hang Up</b>		<b>SELINT 0 / 1</b>
<b>ATS38[=&lt;delay&gt;]</b>	Set command sets the delay, in seconds, between the device's receipt of <b>H</b> command (or <b>ON-to-OFF</b> transition of <b>DTR</b> if device is programmed to follow the signal) and the disconnect operation.  Parameter: <b>&lt;delay&gt;</b> - expressed in seconds 0..254 - the device will wait <b>&lt;delay&gt;</b> seconds for the remote device to acknowledge all data in the device buffer before disconnecting (factory default value is 0). 255 - the device doesn't time-out and continues to deliver data in the buffer until the connection is lost or the data is delivered.  Note: <b>&lt;delay&gt;</b> parameter can be used to ensure that data in device buffer is sent before device disconnects.	
<b>ATS38?</b>	Read command returns the current value of <b>S38 parameter</b> .	
<b>ATS38=?</b>	Test command returns the range of supported values for <b>&lt;delay&gt;</b> without command echo and parenthesis.	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	

<b>S38 -Delay Before Forced Hang Up</b>		<b>SELINT 2</b>
<b>ATS38[=&lt;delay&gt;]</b>	Set command sets the delay, in seconds, between the device's receipt of <b>H</b> command (or <b>ON-to-OFF</b> transition of <b>DTR</b> ) and the disconnect operation.  Parameter: <b>&lt;delay&gt;</b> - acknowledge timer in units of seconds 0..254 - the device will wait <b>&lt;delay&gt;</b> seconds for the remote device to acknowledge all data in the device buffer before disconnecting (factory default value is 0). 255 - the device doesn't time-out and continues to attempt to deliver data in the buffer until the connection is lost or the data is delivered.  Note: <b>&lt;delay&gt;</b> parameter can be used to ensure that data in device buffer is sent before device disconnects.	

<b>S38 -Delay Before Forced Hang Up</b>		<b>SELINT 2</b>
<b>ATS38?</b>	Read command returns the current value of <b>S38 parameter</b> .  Note: the format of the numbers in output is always 3 digits, left-filled with 0s	

## 3.5.4. 3GPP TS 27.007 AT Commands

### 3.5.4.1. General

#### 3.5.4.1.1. Request Manufacturer Identification - +CGMI

<b>+CGMI - Request Manufacturer Identification</b>		<b>SELINT 0 / 1</b>
<b>AT+CGMI</b>	Execution command returns the device manufacturer identification code without command echo. The output depends on the choice made through #SELINT command.	
<b>AT+CGMI?</b>	Read command has the same behaviour as Execution command	
Reference	3GPP TS 27.007	

<b>+CGMI - Request Manufacturer Identification</b>		<b>SELINT 2</b>
<b>AT+CGMI</b>	Execution command returns the device manufacturer identification code without command echo. The output depends on the choice made through #SELINT command.	
<b>AT+CGMI=?</b>	Test command returns <b>OK</b> result code.	
Reference	3GPP TS 27.007	

#### 3.5.4.1.2. Request Model Identification - +CGMM

<b>+CGMM - Request Model Identification</b>		<b>SELINT 0 / 1</b>
<b>AT+CGMM</b>	Execution command returns the device model identification code without command echo.	
Reference	3GPP TS 27.007	

<b>+CGMM - Request Model Identification</b>		<b>SELINT 2</b>
<b>AT+CGMM</b>	Execution command returns the device model identification code without command echo.	
<b>AT+CGMM=?</b>	Test command returns <b>OK</b> result code.	
Reference	3GPP TS 27.007	

#### 3.5.4.1.3. Request Revision Identification - +CGMR

<b>+CGMR - Request Revision Identification</b>		<b>SELINT 0 / 1</b>
<b>AT+CGMR</b>	Execution command returns device software revision number without command echo.	
<b>AT+CGMR?</b>	Read command has the same behaviour as Execution command	

<b>+CGMR - Request Revision Identification</b>	<b>SELINT 0 / 1</b>
Reference	3GPP TS 27.007

<b>+CGMR - Request Revision Identification</b>	<b>SELINT 2</b>
AT+CGMR	Execution command returns device software revision number without command echo.
AT+CGMR=?	Test command returns <b>OK</b> result code.
Reference	3GPP TS 27.007

#### 3.5.4.1.4. Request Product Serial Number Identification - +CGSN

<b>+CGSN - Request Product Serial Number Identification</b>	<b>SELINT 0 / 1</b>
AT+CGSN	Execution command returns the product serial number, identified as the IMEI of the mobile, without command echo.
AT+CGSN?	Read command has the same behaviour as Execution command
Reference	3GPP TS 27.007

<b>+CGSN - Request Product Serial Number Identification</b>	<b>SELINT 2</b>
AT+CGSN	Execution command returns the product serial number, identified as the IMEI of the mobile, without command echo.
AT+CGSN=?	Test command returns <b>OK</b> result code.
Reference	3GPP TS 27.007

#### 3.5.4.1.5. Select TE Character Set - +CSCS

<b>+CSCS - Select TE Character Set</b>	<b>SELINT 0 / 1</b>
AT+CSCS [=<chset>]	<p>Set command sets the current character set used by the device.</p> <p>Parameter:</p> <p>&lt;chset&gt; - character set</p> <ul style="list-style-type: none"> <li>“IRA” - ITU-T.50</li> <li>”8859-1” - ISO 8859 Latin 1</li> <li>”PCCP437” - PC character set Code Page 437.</li> <li>”UCS2” - 16-bit universal multiple-octet coded character set (ISO/IEC10646)</li> </ul> <p>Note: If parameter is omitted then the behaviour of Set command is the same as Read command.</p>
AT+CSCS?	Read command returns the current value of the active character set.
AT+CSCS=?	<p>Test command returns the supported values of the parameter &lt;chset&gt;. For compatibility with previous versions, Test command returns</p> <p><b>+CSCS: (“IRA”)</b></p> <p>An enhanced version of Test command has been defined: <b>AT+CSCS=??</b>, that provides the complete range of values for &lt;chset&gt;.</p>
AT+CSCS=??	Enhanced test command returns the supported values of the parameter <chset>

<b>+CSCS - Select TE Character Set</b>	<b>SELINT 0 / 1</b>
Reference	3GPP TS 27.007

<b>+CSCS - Select TE Character Set</b>	<b>SELINT 2</b>
AT+CSCS= [<chset>]	<p>Set command sets the current character set used by the device.</p> <p>Parameter:</p> <p>&lt;chset&gt; - character set</p> <ul style="list-style-type: none"> <li>“GSM” - GSM default alphabet (3GPP TS 23.038)</li> <li>“IRA” - international reference alphabet (ITU-T T.50)</li> <li>“8859-1” - ISO 8859 Latin 1 character set</li> <li>“PCCP437” - PC character set Code Page 437</li> <li>“UCS2” - 16-bit universal multiple-octet coded character set (ISO/IEC10646)</li> </ul>
AT+CSCS?	Read command returns the current value of the active character set.
AT+CSCS=?	Test command returns the supported values for parameter <chset>.
Reference	3GPP TS 27.007

### 3.5.4.1.6. International Mobile Subscriber Identity (IMSI) - +CIMI

<b>+CIMI - Request International Mobile Subscriber Identify (IMSI)</b>	<b>SELINT 0 / 1</b>
AT+CIMI	<p>Execution command returns the value of the Internal Mobile Subscriber Identity stored in the SIM without command echo.</p> <p>Note: a SIM card must be present in the SIM card housing, otherwise the command returns <b>ERROR</b>.</p>
AT+CIMI?	Read command has the same behaviour as Execution command
Reference	3GPP TS 27.007

<b>+CIMI - Request International Mobile Subscriber Identify (IMSI)</b>	<b>SELINT 2</b>
AT+CIMI	<p>Execution command returns the value of the Internal Mobile Subscriber Identity stored in the SIM without command echo.</p> <p>Note: a SIM card must be present in the SIM card housing, otherwise the command returns <b>ERROR</b>.</p>
AT+CIMI=?	Test command returns <b>OK</b> result code.
Reference	3GPP TS 27.007

### 3.5.4.1.7. Multiplexing Mode - +CMUX

<b>+CMUX - Multiplexing Mode</b>	<b>SELINT 2</b>
AT+CMUX= [<mode>,]<subset>	Set command is used to enable/disable the 3GPP TS 27.010 multiplexing protocol control channel.

<pre>[,&lt;port_speed&gt; [,&lt;N1&gt; ]]]</pre>	<p>Parameters:</p> <p>&lt;<b>mode</b>&gt; multiplexer transparency mechanism 0 - basic option; it is currently the only supported value.</p> <p>&lt;<b>subset</b>&gt; 0 - UIH frames used only; it is currently the only supported value.</p> <p>&lt;<b>port_speed</b>&gt; 2 – 19200 bps 3 – 38400 bps 4 – 57600 bps 5 – 115200 bps</p> <p>&lt;<b>N1</b>&gt; max frame size, it indicates the maximum lenght of the information field of CMUX frame (point 5.7.2 of 3GPP TS 07.10) 1 to MaxFrameSize</p> <p>Note: after entering the <b>Multiplexed Mode</b> an inactive timer of five seconds starts. If no CMUX control channel is established before this inactivity timer expires the engine returns to <b>AT Command Mode</b></p> <p>Note: CMUX cannot work with the automatic speed detection; the speed must be set with AT+IPR=&lt;rate&gt; (before sending AT+CMUX) or using the 3<sup>rd</sup> parameter &lt;<b>port_speed</b>&gt;. If the &lt;<b>port_speed</b>&gt; parameter has been used, the speed will be changed after the OK (response to AT+CMUX). At the end of the CMUX session the IPR preserve the value set with &lt;<b>port_speed</b>&gt;. To be sure that the firmware supports this feature, check it with the test command.</p> <p>Note: all the CMUX protocol parameters are fixed as defined in GSM07.10 and cannot be changed. The parameter &lt;<b>N1</b>&gt; is not supported by all products or software version; to be sure check it with the test command. If &lt;<b>N1</b>&gt; is not supported or not used it will be set to the default value.</p> <p>Note: the default max frame size is: <b>N1=127</b>; using this configuration, the largest allowed CMUX frame (including start and end flag) is 133 bytes long.</p> <p><b>Note: to set a N1 greater then 127, it is mandatory to configure the module using the command AT#CPUMODE=3</b></p>
<b>AT+CMUX?</b>	<p>Read command returns all the current values of the parameters in the format:</p> <p>+CMUX: &lt;<b>mode</b>&gt;,&lt;<b>subset</b>&gt;,&lt;<b>port_speed</b>&gt;,&lt;<b>N1</b>&gt;</p> <p>Note: the &lt;<b>port_speed</b>&gt; will be reported only if it has a supported value.</p>
<b>AT+CMUX=?</b>	<p>Test command returns the range of supported values for parameters &lt;<b>mode</b>&gt;, &lt;<b>subset</b>&gt;, &lt;<b>port_speed</b>&gt; and &lt;<b>N1</b>&gt;.</p>

Reference	3GPP TS 27.007, 3GPP TS 27.010, 3GPP TS 07.10
-----------	---

### 3.5.4.1.8. Select Wireless Network - +WS46

+WS46 - PCCA STD-101 Select Wireless Network		SELINT 2
<b>AT+WS46=[&lt;n&gt;]</b>	Set command selects the cellular network (Wireless Data Service, WDS) to operate with the <b>TA</b> (WDS-Side Stack Selection).	
	Parameter: <b>&lt;n&gt;</b> - integer type, it is the WDS-Side Stack to be used by the <b>TA</b> . 12 - GSM digital cellular	
<b>AT+WS46?</b>	Read command reports the currently selected cellular network, in the format:  <b>+ WS46: &lt;n&gt;</b>	
<b>AT+WS46=?</b>	Test command reports the range for the parameter <b>&lt;n&gt;</b> .	
Reference	3GPP TS 27.007	

### 3.5.4.1.9. Select preferred MT power class - +CPWC

+CPWC – Select preferred MT power class		SELINT 2						
<b>AT+CPWC= [&lt;class&gt; [,&lt;band&gt;]]</b>	<p>The set command is used to select the preferred MT power class for each GSM frequency band supported.</p> <p><b>&lt;class&gt;</b>: numeric parameter which indicates the power class preference to be used; its possible values are:</p> <ul style="list-style-type: none"> <li>0 - default power class for the relevant band</li> <li>1, 2 - allowable power classes on DCS1800 and PCS1900 bands;</li> <li>4, 5 - allowable power classes on GSM900 and GSM850 bands;</li> </ul> <p><b>&lt;band&gt;</b>: numeric parameter which indicates the band to apply the power class setting; its possible values are:</p> <ul style="list-style-type: none"> <li>0 - GSM900 and GSM850;</li> <li>1 - DCS1800;</li> <li>2 - PCS1900;</li> </ul> <p>Using this command is possible to reduce the Nominal Maximum output power according to the following tables:</p> <p><b>GSM900 and GSM850</b></p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th style="text-align: center;"><b>Power class</b></th> <th style="text-align: center;"><b>Nominal Maximum output power</b></th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">4 (default)</td> <td style="text-align: center;">2 W (33 dBm)</td> </tr> <tr> <td style="text-align: center;">5</td> <td style="text-align: center;">0,8 W (29 dBm)</td> </tr> </tbody> </table>	<b>Power class</b>	<b>Nominal Maximum output power</b>	4 (default)	2 W (33 dBm)	5	0,8 W (29 dBm)	
<b>Power class</b>	<b>Nominal Maximum output power</b>							
4 (default)	2 W (33 dBm)							
5	0,8 W (29 dBm)							

	<p><b>DCS1800</b></p> <table border="1"> <thead> <tr> <th><b>Power class</b></th><th><b>Nominal Maximum output power</b></th></tr> </thead> <tbody> <tr> <td>1 (default)</td><td>1 W (30 dBm)</td></tr> <tr> <td>2</td><td>0,25 W (24 dBm)</td></tr> </tbody> </table> <p><b>PCS1900</b></p> <table border="1"> <thead> <tr> <th><b>Power class</b></th><th><b>Nominal Maximum output power</b></th></tr> </thead> <tbody> <tr> <td>1 (default)</td><td>1 W (30 dBm)</td></tr> <tr> <td>2</td><td>0,25 W (24 dBm)</td></tr> </tbody> </table> <p>Note: it is advisable to use this command for reducing power consumption when the received signal strength is high (about -70 dBm) and the module is working in static conditions.</p> <p>Note: if &lt;class&gt; is given but &lt;band&gt; is left out, the power class setting is applied to GSM900 and GSM850 bands.</p> <p>Note: the setting is saved in NVM (and available on following reboot).</p>	<b>Power class</b>	<b>Nominal Maximum output power</b>	1 (default)	1 W (30 dBm)	2	0,25 W (24 dBm)	<b>Power class</b>	<b>Nominal Maximum output power</b>	1 (default)	1 W (30 dBm)	2	0,25 W (24 dBm)
<b>Power class</b>	<b>Nominal Maximum output power</b>

### 3.5.4.2.3. Radio Link Protocol - +CRLP

<b>+CRLP - Radio Link Protocol</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+CRLP=[&lt;iws&gt;</b>	Set command sets Radio Link Protocol (RLP) parameters used when non-	

+CRLP - Radio Link Protocol		SELINT 0 / 1 / 2
[,<mws>[,<T1> [,<N2>[,<ver>]]]]]	<p>transparent data calls are originated</p> <p>Parameters:</p> <p>&lt;iws&gt; - IWF window Dimension 1..61 - factory default value is 61</p> <p>&lt;mws&gt; - MS window Dimension 1..61 - default value is 61</p> <p>&lt;T1&gt; - acknowledge timer (10 ms units). 39..255 - default value is 78</p> <p>&lt;N2&gt; - retransmission attempts 1..255 - default value is 6</p> <p>&lt;ver&gt; - protocol version 0</p>	
AT+CRLP?	Read command returns the current value of the RLP protocol parameters.	
AT+CRLP=?	Test command returns supported range of values of the RLP protocol parameters.	
Reference	3GPP TS 27.007	

### 3.5.4.2.4. Service Reporting Control - +CR

+CR - Service Reporting Control		SELINT 0 / 1 / 2
AT+CR=[<mode>]	<p>Set command controls whether or not intermediate result code +CR is returned from <b>TA</b> to <b>TE</b>.</p> <p>Parameter:</p> <p>&lt;mode&gt;</p> <p>0 - disables +CR reporting (factory default) 1 - enables +CR reporting: the intermediate result code is transmitted at the point during connect negotiation at which the <b>TA</b> has determined which speed and quality of service will be used, before any error control or data compression reports are transmitted, and before the intermediate result code <b>CONNECT</b> is transmitted. Its format is:</p> <p>+CR: &lt;serv&gt;</p> <p>where:</p> <p>&lt;serv&gt;</p> <ul style="list-style-type: none"> <li>ASYNC - asynchronous transparent</li> <li>SYNC - synchronous transparent</li> <li>REL ASYNC - asynchronous non-transparent</li> <li>REL SYNC - synchronous non-transparent.</li> </ul>	

Note: this command replaces V.25ter [14] command Modulation Reporting Control

<b>+CR - Service Reporting Control</b>		<b>SELINT 0 / 1 / 2</b>
	(+MR), which is not appropriate for use with a GSM terminal.	
<b>AT+CR?</b>	Read command returns whether or not intermediate result code +CR is enabled, in the format:	
	<b>+CR: &lt;mode&gt;</b>	
<b>AT+CR=?</b>	Test command returns the supported range of values of parameter <mode>.	
Reference	3GPP TS 27.007	

### 3.5.4.2.5. Extended Error Report - +CEER

<b>+CEER - Extended Error Report</b>		<b>SELINT 0 / 1</b>
<b>AT+CEER</b>	Execution command returns one or more lines of information text <report> offering the TA user an extended error report, in the format:	
	<b>+CEER: &lt;report&gt;</b>	
	This report regards some error condition that may occur:	
	<ul style="list-style-type: none"> <li>• the failure in the last unsuccessful call setup (originating or answering)</li> <li>• the last call release</li> </ul>	
	Note: if none of the previous conditions has occurred since power up then “ <b>No error</b> ” condition is reported	
<b>AT+CEER?</b>	Read command reports a information text regarding some error condition that may occur	
<b>AT+CEER=?</b>	Test command returns <b>OK</b> result code.	
Reference	3GPP TS 27.007, GSM 04.08	

<b>+CEER - Extended Error Report</b>		<b>SELINT 2</b>
<b>AT+CEER</b>	Execution command returns one or more lines of information text <report> offering the TA user an extended error report, in the format:	
	<b>+CEER: &lt;report&gt;</b>	
	This report regards some error condition that may occur:	
	<ul style="list-style-type: none"> <li>• the failure in the last unsuccessful call setup (originating or answering)</li> <li>• the last call release</li> </ul>	
	Note: if none of the previous conditions has occurred since power up then “ <b>Normal, unspecified</b> ” condition is reported	
<b>AT+CEER=?</b>	Test command returns <b>OK</b> result code.	

<b>+CEER - Extended Error Report</b>	<b>SELINT 2</b>
Reference	3GPP TS 27.007, GSM 04.08

### 3.5.4.2.6. Cellular Result Codes - +CRC

<b>+CRC - Cellular Result Codes</b>	<b>SELINT 0 / 1</b>
<b>AT+CRC=&lt;mode&gt;</b>	<p>Set command controls whether or not the extended format of incoming call indication is used.</p> <p>Parameter:  <b>&lt;mode&gt;</b>          0 - disables extended format reporting (factory default)          1 - enables extended format reporting</p> <p>When enabled, an incoming call is indicated to the <b>TE</b> with unsolicited result code:</p> <p><b>+CRING:&lt;type&gt;</b></p> <p>instead of the normal <b>RING</b>.</p> <p>where</p> <p><b>&lt;type&gt;</b> - call type:          DATA          FAX - facsimile (TS 62)          VOICE - normal voice (TS 11)</p>
<b>AT+CRC?</b>	Read command returns current value of the parameter <b>&lt;mode&gt;</b> .
<b>AT+CRC=?</b>	Test command returns supported values of the parameter <b>&lt;mode&gt;</b> .
Reference	3GPP TS 27.007

<b>+CRC - Cellular Result Codes</b>	<b>SELINT 2</b>
<b>AT+CRC= [&lt;mode&gt;]</b>	<p>Set command controls whether or not the extended format of incoming call indication is used.</p> <p>Parameter:  <b>&lt;mode&gt;</b>          0 - disables extended format reporting (factory default)          1 - enables extended format reporting:</p> <p>When enabled, an incoming call is indicated to the <b>TE</b> with unsolicited result code</p> <p><b>+CRING: &lt;type&gt;</b></p> <p>instead of the normal <b>RING</b>.</p> <p>where</p> <p><b>&lt;type&gt;</b> - call type:          ASYNC - asynchronous transparent data</p>

+CRC - Cellular Result Codes		SELINT 2
	SYNC - synchronous transparent data REL ASYNC - asynchronous non-transparent data REL SYNC - synchronous non-transparent data FAX - facsimile (TS 62) VOICE - normal voice (TS 11)	
AT+CRC?	Read command returns current value of the parameter <mode>.	
AT+CRC=?	Test command returns supported values of the parameter <mode>.	
Reference	3GPP TS 27.007	

### 3.5.4.2.7. Single Numbering Scheme - +CSNS

+CSNS - Single Numbering Scheme		SELINT 0 / 1 / 2
AT+CSNS=[<mode>]	<p>Set command selects the bearer to be used when no bearer capability information is provided within a mobile terminated call. The command has to be set before the call comes. Parameter values set with +CBST command shall be used when &lt;mode&gt; equals to a data service.</p> <p>Parameter:  <b>&lt;mode&gt;</b>          0 - voice (factory default)          2 - fax (TS 62)          4 - data</p> <p>Note: if +CBST parameter is set to a value that is not applicable to single numbering calls, ME/TA shall map the value to the closest valid one. E.g. if user has set &lt;speed&gt;=71, &lt;name&gt;=0 and &lt;ce&gt;=1 (non-transparent asynchronous 9600 bps V.110 ISDN connection) for mobile originated calls, ME/TA shall map the values into non-transparent asynchronous 9600 bps V.32 modem connection when single numbering scheme call is answered.</p>	
AT+CSNS?	Read command returns current value of the parameter <mode>.	
AT+CSNS=?	Test command returns supported values of parameter <mode>.	
Reference	3GPP TS 27.007	

### 3.5.4.2.8. Voice Hang Up Control - +CVHU

+CVHU - Voice Hang Up Control		SELINT 0 / 1
AT+CVHU[=<mode>]	<p>Set command selects whether ATH or "drop DTR" shall cause a voice connection to be disconnected or not.</p> <p>Parameter:  <b>&lt;mode&gt;</b>          0 - "Drop DTR" ignored but OK result code given. ATH disconnects.</p>	

<b>+CVHU - Voice Hang Up Control</b>		<b>SELINT 0 / 1</b>
	<p>1 - "Drop DTR" and <b>ATH</b> ignored but <b>OK</b> result code given.          2 - "Drop DTR" behaviour according to <b>&amp;D</b> setting. <b>ATH</b> disconnects (factory default).</p> <p>Note: if parameter &lt;mode&gt; is omitted the behaviour of Set command is the same as Read command.</p>	
<b>AT+CVHU?</b>	Read command reports the current value of the <mode> parameter, <b>+CVHU: &lt;mode&gt;</b>	
<b>AT+CVHU=?</b>	Test command reports the range of supported values for parameter <mode>	

<b>+CVHU - Voice Hang Up Control</b>		<b>SELINT 2</b>
<b>AT+CVHU= [&lt;mode&gt;]</b>	<p>Set command selects whether <b>ATH</b> or "drop DTR" shall cause a voice connection to be disconnected or not.</p> <p>Parameter:  <b>&lt;mode&gt;</b></p> <p>0 - "Drop DTR" ignored but <b>OK</b> result code given. <b>ATH</b> disconnects.          1 - "Drop DTR" and <b>ATH</b> ignored but <b>OK</b> result code given.          2 - "Drop DTR" behaviour according to <b>&amp;D</b> setting. <b>ATH</b> disconnects (factory default).</p>	
<b>AT+CVHU?</b>	Read command reports the current value of the <mode> parameter, in the format:  <b>+CVHU: &lt;mode&gt;</b>	
<b>AT+CVHU=?</b>	Test command reports the range of supported values for parameter <mode>	

### 3.5.4.3. Network Service Handling

#### 3.5.4.3.1. Subscriber Number - +CNUM

<b>+CNUM - Subscriber Number</b>		<b>SELINT 0 / 1</b>
<b>AT+CNUM</b>	Execution command returns the MSISDN (if the phone number of the device has been stored in the SIM card) in the format:  <b>+CNUM: &lt;number&gt;,&lt;type&gt;</b>	
where <b>&lt;number&gt;</b> - string containing the phone number in the format <type> <b>&lt;type&gt;</b> - type of number: 129 - national numbering scheme 145 - international numbering scheme (contains the character "+").		
Reference	3GPP TS 27.007	

<b>+CNUM - Subscriber Number</b>		<b>SELINT 2</b>
<b>AT+CNUM</b>		If the ENS functionality has not been

+CNUM - Subscriber Number	SELINT 2
	previously enabled (see #ENS)
	Execution command returns the MSISDN (if the phone number of the device has been stored in the SIM card) in the format:  +CNUM: <alpha>,<number>,<type>  If the ENS functionality has been previously enabled (see #ENS)
	Execution command returns the MSISDN (if the phone number of the device has been stored in the SIM card) in the format:  +CNUM: <alpha>,<number>,<type>[<CR><LF> +CNUM: <alpha>,<number>,<type>[...]]  where: <alpha> - alphanumeric string associated to <number>; used character set should be the one selected with +CSCS. <number> - string containing the phone number in the format <type> <type> - type of number: 129 - national numbering scheme 145 - international numbering scheme (contains the character "+").
AT+CNUM=?	Test command returns the OK result code
Reference	3GPP TS 27.007

### 3.5.4.3.2. Read Operator Names - +COPN

+COPN - Read Operator Names	SELINT 0 / 1
AT+COPN	Execution command returns the list of operator names from the ME in the format:  +COPN: <numeric1>,<alpha1>[<CR><LF><CR><LF> +COPN: <numeric2>,<alpha2>[...]]  where: <numericn> - string type, operator in numeric format (see +COPS) <alphan> - string type, operator in long alphanumeric format (see +COPS)  Note: each operator code <numericn> that has an alphanumeric equivalent <alphan> in the ME memory is returned
Reference	3GPP TS 27.007

+COPN - Read Operator Names		SELINT 2
AT+COPN	<p>Execution command returns the list of operator names from the ME in the format:</p> <pre>+COPN: &lt;numeric1&gt;,&lt;alpha1&gt;[&lt;CR&gt;&lt;LF&gt; +COPN: &lt;numeric2&gt;,&lt;alpha2&gt;[...]]</pre> <p>where:          &lt;numericn&gt; - string type, operator in numeric format (see +COPS)          &lt;alphan&gt; - string type, operator in long alphanumeric format (see +COPS)</p> <p>Note: each operator code &lt;numericn&gt; that has an alphanumeric equivalent &lt;alphan&gt; in the ME memory is returned</p>	
AT+COPN=?	Test command returns the <b>OK</b> result code	
Reference	3GPP TS 27.007	

### 3.5.4.3.3. Network Registration Report - +CREG

+CREG - Network Registration Report		SELINT 0 / 1
AT+CREG[=<mode>]	<p>Set command enables/disables network registration reports depending on the parameter &lt;mode&gt;.</p> <p>Parameter:  <b>&lt;mode&gt;</b></p> <ul style="list-style-type: none"> <li>0 - disable network registration unsolicited result code (factory default)</li> <li>1 - enable network registration unsolicited result code</li> <li>2 - enable network registration unsolicited result code with network Cell identification data</li> </ul> <p>If &lt;mode&gt;=1, network registration result code reports:</p> <pre>+CREG: &lt;stat&gt;</pre> <p>where  <b>&lt;stat&gt;</b></p> <ul style="list-style-type: none"> <li>0 - not registered, ME is not currently searching a new operator to register to</li> <li>1 - registered, home network</li> <li>2 - not registered, but ME is currently searching a new operator to register to</li> <li>3 - registration denied</li> <li>4 - unknown</li> <li>5 - registered, roaming</li> </ul> <p>If &lt;mode&gt;=2, network registration result code reports:</p> <pre>+CREG: &lt;stat&gt;[,&lt;Lac&gt;,&lt;Ci&gt;]</pre> <p>where:  <b>&lt;Lac&gt;</b> - Local Area Code for the currently registered on cell</p>	

+CREG - Network Registration Report		SELINT 0 / 1
	<p>&lt;Ci&gt; - Cell Id for the currently registered on cell</p> <p>Note: &lt;Lac&gt; and &lt;Ci&gt; are reported only if &lt;mode&gt;=2 and the mobile is registered on some network cell.</p> <p>Note: issuing AT+CREG&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT+CREG=&lt;CR&gt; is the same as issuing the command AT+CREG=0&lt;CR&gt;.</p>	
AT+CREG?	<p>Read command reports the &lt;mode&gt; and &lt;stat&gt; parameter values in the format:</p> <p>+CREG: &lt;mode&gt;,&lt;stat&gt;[,&lt;Lac&gt;,&lt;Ci&gt;]</p> <p>Note: &lt;Lac&gt; and &lt;Ci&gt; are reported only if &lt;mode&gt;=2 and the mobile is registered on some network cell.</p>	
AT+CREG=?	Test command returns the range of supported <mode>	
Example	<pre>AT OK at+creg? +CREG: 0,2  OK (the MODULE is in network searching state) at+creg? +CREG: 0,2  OK at+creg? +CREG: 0,2  OK at+creg? +CREG: 0,2 OK at+creg? +CREG: 0,1  OK (the MODULE is registered ) at+creg? +CREG: 0,1  OK</pre>	
Reference	3GPP TS 27.007	

+CREG - Network Registration Report		SELINT 2
AT+CREG=[<mode>]	<p>Set command enables/disables network registration reports depending on the parameter &lt;mode&gt;.</p> <p>Parameter:</p>	

<b>+CREG - Network Registration Report</b>		<b>SELINT 2</b>
	<p><b>&lt;mode&gt;</b></p> <p>0 - disable network registration unsolicited result code (factory default)      1 - enable network registration unsolicited result code      2 - enable network registration unsolicited result code with network Cell identification data</p> <p>If <b>&lt;mode&gt;=1</b>, network registration result code reports:</p> <p style="padding-left: 2em;"><b>+CREG: &lt;stat&gt;</b></p> <p>where</p> <p><b>&lt;stat&gt;</b></p> <p>0 - not registered, ME is not currently searching a new operator to register to      1 - registered, home network      2 - not registered, but ME is currently searching a new operator to register to      3 - registration denied      4 -unknown      5 - registered, roaming</p> <p>If <b>&lt;mode&gt;=2</b>, network registration result code reports:</p> <p style="padding-left: 2em;"><b>+CREG: &lt;stat&gt;[,&lt;Lac&gt;,&lt;Ci&gt;]</b></p> <p>where:</p> <p><b>&lt;Lac&gt;</b> - Local Area Code for the currently registered on cell  <b>&lt;Ci&gt;</b> - Cell Id for the currently registered on cell</p> <p>Note: <b>&lt;Lac&gt;</b> and <b>&lt;Ci&gt;</b> are reported only if <b>&lt;mode&gt;=2</b> and the mobile is registered on some network cell.</p>	
<b>AT+CREG?</b>	Read command reports the <b>&lt;mode&gt;</b> and <b>&lt;stat&gt;</b> parameter values in the format:  <p style="padding-left: 2em;"><b>+CREG: &lt;mode&gt;,&lt;stat&gt;[,&lt;Lac&gt;,&lt;Ci&gt;]</b></p> <p>Note: <b>&lt;Lac&gt;</b> and <b>&lt;Ci&gt;</b> are reported only if <b>&lt;mode&gt;=2</b> and the mobile is registered on some network cell.</p>	
<b>AT+CREG=?</b>	Test command returns the range of supported <b>&lt;mode&gt;</b>	
Example	<pre>AT OK at+creg? +CREG: 0,2  OK (the MODULE is in network searching state) at+creg? +CREG: 0,2  OK at+creg?</pre>	

+CREG - Network Registration Report		SELINT 2
	<pre>+CREG: 0,2 OK at+creg? +CREG: 0,2 OK at+creg? +CREG: 0,1  OK (the MODULE is registered) at+creg? +CREG: 0,1  OK</pre>	
Reference	3GPP TS 27.007	
Note	<p>There are situations in which the presentation of the <b>URC</b> controlled by <b>+CREG</b> is slightly different from ETSI specifications: e.g. it is possible to have an excessive presentation of the <b>URC +CREG: 4</b>. We identified this behaviour and decided to maintain it as default for backward compatibility issues. It is indeed possible to avoid it simply issuing <b>AT#REGMODE=1</b> (see <b>#REGMODE</b>): this puts the <b>Operation Mode of Registration Status Commands</b> in '<b>Enhanced Registration Operation Mode</b>' which is more formal.</p>	

### 3.5.4.3.4. Operator Selection - +COPS

+COPS - Operator Selection		SELINT 0 / 1
<b>AT+COPS[=</b> <b>[&lt;mode&gt;</b> <b>[,&lt;format&gt;</b> <b>[,&lt;oper&gt;]]]</b>	<p>Set command forces an attempt to select and register the GSM network operator.  <b>&lt;mode&gt;</b> parameter defines whether the operator selection is done automatically or it is forced by this command to operator <b>&lt;oper&gt;</b>.          The operator <b>&lt;oper&gt;</b> shall be given in format <b>&lt;format&gt;</b>.</p> <p>The behaviour of <b>+COPS</b> command depends on the last <b>#COPSMODE</b> setting.</p> <p style="text-align: center;">(#COPSMODE=0)</p> <p>Parameters:</p> <p><b>&lt;mode&gt;</b></p> <ul style="list-style-type: none"> <li>0 - automatic choice (the parameter <b>&lt;oper&gt;</b> will be ignored) (factory default)</li> <li>1 - manual choice unlocked (network is kept as long as available, then it can be changed with some other suited networks to guarantee the service)</li> <li>2 - deregister from GSM network; the MODULE is kept unregistered until a <b>+COPS</b> with <b>&lt;mode&gt;=0, 1, 4</b> or <b>5</b> is issued</li> <li>3 - set only <b>&lt;format&gt;</b> parameter (the parameter <b>&lt;oper&gt;</b> will be ignored)</li> <li>4 - manual/automatic (<b>&lt;oper&gt;</b> field shall be present); if manual selection fails, automatic mode (<b>&lt;mode&gt;=0</b>) is entered</li> <li>5 - manual choice locked (network is kept fixed, if the chosen network is not available, then the mobile has no service)</li> </ul>	

+COPS - Operator Selection	SELINT 0 / 1
<p><b>&lt;format&gt;</b>            0 - alphanumeric long form (max length 16 digits)            1 - alphanumeric short form            2 - Numeric 5 or 6 digits [country code (3) + network code (2 or 3)]</p> <p><b>&lt;oper&gt;</b>: network operator in format defined by <b>&lt;format&gt;</b> parameter.</p> <p style="text-align: right;">(#COPSMODE=1)</p> <p>Parameters:</p> <p><b>&lt;mode&gt;</b></p> <ul style="list-style-type: none"> <li>0 - automatic choice (the parameter <b>&lt;oper&gt;</b> will be ignored) (default)</li> <li>1 - manual choice (<b>&lt;oper&gt;</b> field shall be present)</li> <li>2 - deregister from GSM network; the MODULE is kept unregistered until a +COPS with <b>&lt;mode&gt;=0, 1 or 4</b> is issued</li> <li>3 - set only <b>&lt;format&gt;</b> parameter (the parameter <b>&lt;oper&gt;</b> will be ignored)</li> <li>4 - manual/automatic (<b>&lt;oper&gt;</b> field shall be present); if manual selection fails, automatic mode (<b>&lt;mode&gt;=0</b>) is entered</li> </ul> <p><b>&lt;format&gt;</b>            0 - alphanumeric long form (max length 16 digits)            2 - Numeric 5 or 6 digits [country code (3) + network code (2 or 3)]</p> <p><b>&lt;oper&gt;</b>: network operator in format defined by <b>&lt;format&gt;</b> parameter.</p> <p>Note: <b>&lt;mode&gt;</b> parameter setting is stored in NVM and available at next reboot, if it is not <b>3</b> (i.e.: set only <b>&lt;format&gt;</b> parameter).</p> <p>Note: if <b>&lt;mode&gt;=1 or 4</b> (or <b>5</b> if #COPSMODE=0), the selected network is stored in NVM too and is available at next reboot (this will happen even with a new SIM inserted)</p> <p>Note: <b>&lt;format&gt;</b> parameter setting is never stored in NVM</p> <p>Note: issuing <b>AT+COPS&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+COPS=&lt;CR&gt;</b> is the same as issuing the command <b>AT+COPS=0&lt;CR&gt;</b>.</p>	
<b>AT+COPS?</b>	Read command returns current value of <b>&lt;mode&gt;</b> , <b>&lt;format&gt;</b> and <b>&lt;oper&gt;</b> in format <b>&lt;format&gt;</b> ; if no operator is selected, <b>&lt;format&gt;</b> and <b>&lt;oper&gt;</b> are omitted
<b>+COPS: &lt;mode&gt;[,&lt;format&gt;,&lt;oper&gt;]</b>	
<b>AT+COPS=?</b>	Test command returns a list of quadruplets, each representing an operator present in the network.

+COPS - Operator Selection	SELINT 0 / 1
	<p>The behaviour of Test command depends on the last #COPSMODE setting.</p> <p style="text-align: center;"><b>(#COPSMODE=0)</b></p> <p>The command outputs as many rows as the number of quadruplets, each of them in the format:</p> <pre>+COPS: (&lt;stat&gt;,&lt;oper (in &lt;format&gt;=0)&gt;,"", &lt;oper (in &lt;format&gt;=2)&gt;)</pre> <p>where</p> <p>&lt;stat&gt; - operator availability</p> <ul style="list-style-type: none"> <li>0 - unknown</li> <li>1 - available</li> <li>2 - current</li> <li>3 - forbidden</li> </ul> <p style="text-align: center;"><b>(#COPSMODE=1)</b></p> <p>The quadruplets in the list are separated by commas:</p> <pre>+COPS: [list of supported (&lt;stat&gt;,&lt;oper (in &lt;format&gt;=0)&gt;,,, &lt;oper (in &lt;format&gt;=2)&gt;)s][,(list of supported &lt;mode&gt;s), (list of supported&lt;format&gt;s)]</pre> <p>where</p> <p>&lt;stat&gt; - operator availability</p> <ul style="list-style-type: none"> <li>0 - unknown</li> <li>1 - available</li> <li>2 - current</li> <li>3 - forbidden</li> </ul> <p>Note: since with this command a network scan is done, this command may require some seconds before the output is given.</p> <p>Note: The value of parameter &lt;oper&gt; (in &lt;format&gt;=0) is the same as the former GM862 family products.</p>
Reference	3GPP TS 27.007

+COPS - Operator Selection	SELINT 2
AT+COPS= [<mode> [,<format> ,<oper>]]]	<p>Set command forces an attempt to select and register the GSM network operator.</p> <p>&lt;mode&gt; parameter defines whether the operator selection is done automatically or it is forced by this command to operator &lt;oper&gt;.</p> <p>The operator &lt;oper&gt; shall be given in format &lt;format&gt;.</p> <p>Parameters:</p> <p>&lt;mode&gt;</p>

+COPS - Operator Selection	SELINT 2
	<p>0 - automatic choice (the parameter &lt;oper&gt; will be ignored) (factory default)          1 - manual choice (&lt;oper&gt; field shall be present)          2 - deregister from GSM network; the MODULE is kept unregistered until a +COPS with &lt;mode&gt;=0, 1 or 4 is issued          3 - set only &lt;format&gt; parameter (the parameter &lt;oper&gt; will be ignored)          4 - manual/automatic (&lt;oper&gt; field shall be present); if manual selection fails, automatic mode (&lt;mode&gt;=0) is entered</p> <p>&lt;format&gt;          0 - alphanumeric long form (max length 16 digits)          2 - Numeric 5 or 6 digits [country code (3) + network code (2 or 3)]</p> <p>&lt;oper&gt;: network operator in format defined by &lt;format&gt; parameter.</p> <p>Note: &lt;mode&gt; parameter setting is stored in NVM and available at next reboot, if it is not 3 (i.e.: set only &lt;format&gt; parameter).</p> <p>Note: if &lt;mode&gt;=1 or 4, the selected network is stored in NVM too and is available at next reboot (this will happen even with a new SIM inserted)</p> <p>Note: &lt;format&gt; parameter setting is never stored in NVM</p>
AT+COPS?	<p>Read command returns current value of &lt;mode&gt;, &lt;format&gt; and &lt;oper&gt; in format &lt;format&gt;; if no operator is selected, &lt;format&gt; and &lt;oper&gt; are omitted</p> <p>+COPS: &lt;mode&gt;[, &lt;format&gt;, &lt;oper&gt;]</p>
AT+COPS=?	<p>Test command returns a list of quadruplets, each representing an operator present in the network.          The quadruplets in the list are separated by commas:</p> <p>+COPS: [list of supported (&lt;stat&gt; ,&lt;oper (in &lt;format&gt;=0)&gt;,,&lt;oper (in &lt;format&gt;=2)&gt;)s][,(list of supported &lt;mode&gt;s), (list of supported&lt;format&gt;s)]</p> <p>where          &lt;stat&gt; - operator availability          0 - unknown          1 - available          2 - current          3 - forbidden</p> <p>Note: since with this command a network scan is done, this command may require some seconds before the output is given.</p>

<b>@CLCK - Facility Improved Lock/Unlock</b>		<b>SELINT 0 / 1</b>
<b>AT@CLCK=</b> <b>&lt;fac&gt;,&lt;mode&gt;</b> $[,<\text{passwd}>]$ $[,<\text{class}>]]$	<p>Execution command is used to lock or unlock a <b>ME</b> or a network facility.</p> <p>Parameters:</p> <p><b>&lt;fac&gt;</b> - facility</p> <ul style="list-style-type: none"> <li>"SC" - SIM (PIN request) (device asks SIM password at power-up and when this lock command issued)</li> <li>"AO"- BAOC (Barr All Outgoing Calls)</li> <li>"OI" - BOIC (Barr Outgoing International Calls)</li> <li>"OX" - BOIC-exHC (Barr Outgoing International Calls except to Home Country)</li> <li>"AI" - BAIC (Barr All Incoming Calls)</li> <li>"IR" - BIC-Roam (Barr Incoming Calls when Roaming outside the home country)</li> <li>"AB" - All Barring services (applicable only for &lt;mode&gt;=0)</li> <li>"AG" - All outGoing barring services (applicable only for &lt;mode&gt;=0)</li> <li>"AC" - All inComing barring services (applicable only for &lt;mode&gt;=0)</li> <li>"FD" - SIM fixed dialling memory feature (if PIN2 authentication has not been done during the current session, PIN2 is required as &lt;passwd&gt;)</li> <li>"PN" - network Personalisation</li> <li>"PU" - network subset Personalisation</li> </ul> <p><b>&lt;mode&gt;</b> - defines the operation to be done on the facility</p> <ul style="list-style-type: none"> <li>0 - unlock facility</li> <li>1 - lock facility</li> <li>2 - query status</li> </ul>	

<b>@CLCK - Facility Improved Lock/Unlock</b>		<b>SELINT 0 / 1</b>
	<p>&lt;passwd&gt; - shall be the same as password specified for the facility from the <b>DTE</b> user interface or with command Change Password +CPWD</p> <p>&lt;class&gt; - sum of integers each representing a class of information (default is 7)</p> <ul style="list-style-type: none"> <li>1 - voice (telephony)</li> <li>2 - data (refers to all bearer services)</li> <li>4 - fax (facsimile services)</li> <li>8 - short message service</li> <li>16 - data circuit sync</li> <li>32 - data circuit async</li> <li>64 - dedicated packet access</li> <li>128 - dedicated PAD access</li> </ul> <p>Note: when &lt;mode&gt;=2 and command successful, it returns:  <b>@CLCK: &lt;status&gt;[,&lt;class1&gt;</b>  <b> &lt;CR&gt;&lt;LF&gt;@CLCK: &lt;status&gt;,&lt;class2&gt;[...]]</b></p> <p>where</p> <p>&lt;status&gt; - the current status of the facility</p> <ul style="list-style-type: none"> <li>0 - not active</li> <li>1 - active</li> </ul> <p>&lt;classn&gt; - class of information of the facility</p>	
<b>AT@CLCK=?</b>	Test command reports all the facilities supported by the device.	
<b>Reference</b>	3GPP TS 27.007	
<b>Example</b>	<p><i>Querying such a facility returns an output on three rows, the first for voice, the second for data, the third for fax:</i></p> <pre>AT@CLCK =”AO”,2 @CLCK: &lt;status&gt;,1 @CLCK: &lt;status&gt;,2 @CLCK: &lt;status&gt;,4 OK</pre>	

### 3.5.4.3.7. Change Facility Password - +CPWD

<b>+CPWD - Change Facility Password</b>		<b>SELINT 0 / 1</b>
<b>AT+CPWD=&lt;fac&gt;,&lt;oldpwd&gt;,&lt;newpwd&gt;</b>	Execution command changes the password for the facility lock function defined by command Facility Lock +CLCK.	

<b>+CPWD - Change Facility Password</b>		<b>SELINT 0 / 1</b>
	<p>&lt;oldpwd&gt; - string type, it shall be the same as password specified for the facility from the ME user interface or with command +CPWD.</p> <p>&lt;newpwd&gt; - string type, it is the new password</p> <p>Note: parameter &lt;oldpwd&gt; is the old password while &lt;newpwd&gt; is the new one.</p>	
<b>AT+CPWD=?</b>	Test command returns a list of pairs (<fac>,<pwdlength>) which presents the available facilities and the maximum length of their password (<pwdlength>)	
Example	at+cpwd=? +CPWD: ("SC",8),("AB",4),("P2",4)  OK	
Reference	3GPP TS 27.007	

<b>+CPWD - Change Facility Password</b>		<b>SELINT 2</b>
<b>AT+CPWD=&lt;fac&gt;,&lt;oldpwd&gt;,&lt;newpwd&gt;</b>	<p>Execution command changes the password for the facility lock function defined by command Facility Lock +CLCK.</p> <p>Parameters:</p> <p>&lt;fac&gt; - facility “SC” - SIM (PIN request) “AB” - All barring services “P2” - SIM PIN2 “PS” - SIM VO</p> <p>&lt;oldpwd&gt; - string type, it shall be the same as password specified for the facility from the ME user interface or with command +CPWD.</p> <p>&lt;newpwd&gt; - string type, it is the new password</p> <p>Note: parameter &lt;oldpwd&gt; is the old password while &lt;newpwd&gt; is the new one.</p>	
<b>AT+CPWD=?</b>	Test command returns a list of pairs (<fac>,<pwdlength>) which presents the available facilities and the maximum length of their password (<pwdlength>)	
Example	at+cpwd=? +CPWD: ("SC",8),("AB",4),("P2",8),("PS",8)  OK	
Reference	3GPP TS 27.007	

### 3.5.4.3.8. Calling Line Identification Presentation - +CLIP

<b>+CLIP - Calling Line Identification Presentation</b>		<b>SELINT 0 / 1</b>
<b>AT+CLIP[=[&lt;n&gt;]]</b>	Set command enables/disables the presentation of the CLI (Calling Line Identity) at the TE. This command refers to the GSM supplementary service CLIP (Calling Line Identification Presentation) that enables a called subscriber to get the CLI of the calling party when receiving a mobile terminated call.	

Parameters:

<b>+CLIP - Calling Line Identification Presentation</b>		<b>SELINT 0 / 1</b>
	<p><b>&lt;n&gt;</b></p> <p>0 - disables CLI indication (factory default) 1 - enables CLI indication</p> <p>If enabled the device reports after each <b>RING</b> the response:</p> <p><b>+CLIP: &lt;number&gt;,&lt;type&gt;,"",128,&lt;alpha&gt;,&lt;CLI_validity&gt;</b></p> <p>where:</p> <p><b>&lt;number&gt;</b> - string type phone number of format specified by <b>&lt;type&gt;</b></p> <p><b>&lt;type&gt;</b> - type of address octet in integer format</p> <ul style="list-style-type: none"> <li>128 - both the type of number and the numbering plan are unknown</li> <li>129 - unknown type of number and ISDN/Telephony numbering plan</li> <li>145 - international type of number and ISDN/Telephony numbering plan (contains the character "+")</li> </ul> <p><b>&lt;alpha&gt;</b> - string type; alphanumeric representation of <b>&lt;number&gt;</b> corresponding to the entry found in phonebook; used character set should be the one selected with command Select TE character set <b>+CSCS</b>.</p> <p><b>&lt;CLI_validity&gt;</b></p> <ul style="list-style-type: none"> <li>0 - CLI valid</li> <li>1 - CLI has been withheld by the originator.</li> <li>2 - CLI is not available due to interworking problems or limitation or originating network.</li> </ul> <p>Note: in the <b>+CLIP:</b> response they are currently not reported either the <b>subaddress</b> information (it's always "" after the 2<sup>nd</sup> comma) and the <b>subaddress type</b> information (it's always <b>128</b> after the 3<sup>rd</sup> comma)</p> <p>Note: issuing <b>AT+CLIP&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+CLIP=&lt;CR&gt;</b> is the same as issuing the command <b>AT+CLIP=0&lt;CR&gt;</b>.</p>	
<b>AT+CLIP?</b>	<p>Read command returns the presentation status of the CLI in the format:</p> <p><b>+CLIP: &lt;n&gt;,&lt;m&gt;</b></p> <p>where:</p> <p><b>&lt;n&gt;</b></p> <ul style="list-style-type: none"> <li>0 - CLI presentation disabled</li> <li>1 - CLI presentation enabled</li> </ul> <p><b>&lt;m&gt;</b> - status of the CLIP service on the GSM network</p> <ul style="list-style-type: none"> <li>0 - CLIP not provisioned</li> <li>1 - CLIP provisioned</li> <li>2 - unknown (e.g. no network is present )</li> </ul>	

<b>+CLIP - Calling Line Identification Presentation</b>		<b>SELINT 0 / 1</b>
		Note: This command issues a status request to the network, hence it may take a few seconds to give the answer due to the time needed to exchange data with it.
<b>AT+CLIP=?</b>	Test command returns the supported values of the parameter <n>	
Reference	3GPP TS 27.007	
Note	The command changes only the report behaviour of the device, it does not change CLI supplementary service setting on the network.	

<b>+CLIP - Calling Line Identification Presentation</b>		<b>SELINT 2</b>
<b>AT+CLIP=[&lt;n&gt;]</b>	<p>Set command enables/disables the presentation of the CLI (Calling Line Identity) at the <b>TE</b>. This command refers to the GSM supplementary service CLIP (Calling Line Identification Presentation) that enables a called subscriber to get the CLI of the calling party when receiving a mobile terminated call.</p> <p>Parameters:</p> <p>&lt;n&gt;</p> <p>0 - disables CLI indication (factory default) 1 - enables CLI indication</p> <p>If enabled the device reports after each RING the response:</p> <p><b>+CLIP: &lt;number&gt;,&lt;type&gt;,"",128,&lt;alpha&gt;,&lt;CLI_validity&gt;</b></p> <p>where:</p> <p>&lt;number&gt; - string type phone number of format specified by &lt;type&gt; &lt;type&gt; - type of address octet in integer format</p> <ul style="list-style-type: none"> <li>128 - both the type of number and the numbering plan are unknown</li> <li>129 - unknown type of number and ISDN/Telephony numbering plan</li> <li>145 - international type of number and ISDN/Telephony numbering plan (contains the character "+")</li> </ul> <p>&lt;alpha&gt; - string type; alphanumeric representation of &lt;number&gt; corresponding to the entry found in phonebook; used character set should be the one selected with command Select <b>TE</b> character set <b>+CSCS</b>.</p> <p>&lt;CLI_validity&gt;</p> <p>0 - CLI valid 1 - CLI has been withheld by the originator. 2 - CLI is not available due to interworking problems or limitation or originating network.</p> <p>Note: in the <b>+CLIP:</b> response they are currently not reported either the <b>subaddress</b> information (it's always "" after the 2<sup>nd</sup> comma) and the <b>subaddress type</b> information (it's always <b>128</b> after the 3<sup>rd</sup> comma)</p>	
<b>AT+CLIP?</b>	<p>Read command returns the presentation status of the CLI in the format:</p> <p><b>+CLIP: &lt;n&gt;,&lt;m&gt;</b></p>	

<b>+CLIP - Calling Line Identification Presentation</b>		<b>SELINT 2</b>
	<p>where:</p> <p>&lt;n&gt;</p> <p>0 - CLI presentation disabled 1 - CLI presentation enabled</p> <p>&lt;m&gt; - status of the CLIP service on the GSM network</p> <p>0 - CLIP not provisioned 1 - CLIP provisioned 2 - unknown (e.g. no network is present )</p>	
		<p>Note: This command issues a status request to the network, hence it may take a few seconds to give the answer due to the time needed to exchange data with it.</p>
<b>AT+CLIP=?</b>	Test command returns the supported values of parameter <n>	
Reference	3GPP TS 27.007	
Note	The command changes only the report behaviour of the device, it does not change CLI supplementary service setting on the network.	

### 3.5.4.3.9. Calling Line Identification Restriction - +CLIR

<b>+CLIR - Calling Line Identification Restriction</b>		<b>SELINT 0 / 1</b>
<b>AT+CLIR[=&lt;n&gt;]]</b>	<p>Set command overrides the CLIR subscription when temporary mode is provisioned as a default adjustment for all following outgoing calls. This adjustment can be revoked by using the opposite command.</p> <p>This command refers to CLIR-service (GSM 02.81) that allows a calling subscriber to enable or disable the presentation of the CLI to the called party when originating a call.</p> <p>Parameter:</p> <p>&lt;n&gt; - facility status on the Mobile</p> <p>0 - CLIR facility according to CLIR service network status 1 - CLIR facility active (CLI not sent) 2 - CLIR facility not active (CLI sent)</p>	
	<p>Note: issuing <b>AT+CLIR&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+CLIR=&lt;CR&gt;</b> is the same as issuing the command <b>AT+CLIR=0&lt;CR&gt;</b>.</p>	
<b>AT+CLIR?</b>	<p>Read command gives the default adjustment for all outgoing calls (&lt;n&gt;) and also triggers an interrogation of the provision status of the CLIR service (&lt;m&gt;), where</p> <p>&lt;n&gt; - facility status on the Mobile</p> <p>0 - CLIR facility according to CLIR service network status 1 - CLIR facility active (CLI not sent) 2 - CLIR facility not active (CLI sent)</p> <p>&lt;m&gt; - facility status on the Network</p>	

<b>+CLIR - Calling Line Identification Restriction</b>		<b>SELINT 0 / 1</b>
	0 - CLIR service not provisioned 1 - CLIR service provisioned permanently 2 - unknown (e.g. no network present, etc.) 3 - CLI temporary mode presentation restricted 4 - CLI temporary mode presentation allowed	
<b>AT+CLIR=?</b>	Test command reports the supported values of parameter <n>.	
Reference	3GPP TS 27.007	
Note	This command sets the default behaviour of the device in outgoing calls.	

<b>+CLIR - Calling Line Identification Restriction</b>		<b>SELINT 2</b>
<b>AT+CLIR=[&lt;n&gt;]</b>	Set command overrides the CLIR subscription when temporary mode is provisioned as a default adjustment for all following outgoing calls. This adjustment can be revoked by using the opposite command. This command refers to CLIR-service (GSM 02.81) that allows a calling subscriber to enable or disable the presentation of the CLI to the called party when originating a call.  Parameter: <n> - facility status on the Mobile 0 - CLIR facility according to CLIR service network status 1 - CLIR facility active (CLI not sent) 2 - CLIR facility not active (CLI sent)	
<b>AT+CLIR?</b>	Read command gives the default adjustment for all outgoing calls (<n>) and also triggers an interrogation of the provision status of the CLIR service (<m>), where <n> - facility status on the Mobile 0 - CLIR facility according to CLIR service network status 1 - CLIR facility active (CLI not sent) 2 - CLIR facility not active (CLI sent)  <m> - facility status on the Network 0 - CLIR service not provisioned 1 - CLIR service provisioned permanently 2 - unknown (e.g. no network present, etc.) 3 - CLI temporary mode presentation restricted 4 - CLI temporary mode presentation allowed	
<b>AT+CLIR=?</b>	Test command reports the supported values of parameter <n>.	
Reference	3GPP TS 27.007	
Note	This command sets the default behaviour of the device in outgoing calls.	

### 3.5.4.3.10. Call Forwarding Number And Conditions - +CCFC

<b>+CCFC - Call Forwarding Number And Condition</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+CCFC=</b>	Execution command controls the call forwarding supplementary service.	

<b>+CCFC - Call Forwarding Number And Condition</b>		<b>SELINT 0 / 1 / 2</b>
<p>&lt;reason&gt;,  &lt;cmd&gt;[,&lt;number&gt;[,&lt;type&gt;[,&lt;class&gt;[,,&lt;time&gt;]]]]</p> <p>Parameters:</p> <p>&lt;reason&gt;</p> <ul style="list-style-type: none"> <li>0 - unconditional</li> <li>1 - mobile busy</li> <li>2 - no reply</li> <li>3 - not reachable</li> <li>4 - all calls (not with query command)</li> <li>5 - all conditional calls (not with query command)</li> </ul> <p>&lt;cmd&gt;</p> <ul style="list-style-type: none"> <li>0 - disable</li> <li>1 - enable</li> <li>2 - query status</li> <li>3 - registration</li> <li>4 - erasure</li> </ul> <p>&lt;number&gt; - string type phone number of forwarding address in format specified by &lt;type&gt; parameter</p> <p>&lt;type&gt; - type of address octet in integer format :</p> <ul style="list-style-type: none"> <li>129 - national numbering scheme</li> <li>145 - international numbering scheme (contains the character "+")</li> </ul> <p>&lt;class&gt; - sum of integers each representing a class of information which the command refers to; default 7 (voice + data + fax)</p> <ul style="list-style-type: none"> <li>1 - voice (telephony)</li> <li>2 - data</li> <li>4 - fax (facsimile services)</li> <li>8 - short message service</li> <li>16 - data circuit sync</li> <li>32 - data circuit async</li> <li>64 - dedicated packet access</li> <li>128 - dedicated PAD access</li> </ul> <p>&lt;time&gt; - time in seconds to wait before call is forwarded; it is valid only when &lt;reason&gt; "no reply" is enabled (&lt;cmd&gt;=1) or queried (&lt;cmd&gt;=2)  1..30 - automatically rounded to a multiple of 5 seconds (default is 20)</p> <p>Note: when &lt;cmd&gt;=2 and command successful, it returns:</p> <p>+CCFC: &lt;status&gt;,&lt;class1&gt;[,&lt;number&gt;,&lt;type&gt;[,,&lt;time&gt;]][&lt;CR&gt;&lt;LF&gt;  +CCFC: &lt;status&gt;,&lt;class2&gt;[,&lt;number&gt;,&lt;type&gt;[,,&lt;time&gt;]][ ... ]]</p> <p>where:</p> <p>&lt;status&gt; - current status of the network service</p>		

<b>+CCFC - Call Forwarding Number And Condition</b>		<b>SELINT 0 / 1 / 2</b>
	0 - not active 1 - active <b>&lt;classn&gt;</b> - same as <b>&lt;class&gt;</b> <b>&lt;time&gt;</b> - it is returned only when <b>&lt;reason&gt;</b> =2 ("no reply") and <b>&lt;cmd&gt;</b> =2.  The other parameters are as seen before.	
<b>AT+CCFC=?</b>	Test command reports supported values for the parameter <b>&lt;reason&gt;</b> .	
Reference	3GPP TS 27.007	
Note	When querying the status of a network service ( <b>&lt;cmd&gt;</b> =2) the response line for 'not active' case ( <b>&lt;status&gt;</b> =0) should be returned only if service is not active for any <b>&lt;class&gt;</b> .	

### 3.5.4.3.11. Call Waiting - +CCWA

<b>+CCWA - Call Waiting</b>		<b>SELINT 0 / 1</b>
<b>AT+CCWA[=</b> <b>[&lt;n&gt;[,&lt;cmd&gt;</b> <b>,&lt;class&gt;]]]</b>	Set command allows the control of the call waiting supplementary service. Activation, deactivation, and status query are supported.  Parameters: <b>&lt;n&gt;</b> - enables/disables the presentation of an unsolicited result code: 0 - disable 1 - enable <b>&lt;cmd&gt;</b> - enables/disables or queries the service at network level: 0 - disable 1 - enable 2 - query status <b>&lt;class&gt;</b> - is a sum of integers each representing a class of information which the command refers to; default is 7 ( <b>voice + data + fax</b> ) 1 - voice (telephony) 2 - data 4 - fax (facsimile services) 8 - short message service 16 - data circuit sync 32 - data circuit async 64 - dedicated packet access 128 - dedicated PAD access  Note: the response to the query command is in the format:  <b>+CCWA: &lt;status&gt;,&lt;class1&gt;[&lt;CR&gt;&lt;LF&gt;</b> <b>+CCWA: &lt;status&gt;,&lt;class2&gt;[ ... ]]</b>  where <b>&lt;status&gt;</b> represents the status of the service: 0 - inactive 1 - active	

<b>+CCWA - Call Waiting</b>		<b>SELINT 0 / 1</b>
	<p>&lt;classn&gt; - same as &lt;class&gt;</p> <p>Note: the unsolicited result code enabled by parameter &lt;n&gt; is in the format:</p> <p>+CCWA: &lt;number&gt;,&lt;type&gt;,&lt;class&gt;,&lt;alpha&gt;,&lt;cli_validity&gt;</p> <p>where</p> <p>&lt;number&gt; - string type phone number of calling address in format specified by &lt;type&gt;</p> <p>&lt;type&gt; - type of address in integer format</p> <p>&lt;class&gt; - see before</p> <p>&lt;alpha&gt; - string type; alphanumeric representation of &lt;number&gt; corresponding to the entry found in phonebook; used character set should be the one selected with +CSCS.</p> <p>&lt;cli_validity&gt;</p> <p>0 - CLI valid</p> <p>1 - CLI has been withheld by the originator</p> <p>2 - CLI is not available due to interworking problems or limitations of originating network</p>	
	<p>Note: if parameter &lt;cmd&gt; is omitted then network is not interrogated.</p> <p>Note: in the query command the class parameter must not be issued.</p> <p>Note: the difference between call waiting report disabling (AT+CCWA = 0,1,7) and call waiting service disabling (AT+CCWA = 0,0,7) is that in the first case the call waiting indication is sent to the device by network but this last one does not report it to the DTE; instead in the second case the call waiting indication is not generated by the network. Hence the device results busy to the third party in the 2<sup>nd</sup> case while in the 1<sup>st</sup> case a ringing indication is sent to the third party.</p> <p>Note: The command AT+CCWA=1,0 has no effect a non sense and must not be issued.</p> <p>Note: issuing AT+CCWA&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT+CCWA=&lt;CR&gt; is the same as issuing the command AT+CCWA=0&lt;CR&gt;.</p>	
AT+CCWA?	Read command reports the current value of the parameter <n>.	
AT+CCWA=?	Test command reports the supported values for the parameter <n>.

### 3.5.4.3.18. Preferred Operator List - +CPOL

+CPOL - Preferred Operator List		SELINT 2
AT+CPOL= [<index>][,<format> [,<oper>]]	Execution command writes an entry in the SIM list of preferred operators.  Parameters:  <index> - integer type; the order number of operator in the SIM preferred operator list 1..n  <format> 2 - numeric <oper> <oper> - string type  Note: if <index> is given but <oper> is left out, entry is deleted. If <oper> is given but <index> is left out, <oper> is put in the next free location. If only <format> is given, the format of the <oper> in the read command is changed.	
AT+CPOL?	Read command returns all used entries from the SIM list of preferred operators.	
AT+CPOL=?	Test command returns the whole <index> range supported by the SIM and the range for the parameter <format>	

<b>+CPOL - Preferred Operator List</b>	<b>SELINT 2</b>
Reference	3GPP TS 27.007

### 3.5.4.3.19. Selection of preferred PLMN list - +CPLS

<b>+CPLS – Selection of preferred PLMN list</b>	<b>SELINT 2</b>
<b>AT+CPLS=&lt;list&gt;</b>	<p>The execution command is used to select a list of preferred PLMNs in the SIM/USIM.</p> <p>Parameters:</p> <p><b>&lt;list&gt;:</b></p> <ul style="list-style-type: none"> <li>0 - User controlled PLMN selector with Access Technology EFPLMNwAcT, if not found in the SIM/UICC then PLMN preferred list EFPLMNsel (this file is only available in SIM card or GSM application selected in UICC)</li> <li>1 - Operator controlled PLMN selector with Access Technology EFOPLMNwAcT</li> <li>2 - HPLMN selector with Access Technology EFHPLMNwAcT</li> </ul> <p>Note: the value set by command is directly stored in NVM and doesn't depend on the specific CMUX instance.</p>
<b>AT+CPLS?</b>	Read command returns the selected PLMN selector <list> from the SIM/USIM.
<b>AT+CPLS=?</b>	Test command returns the whole index range supported <list>s by the SIM/USIM.

### 3.5.4.3.20. Call deflection - +CTFR

<b>+CTFR – Call deflection</b>	<b>SELINT 2</b>
<b>AT+CTFR=&lt;number&gt;[,&lt;type&gt;]</b>	<p>Set command is used to request a service that causes an incoming alerting call to be forwarded to a specified number. This is based on the GSM/UMTS supplementary service CD (Call Deflection; refer 3GPP TS 22.072).</p> <p>Parameters:</p> <p><b>&lt;number&gt;:</b> string type phone number of format specified by <b>&lt;type&gt;</b></p> <p><b>&lt;type&gt;:</b> type of address octet in integer format; default 145 when dialling string includes international access code character "+", otherwise 129</p> <p>Note: Call Deflection is only applicable to an incoming voice call</p>
<b>AT+CTFR=?</b>	Test command tests for command existence

### 3.5.4.4. Mobile Equipment Control

#### 3.5.4.4.1. Phone Activity Status - +CPAS

<b>+CPAS - Phone Activity Status</b>		<b>SELINT 0 / 1</b>
AT+CPAS	<p>Execution command reports the device status in the form:</p> <p><b>+CPAS: &lt;pas&gt;</b></p> <p>Where:</p> <p>&lt;pas&gt; - phone activity status</p> <ul style="list-style-type: none"> <li>0 - ready (device allows commands from <b>TA/TE</b>)</li> <li>1 - unavailable (device does not allow commands from <b>TA/TE</b>)</li> <li>2 - unknown (device is not guaranteed to respond to instructions)</li> <li>3 - ringing (device is ready for commands from <b>TA/TE</b>, but the ringer is active)</li> <li>4 - call in progress (device is ready for commands from <b>TA/TE</b>, but a call is in progress)</li> </ul>	
AT+CPAS?	Read command has the same effect as Execution command.	
AT+CPAS=?	<p>Test command reports the supported range of values for &lt;pas&gt;.</p> <p>Note: although <b>+CPAS</b> is an execution command, ETSI 07.07 requires the Test command to be defined.</p>	
Reference	3GPP TS 27.007	

<b>+CPAS - Phone Activity Status</b>		<b>SELINT 2</b>
AT+CPAS	<p>Execution command reports the device status in the form:</p> <p><b>+CPAS: &lt;pas&gt;</b></p> <p>Where:</p> <p>&lt;pas&gt; - phone activity status</p> <ul style="list-style-type: none"> <li>0 - ready (device allows commands from <b>TA/TE</b>)</li> <li>1 - unavailable (device does not allow commands from <b>TA/TE</b>)</li> <li>2 - unknown (device is not guaranteed to respond to instructions)</li> <li>3 - ringing (device is ready for commands from <b>TA/TE</b>, but the ringer is active)</li> <li>4 - call in progress (device is ready for commands from <b>TA/TE</b>, but a call is in progress)</li> </ul>	
AT+CPAS=?	<p>Test command reports the supported range of values for &lt;pas&gt;.</p> <p>Note: although <b>+CPAS</b> is an execution command, ETSI 07.07 requires the Test command to be defined.</p>	
Example	<p>ATD03282131321;  OK  AT+CPAS  +CPAS: 4</p> <p style="text-align: right;"><i>the called phone has answered to your call</i></p> <p>OK  ATH</p>	

<b>+CPAS - Phone Activity Status</b>	<b>SELINT 2</b>
	OK
Reference	3GPP TS 27.007

### 3.5.4.4.2. Set Phone Functionality - +CFUN

<b>+CFUN - Set Phone Functionality</b>	<b>SELINT 0 / 1</b>
<b>AT+CFUN=&lt;fun&gt;</b>  Set command selects the level of functionality in the ME.  Parameter: <fun> - is the power saving function mode 0 - minimum functionality, NON-CYCLIC SLEEP mode: in this mode, the AT interface is not accessible. Consequently, once you have set <fun> level 0, do not send further characters. Otherwise these characters remain in the input buffer and may delay the output of an unsolicited result code. The first wake-up event, or rising RTS line, stops power saving and takes the ME back to full functionality level <fun>=1. 1 - mobile full functionality with power saving disabled (factory default) 2 - disable TX 4 - disable either TX and RX 5 - mobile full functionality with power saving enabled  Note: issuing <b>AT+CFUN=4</b> actually causes the module to perform either a network deregistration and a SIM deactivation.  Note: if power saving enabled, it reduces the power consumption during the idle time, thus allowing a longer standby time with a given battery capacity.  Note: to place the module in power saving mode, set the <fun> parameter at value = 5 and the line <b>DTR</b> (RS232) must be set to <b>OFF</b> . Once in power saving, the <b>CTS</b> line switch to the <b>OFF</b> status to signal that the module is really in power saving condition. During the power saving condition, before sending any AT command on the serial line, the <b>DTR</b> must be set to <b>ON</b> (0V) to exit from power saving and must be waited for the <b>CTS</b> (RS232) line to go in <b>ON</b> status. Until the <b>DTR</b> line is <b>ON</b> , the module will not return back in the power saving condition.  Note: the power saving function does not affect the network behavior of the MODULE, even during the power save condition the module remains registered on the network and reachable for incoming calls or SMS. If a call arrives during the power save, then the module will wake up and proceed normally with the unsolicited incoming call code	<b>SELINT 0 / 1</b>
<b>AT+CFUN?</b>	Read command reports the current level of functionality.
<b>AT+CFUN=?</b>	Test command returns the list of supported values for <fun>  For compatibility with previous versions, Test command returns

<b>+CFUN - Set Phone Functionality</b>		<b>SELINT 0 / 1</b>
	+CFUN: (1, 5)  An enhanced version of Test command has been defined: <b>AT+CFUN=??</b> , that provides the complete range of values for <fun>.	
<b>AT+CFUN=??</b>	Enhanced test command returns the list of supported values for <fun>	
Reference	3GPP TS 27.007	

<b>+CFUN - Set Phone Functionality</b>		<b>SELINT 2</b>
<b>AT+CFUN= [&lt;fun&gt;[,&lt;rst&gt;]]</b>	<p>Set command selects the level of functionality in the ME.</p> <p>Parameters:</p> <p>&lt;fun&gt; - is the power saving function mode</p> <p>0 - minimum functionality, NON-CYCLIC SLEEP mode: in this mode, the AT interface is not accessible. Consequently, once you have set &lt;fun&gt; level 0, do not send further characters. Otherwise these characters remain in the input buffer and may delay the output of an unsolicited result code. The first wake-up event, or rising <b>RTS</b> line, stops power saving and takes the ME back to full functionality level &lt;fun&gt;=1.</p> <p>1 - mobile full functionality with power saving disabled (factory default)</p> <p>2 - disable TX</p> <p>4 - disable both TX and RX</p> <p>5 - mobile full functionality with power saving enabled</p> <p>7 - CYCLIC SLEEP mode: in this mode, the serial interface is periodically enabled while CTS is active. If characters are recognized on the serial interface, the ME stays active for 2 seconds after the last character was sent or received.</p> <p>ME exits SLEEP mode only, if AT+CFUN=1 is entered</p> <p>9 – just as 0 but with different wake-up events (see SW User Guide)</p> <p>&lt;rst&gt; - reset flag</p> <p>0 - do not reset the ME before setting it to &lt;fun&gt; functionality level</p> <p>1 – reset the device. The device is fully functional after the reset. This value is available only for &lt;fun&gt; = 1. The parameter &lt;rst&gt; is not supported by all products or software versions; to be sure check it with the test command.</p> <p>Note: issuing <b>AT+CFUN=4[,0]</b> actually causes the module to perform either a network deregistration and a SIM deactivation.</p> <p>Note: if power saving enabled, it reduces the power consumption during the idle time, thus allowing a longer standby time with a given battery capacity.</p> <p>Note: to place the module in power saving mode, set the &lt;fun&gt; parameter at value = 5 and the line <b>DTR</b> (RS232) must be set to <b>OFF</b>. Once in power saving, the <b>CTS</b> line switch to the <b>OFF</b> status to signal that the module is really in power saving condition.</p> <p>During the power saving condition, before sending any <b>AT</b> command on the serial</p>	

<b>+CFUN - Set Phone Functionality</b>		<b>SELINT 2</b>
	<p>line, the <b>DTR</b> must be set to ON (0V) to exit from power saving and it must be waited for the <b>CTS</b> (RS232) line to go in <b>ON</b> status.</p> <p>Until the <b>DTR</b> line is <b>ON</b>, the module will not return back in the power saving condition.</p> <p>Note: the power saving function does not affect the network behaviour of the MODULE, even during the power save condition the module remains registered on the network and reachable for incoming calls or SMS. If a call incomes during the power save, then the module will wake up and proceed normally with the unsolicited incoming call code</p>	
<b>AT+CFUN?</b>	Read command reports the current setting of <fun>.	
<b>AT+CFUN=?</b>	Test command returns the list of supported values for <fun> and <rst>.	
Reference	3GPP TS 27.007	

#### 3.5.4.4.3. Enter PIN - +CPIN

<b>+CPIN - Enter PIN</b>		<b>SELINT 0 / 1</b>
<b>AT+CPIN[=&lt;pin&gt; [,&lt;newpin&gt;]]</b>	<p>Set command sends to the device a password which is necessary before it can be operated (SIM PIN, SIM PUK, PH-SIM PIN, etc.).</p> <p>If the PIN required is SIM PUK or SIM PUK2, the &lt;newpin&gt; is required. This second pin, &lt;newpin&gt;, will replace the old pin in the SIM.</p> <p>The command may be used to change the SIM PIN by sending it with both parameters &lt;pin&gt; and &lt;newpin&gt; when PIN request is pending; if no PIN request is pending the command will return an error code and to change the PIN the command <b>+CPWD</b> must be used instead.</p> <p>Parameters:</p> <p>&lt;pin&gt; - string type value</p> <p>&lt;newpin&gt; - string type value.</p> <p>To check the status of the PIN request use the command <b>AT+CPIN?</b></p> <p>Note: If all parameters are omitted then the behaviour of Set command is the same as Read command.</p>	
<b>AT+CPIN?</b>	<p>Read command reports the PIN/PUK/PUK2 request status of the device in the form:</p> <p><b>+CPIN:&lt;code&gt;</b></p> <p>where:</p> <p>&lt;code&gt; - PIN/PUK/PUK2 request status code</p> <p>READY - ME is not pending for any password</p> <p>SIM PIN - ME is waiting SIM PIN to be given</p> <p>SIM PUK - ME is waiting SIM PUK to be given</p> <p>PH-SIM PIN - ME is waiting phone-to-SIM card password to be given</p> <p>PH-FSIM PIN - ME is waiting phone-to-very first SIM card password to be given</p> <p>PH-FSIM PUK - ME is waiting phone-to-very first SIM card unblocking</p>	

+CPIN - Enter PIN	SELINT 0 / 1																																				
	password to be given SIM PIN2 - ME is waiting SIM PIN2 to be given; this <code> is returned only when the last executed command resulted in PIN2 authentication failure (i.e. +CME ERROR: 17) SIM PUK2 - ME is waiting SIM PUK2 to be given; this <code> is returned only when the last executed command resulted in PUK2 authentication failure (i.e. +CME ERROR: 18) PH-NET PIN - ME is waiting network personalization password to be given PH-NET PUK - ME is waiting network personalization unblocking password to be given PH-NETSUB PIN - ME is waiting network subset personalization password to be given PH-NETSUB PUK - ME is waiting network subset personalization unblocking password to be given PH-SP PIN - ME is waiting service provider personalization password to be given PH-SP PUK - ME is waiting service provider personalization unblocking password to be given PH-CORP PIN - ME is waiting corporate personalization password to be given PH-CORP PUK - ME is waiting corporate personalization unblocking password to be given PH-MCL PIN – ME is waiting Multi Country Lock password to be given																																				
	Note: Pin pending status at startup depends on PIN facility setting, to change or query the default power up setting use either the AT+CLK=SC,<mode>, <pin> command or the AT@CLK=SC,<mode>, <pin> command.																																				
AT+CPIN=?	Test command returns <b>OK</b> result code.																																				
Example	<pre>AT+CMEE=1 OK AT+CPIN? +CME ERROR: 10 error: you have to insert the SIM AT+CPIN? +CPIN: READY you inserted the SIM and device is not waiting for PIN to be given OK</pre>

### 3.5.4.4.10. Write Phonebook Entry - +CPBW

+CPBW - Write Phonebook Entry		SELINT 0 / 1
AT+CPBW= [<>index>] [,>number<] [,>type<] [,>text<]]]	Execution command stores at the position <index> a phonebook record defined by <number>, <type> and <text> parameters  Parameters: <index> - record position <number> - string type, phone number in the format <type> <type> - the type of number 129 - national numbering scheme 145 - international numbering scheme (contains the character "+") <text> - the text associated to the number, string type; used character set should be the one selected with command +CSCS.	
AT+CPBW=?	Note: If record number <index> already exists, it will be overwritten.  Note: if only <index> is given, the record number <index> is deleted.  Note: if <index> is omitted or <index>=0, the number <number> is stored in the first free phonebook location. (example at+cpbw=0,2,129,"Testo" and at+cpbw=2,129,"Testo")  Note: omission of all the subparameters causes an <b>ERROR</b> result code.	

<b>+CPBW - Write Phonebook Entry</b>		<b>SELINT 0 / 1</b>
	<p>&lt;nlength&gt; - integer type value indicating the maximum length of field &lt;number&gt;</p> <p>&lt;tlength&gt; - integer type value indicating the maximum length of field &lt;text&gt;</p>	
Reference	3GPP TS 27.007	
Note	Remember to select the PB storage with +CPBS command before issuing PB commands.	

<b>+CPBW - Write Phonebook Entry</b>		<b>SELINT 2</b>
AT+CPBW=	Execution command writes phonebook entry in location number <index> in the current phonebook memory storage selected with +CPBS.	
[<index>] [,<number> [<type> [,<text>]]]	<p>Parameters:</p> <p>&lt;index&gt; - integer type, value in the range of location numbers of the currently selected phonebook memory storage (see +CPBS).</p> <p>&lt;number&gt; - string type, phone number in the format &lt;type&gt;</p> <p>&lt;type&gt; - the type of number</p> <ul style="list-style-type: none"> <li>129 - national numbering scheme</li> <li>145 - international numbering scheme (contains the character "+")</li> </ul> <p>&lt;text&gt; - the text associated to the number, string type; used character set should be the one selected with command +CSCS.</p> <p>Note: If record number &lt;index&gt; already exists, it will be overwritten.</p> <p>Note: if either &lt;number&gt;, &lt;type&gt; and &lt;text&gt; are omitted, the phonebook entry in location &lt;index&gt; is deleted.</p> <p>Note: if &lt;index&gt; is omitted or &lt;index&gt;=0, the number &lt;number&gt; is stored in the first free phonebook location.          (example at+cpbw=0,"+390404192701",129,"Text" and          at+cpbw=,+390404192701",129,"Text")</p> <p>Note: if either "LD", "MC" or "RC" memory storage has been selected (see +CPBS) it is possible just to delete the phonebook entry in location &lt;index&gt;, therefore parameters &lt;number&gt;, &lt;type&gt; and &lt;text&gt; must be omitted.</p>	
AT+CPBW=?	<p>Test command returns location range supported by the current storage as a compound value, the maximum length of &lt;number&gt; field, supported number format of the storage and maximum length of &lt;text&gt; field. The format is:</p> <p><b>+CPBW: (list of supported &lt;index&gt;s),&lt;nlength&gt;, (list of supported &lt;type&gt;s),&lt;tlength&gt;</b></p> <p>where:</p> <p>&lt;nlength&gt; - integer type value indicating the maximum length of field &lt;number&gt;.</p> <p>&lt;tlength&gt; - integer type value indicating the maximum length of field &lt;text&gt;</p>	

+CPBW - Write Phonebook Entry		SELINT 2
Note: the value of <nlength> could vary, depending on whether or not the ENS functionality has been previously enabled (see #ENS), in the following situations:		
<ol style="list-style-type: none"> <li>1. if "SM" memory storage has been selected (see +CPBS) and the <b>SIM</b> supports the <b>Extension1</b> service</li> <li>2. if "FD" memory storage has been selected (see +CPBS) and the <b>SIM</b> supports the <b>Extension2</b> service             <ol style="list-style-type: none"> <li>1. if "MB" memory storage has been selected (see +CPBS) and the <b>SIM</b> supports the <b>Extension6</b> service</li> </ol> </li> </ol>		
Reference	3GPP TS 27.007	
Note	Remember to select the PB storage with +CPBS command before issuing PB commands.	

### 3.5.4.4.11. Clock Management - +CCLK

+CCLK - Clock Management		SELINT 0 / 1
AT+CCLK [=<time>]	<p>Set command sets the real-time clock of the ME.</p> <p>Parameter:</p> <p>&lt;time&gt; - current time as quoted string in the format : "yy/MM/dd,hh:mm:ss±zz"          yy - year (two last digits are mandatory), range is 00..99          MM - month (two last digits are mandatory), range is 01..12          dd - day (two last digits are mandatory);          The range for dd(day) depends either on the month and on the year it refers to.          Available ranges are:          (01..28)          (01..29)          (01..30)          (01..31)</p> <p>Trying to enter an out of range value will raise an error</p> <p>hh - hour (two last digits are mandatory), range is 00..23          mm - minute (two last digits are mandatory), range is 00..59          ss - seconds (two last digits are mandatory), range is 00..59          ±zz - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory), range is -47..+48</p> <p>Note: If the parameter is omitted the behaviour of Set command is the same as Read command.</p>	
AT+CCLK?	Read command returns the current setting of the real-time clock, in the format <time>.	
	Note: the three last characters of <time> are not returned by +CCLK? because the ME doesn't support time zone information.	
AT+CCLK=?	Test command returns the OK result code.	
Example	AT+CCLK="02/09/07,22:30:00+00" OK	

<b>+CCLK - Clock Management</b>		<b>SELINT 0 / 1</b>
	AT+CCLK? +CCLK: 02/09/07,22:30:25  OK	
Reference	3GPP TS 27.007	

<b>+CCLK - Clock Management</b>		<b>SELINT 2</b>
<b>AT+CCLK=&lt;time&gt;</b>	<p>Set command sets the real-time clock of the ME.</p> <p>Parameter:</p> <p>&lt;time&gt; - current time as quoted string in the format: "yy/MM/dd,hh:mm:ss±zz"          yy - year (two last digits are mandatory), range is 00..99          MM - month (two last digits are mandatory), range is 01..12          dd - day (two last digits are mandatory);          The range for dd(day) depends either on the month and on the year it refers to.          Available ranges are:          (01..28)          (01..29)          (01..30)          (01..31)</p> <p>Trying to enter an out of range value will raise an error</p> <p>hh - hour (two last digits are mandatory), range is 00..23          mm - minute (two last digits are mandatory), range is 00..59          ss - seconds (two last digits are mandatory), range is 00..59          ±zz - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory), range is -47..+48</p>	
<b>AT+CCLK?</b>	<p>Read command returns the current setting of the real-time clock, in the format &lt;time&gt;.</p> <p>Note: the three last characters of &lt;time&gt;, i.e. the time zone information, are returned by +CCLK? only if the #NITZ URC 'extended' format has been enabled (see #NITZ).</p>	
<b>AT+CCLK=?</b>	<p>Test command returns the <b>OK</b> result code.</p>	
Example	<pre>AT+CCLK="02/09/07,22:30:00+00" OK AT+CCLK? +CCLK: 02/09/07,22:30:25 OK</pre>	
Reference	3GPP TS 27.007	

### 3.5.4.4.12. Alarm Management - +CALA

+CALA - Alarm Management	SELINT 0 / 1
<b>AT+CALA[= &lt;time&gt;[,&lt;n&gt;[,&lt;type&gt; [,&lt;text&gt;[,&lt;recurr&gt; [,&lt;silent&gt;]]]]]</b>  Set command stores in the internal Real Time Clock an alarm time with respective settings. It is possible to set up a recurrent alarm for one or more days in the week. Currently just one alarm can be set.  When the RTC time reaches the alarm time then the alarm starts, the behaviour of the MODULE depends upon the setting <b>&lt;type&gt;</b> and if the device was already <b>ON</b> at the moment when the alarm time had come.  Parameters: <b>&lt;time&gt;</b> - current alarm time as quoted string “” - (empty string) deletes the current alarm and resets all the +CALA parameters to the “factory default” configuration "hh:mm:ss±zz" - format to be used only when issuing +CALA with parameter <b>&lt;recurr&gt;</b> too. "yy/MM/dd,hh:mm:ss±zz" - generic format: it's the same as defined for +CCLK (see) <b>&lt;n&gt;</b> - index of the alarm 0 - The only value supported is 0. <b>&lt;type&gt;</b> - alarm behaviour type 0 - reserved for other equipment use. 1 - the MODULE simply wakes up fully operative as if the <b>ON/OFF</b> button had been pressed. If the device is already <b>ON</b> at the alarm time, then it does nothing (default). 2 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE issues an unsolicited code every 3s:  <b>+CALA: &lt;text&gt;</b>  where <b>&lt;text&gt;</b> is the +CALA optional parameter previously set.  The device keeps on sending the unsolicited code every 3s until a <b>#WAKE</b> or <b>#SHDN</b> command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the <b>#WAKE</b> command within 90 seconds then it shuts down. 3 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE starts playing the alarm tone on the selected path for the ringer (see <b>#SRP</b> ) The device keeps on playing the alarm tone until a <b>#WAKE</b> or <b>#SHDN</b> command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the <b>#WAKE</b> command within 90s then it shuts down. 4 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE brings the pin <b>GPIO6</b> high, provided its <b>&lt;direction&gt;</b> has been set to alarm output, and keeps	

<b>+CALA - Alarm Management</b>		<b>SELINT 0 / 1</b>
	<p>it in this state until a #WAKE or #SHDN command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the #WAKE command within 90s then it shuts down.</p> <p>5 - the MODULE will make both the actions as for &lt;type&gt;=2 and &lt;type&gt;=3.      6 - the MODULE will make both the actions as for &lt;type&gt;=2 and &lt;type&gt;=4.      7 - the MODULE will make both the actions as for &lt;type&gt;=3 and &lt;type&gt;=4.</p> <p>&lt;text&gt; - unsolicited alarm code text string. It has meaning only if &lt;type&gt; is equal to 2 or 5 or 6.</p> <p>&lt;recurr&gt; - string type value indicating day of week for the alarm in one of the following formats:      “&lt;1..7&gt;[,&lt;1..7&gt;[,...]]” - it sets a recurrent alarm for one or more days in the week; the digits 1 to 7 corresponds to the days in the week (Monday is 1).      “0” - it sets a recurrent alarm for all days in the week.</p> <p>&lt;silent&gt; - integer type indicating if the alarm is silent or not.      0 - the alarm will not be silent;      1 - the alarm will be silent.</p> <p>During the "alarm mode" the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SMS, the only commands that can be issued to the MODULE in this state are the #WAKE and #SHDN, every other command must not be issued during this state.</p> <p>Note: If the parameter is omitted the behavior of Set command is the same as Read command.</p>	
<b>AT+CALA?</b>	<p>Read command returns the list of current active alarm settings in the ME, in the format:</p> <p>[+CALA: &lt;time&gt;,&lt;n&gt;,&lt;type&gt;,[&lt;text&gt;],&lt;recurr&gt;,&lt;silent&gt;]</p> <p>Note: if no alarm is present a &lt;CR&gt;&lt;LF&gt; is issued.</p>	
<b>AT+CALA=?</b>	<p>Test command returns the list of supported index values (currently just 0), alarm types and maximum length of the text to be displayed, in the format:</p> <p>+CALA: (list of supported &lt;n&gt;s),(list of supported &lt;type&gt;s),&lt;tlength&gt;</p> <p>where:      &lt;n&gt; and &lt;type&gt; as before      &lt;tlength&gt; - maximum &lt;text&gt; field length, integer type</p> <p>Note: an enhanced version of Test command has been defined, <b>AT+CALA=??</b>, providing the range of available values for &lt;rlength&gt; and &lt;silent&gt; too.</p>	
<b>AT+CALA=??</b>	<p>Test command returns the list of supported index values (currently just 0), alarm types, maximum length of the text to be displayed, maximum length of &lt;recurr&gt; and supported &lt;silent&gt;s, in the format:</p> <p>+CALA: (list of supported &lt;n&gt;s),(list of supported &lt;type&gt;s),&lt;tlength&gt;,</p>	

+CALA - Alarm Management		SELINT 0 / 1
<rlength>,(list of supported <silent>s)		
where: <n>, <type>, <tlength> and <silent> as before <rlength> - maximum <recurr> field length, integer type		
Example	AT+CALA="02/09/07,23:30:00+00" OK	
Reference	ETSI 07.07, ETSI 27.007	

+CALA - Alarm Management		SELINT 2
AT+CALA=	Set command stores in the internal Real Time Clock an alarm time with respective settings. It is possible to set up a recurrent alarm for one or more days in the week. Currently just one alarm can be set.	
<time>[,<n>[,<type> ,<text>[,<recurr> ,<silent>]]]]]	<p>When the RTC time reaches the alarm time then the alarm starts, the behaviour of the MODULE depends upon the setting &lt;type&gt; and if the device was already ON at the moment when the alarm time had come.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;time&gt; - current alarm time as quoted string</li> <li>“” - (empty string) deletes the current alarm and resets all the +CALA parameters to the “factory default” configuration</li> <li>"hh:mm:ss±zz" - format to be used only when issuing +CALA with parameter &lt;recurr&gt; too.</li> <li>"yy/MM/dd,hh:mm:ss±zz" - generic format: it's the same as defined for +CCLK (see)</li> <li>&lt;n&gt; - index of the alarm</li> <li>0 - The only value supported is 0.</li> <li>&lt;type&gt; - alarm behaviour type             <ul style="list-style-type: none"> <li>0 - reserved for other equipment use.</li> <li>1 - the MODULE simply wakes up fully operative as if the ON/OFF button had been pressed. If the device is already ON at the alarm time, then it does nothing (default).</li> <li>2 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE issues an unsolicited code every 3s:</li> </ul> <p>+CALA: &lt;text&gt;</p> <p>where &lt;text&gt; is the +CALA optional parameter previously set.</p> <p>The device keeps on sending the unsolicited code every 3s until a #WAKE or #SHDN command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the #WAKE command within 90s then it shuts down.</p> <p>3 - the MODULE wakes up in "alarm mode" if at the alarm time it was off,</p> </li> </ul>	

+CALA - Alarm Management	SELINT 2
	<p>otherwise it remains fully operative. In both cases the MODULE starts playing the alarm tone on the selected path for the ringer (see command <b>#SRP</b>)</p> <p>The device keeps on playing the alarm tone until a <b>#WAKE</b> or <b>#SHDN</b> command is received or a 90 s time-out occurs. If the device is in "alarm mode" and it does not receive the <b>#WAKE</b> command within 90s then it shuts down.</p> <p>4 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE brings the pin GPIO6 high, provided its <b>&lt;direction&gt;</b> has been set to alarm output, and keeps it in this state until a <b>#WAKE</b> or <b>#SHDN</b> command is received or a 90 seconds timer expires. If the device is in "alarm mode" and it does not receive the <b>#WAKE</b> command within 90s then it shuts down.</p> <p>5 - the MODULE will make both the actions as for type=2 and <b>&lt;type&gt;=3</b>.</p> <p>6 - the MODULE will make both the actions as for type=2 and <b>&lt;type&gt;=4</b>.</p> <p>7 - the MODULE will make both the actions as for type=3 and <b>&lt;type&gt;=4</b>.</p> <p>8 - the MODULE wakes up in "alarm mode" if at the alarm time it was off, otherwise it remains fully operative. In both cases the MODULE sets <b>High</b> the <b>RI</b> output pin. The <b>RI</b> output pin remains <b>High</b> until next <b>#WAKE</b> issue or until a 90s timer expires. If the device is in "alarm mode" and it does not receive the <b>#WAKE</b> command within 90s. After that it shuts down.</p> <p><b>&lt;text&gt;</b> - unsolicited alarm code text string. It has meaning only if <b>&lt;type&gt;</b> is equal to 2 or 5 or 6.</p> <p><b>&lt;recurr&gt;</b> - string type value indicating day of week for the alarm in one of the following formats:</p> <ul style="list-style-type: none"> <li>“&lt;1..7&gt;[,&lt;1..7&gt;[,...]]” - it sets a recurrent alarm for one or more days in the week; the digits 1 to 7 corresponds to the days in the week (Monday is 1).</li> <li>“0” - it sets a recurrent alarm for all days in the week.</li> </ul> <p><b>&lt;silent&gt;</b> - integer type indicating if the alarm is silent or not.</p> <p>0 - the alarm will not be silent;</p> <p>1 - the alarm will be silent.</p> <p>During the "alarm mode" the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SMS, the only commands that can be issued to the MODULE in this state are the <b>#WAKE</b> and <b>#SHDN</b>, every other command must not be issued during this state.</p> <p>Note: it is mandatory to set at least once the RTC (issuing +CCLK) before it is possible to issue +CALA with <b>&lt;type&gt;=8</b></p>
<b>AT+CALA?</b>	Read command returns the list of current active alarm settings in the ME, in the format:  <b>[+CALA: &lt;time&gt;,&lt;n&gt;,&lt;type&gt;,[&lt;text&gt;],&lt;recurr&gt;,&lt;silent&gt;]</b>
<b>AT+CALA=?</b>	Test command returns the list of supported index values (currently just 0), alarm types, maximum length of the text to be displayed, maximum length of <b>&lt;recurr&gt;</b> and supported <b>&lt;silent&gt;</b> s, in the format:  <b>+CALA: (list of supported &lt;n&gt;s),(list of supported &lt;type&gt;s),&lt;tlength&gt;,</b>

<b>+CALA - Alarm Management</b>		<b>SELINT 2</b>
	<rlength>,(list of supported <silent>s)	
Example	AT+CALA="02/09/07,23:30:00+00" OK	
Reference	ETSI 07.07, ETSI 27.007	

#### 3.5.4.4.13. Postpone alarm - +CAPD

<b>+CAPD – postpone or dismiss an alarm</b>		<b>SELINT 2</b>
AT+CAPD=[<sec>]	Set command postpones or dismisses a currently active alarm.  Parameters: <sec>: integer type value indicating the number of seconds to postpone the alarm (maximum 60 seconds). If <sec> is set to 0 (default), the alarm is dismissed.	
AT+CAPD=?	Test command reports the supported range of values for parameter <sec>	

#### 3.5.4.4.14. Setting date format - +CSDF

<b>+CSDF – setting date format</b>		<b>SELINT 2</b>
AT+CSDF=[<mode> [,<auxmode>]]	This command sets the date format of the date information presented to the user, which is specified by use of the <mode> parameter. The <mode> affects the date format on the phone display and doesn't affect the date format of the AT command serial interface, so it not used. The command also sets the date format of the TE-TA interface, which is specified by use of the <auxmode> parameter (i.e., the <auxmode> affects the <time> of AT+CCLK and AT+CALA). If the parameters are omitted then this sets the default value of <mode>.  Parameters: <b>&lt;mode&gt;:</b> 1 DD-MMM-YYYY (default) 2 DD-MM-YY 3 MM/DD/YY 4 DD/MM/YY 5 DD.MM.YY	

	<p>6 YYMMDD 7 YY-MM-DD</p> <p><b>&lt;auxmode&gt;:</b> 1 yy/MM/dd (default) 2 yyyy/MM/dd</p> <p>Note: The &lt;time&gt; format of +CCLK and +CALA is "yy/MM/dd,hh:mm:ss+zz" when &lt;auxmode&gt;=1 and it is "yyyy/MM/dd,hh:mm:ss+zz" when &lt;auxmode&gt;=2.</p>
<b>AT+CSDF?</b>	Read command reports the currently selected <mode> and <auxmode> in the format: <b>+CSDF: &lt;mode&gt;,&lt;auxmode&gt;</b>
<b>AT+CSDF=?</b>	Test command reports the supported range of values for parameters <mode> and <auxmode>

### 3.5.4.4.15. Setting time format - +CSTF

<b>+CSTF – setting time format</b>		<b>SELINT 2</b>
<b>AT+CSTF=[&lt;mode&gt;]</b>	This command sets the time format of the time information presented to the user, which is specified by use of the <mode> parameter. The <mode> affects the time format on the phone display and doesn't affect the time format of the AT command serial interface, so it not actually not used.  Parameters: <b>&lt;mode&gt;:</b> 1 HH:MM (24 hour clock; default) 2 HH:MM a.m./p.m.	
<b>AT+CSTF?</b>	Read command reports the currently selected <mode> in the format: <b>+CSTF: &lt;mode&gt;</b>	
<b>AT+CSTF=?</b>	Test command reports the supported range of values for parameter <mode>	

### 3.5.4.4.16. Time Zone reporting - +CTZR

+CTZR – Time Zone reporting		SELINT 2
<b>AT+CTZR=&lt;onoff&gt;</b>	<p>This command enables and disables the time zone change event reporting. If the reporting is enabled the MT returns the unsolicited result code +CTZV: &lt;tz&gt; whenever the time zone is changed.</p> <p>Parameters:</p> <p>&lt;onoff&gt;:</p> <ul style="list-style-type: none"> <li>0 Disable time zone change event reporting (default)</li> <li>1 Enable time zone change event reporting</li> </ul>	
<b>AT+CTZR?</b>	Read command reports the currently selected <onoff> in the format: <b>+CTZR: &lt;onoff&gt;</b>	
<b>AT+CTZR=?</b>	Test command reports the supported range of values for parameter <onoff>	

### 3.5.4.4.17. Automatic Time Zone update - +CTZU

+CTZU – automatic Time Zone update		SELINT 2
<b>AT+CTZU=&lt;onoff&gt;</b>	<p>This command enables and disables automatic time zone update via NITZ.</p> <p>Parameters:</p> <p>&lt;onoff&gt;:</p> <ul style="list-style-type: none"> <li>0 Disable automatic time zone update via NITZ (default)</li> <li>1 Enable automatic time zone update via NITZ</li> </ul> <p>Note: despite of the name, the command AT+CTZU=1 enables automatic update of the date and time set by AT+CCLK command (not only time zone). This happens when a Network Identity and Time Zone (NITZ) message is sent by the network. This command is the ETSI standard equivalent of Telit custom command AT#NITZ=1. If command AT+CTZU=1, or AT#NITZ=1 (or both) has been issued, NITZ message will cause a date and time update.</p>	
<b>AT+CTZU?</b>	Read command reports the currently selected <onoff> in the format: <b>+CTZU: &lt;onoff&gt;</b>	
<b>AT+CTZU=?</b>	Test command reports the supported range of values for parameter <onoff>	

### 3.5.4.4.18. Restricted SIM Access - +CRSM

<b>+CRSM - Restricted SIM Access</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+CRSM=</b> <b>&lt;command&gt;</b> [,<fileid> [,<P1>,<P2>,<P3> [,<data>]]]	Execution command transmits to the ME the SIM <command> and its required parameters. ME handles internally all SIM-ME interface locking and file selection routines. As response to the command, ME sends the actual SIM information parameters and response data.	
<p>Parameters:</p> <p>&lt;command&gt; - command passed on by the ME to the SIM          176 - READ BINARY          178 - READ RECORD          192 - GET RESPONSE          214 - UPDATE BINARY          220 - UPDATE RECORD          242 - STATUS</p> <p>&lt;fileid&gt; - identifier of an elementary data file on SIM. Mandatory for every command except STATUS.</p> <p>&lt;P1&gt;,&lt;P2&gt;,&lt;P3&gt; - parameter passed on by the ME to the SIM; they are mandatory for every command except GET RESPONSE and STATUS          0..255</p> <p>&lt;data&gt; - information to be read/written to the SIM (hexadecimal character format).</p> <p>The response of the command is in the format:</p> <p><b>+CRSM: &lt;sw1&gt;,&lt;sw2&gt;[,&lt;response&gt;]</b></p> <p>where:</p> <p>&lt;sw1&gt;,&lt;sw2&gt; - information from the SIM about the execution of the actual command either on successful or on failed execution.</p> <p>&lt;response&gt; - on a successful completion of the command previously issued it gives the requested data (hexadecimal character format). It's not returned after a successful UPDATE BINARY or UPDATE RECORD command.</p> <p>Note: this command requires PIN authentication. However commands READ BINARY and READ RECORD can be issued before PIN authentication and if the SIM is blocked (after three failed PIN authentication attempts) to access the contents of the Elementary Files.</p> <p>Note: use only decimal numbers for parameters &lt;command&gt;, &lt;fileid&gt;, &lt;P1&gt;, &lt;P2&gt; and &lt;P3&gt;.</p>		
<b>AT+CRSM=?</b>	Test command returns the <b>OK</b> result code	
Reference	3GPP TS 27.007, GSM 11.11	

### 3.5.4.4.19. Alert Sound Mode - +CALM

<b>+CALM - Alert Sound Mode</b>		<b>SELINT 0 / 1</b>
<b>AT+CALM[= &lt;mode&gt;]</b>	Set command is used to select the general alert sound mode of the device.  Parameter: <b>&lt;mode&gt;</b> 0 - normal mode 1 - silent mode; no sound will be generated by the device, except for alarm sound 2 - stealth mode; no sound will be generated by the device  Note: if silent mode is selected then incoming calls will not produce alerting sounds but only the unsolicited messages <b>RING</b> or <b>+CRING</b> .  Note: If parameter is omitted then the behaviour of Set command is the same as Read command.	
<b>AT+CALM?</b>	Read command returns the current value of parameter <b>&lt;mode&gt;</b> .	
<b>AT+CALM=?</b>	Test command returns the supported values for the parameter <b>&lt;mode&gt;</b> as compound value.  For compatibility with previous versions, Test command returns <b>+CALM: (0,1)</b>  An enhanced version of Test command has been defined: <b>AT+CALM=??</b> , that provides the complete range of values for <b>&lt;mode&gt;</b> .	
<b>AT+CALM=??</b>	Enhanced test command returns the complete range of values for the parameter <b>&lt;mode&gt;</b> as compound value:  <b>+CALM: (0-2)</b>	
Reference	3GPP TS 27.007	

<b>+CALM - Alert Sound Mode</b>		<b>SELINT 2</b>
<b>AT+CALM= &lt;mode&gt;</b>	Set command is used to select the general alert sound mode of the device.  Parameter: <b>&lt;mode&gt;</b> 0 - normal mode 1 - silent mode; no sound will be generated by the device, except for alarm sound 2 - stealth mode; no sound will be generated by the device  Note: if silent mode is selected then incoming calls will not produce alerting sounds but only the unsolicited messages <b>RING</b> or <b>+CRING</b> .	
<b>AT+CALM?</b>	Read command returns the current value of parameter <b>&lt;mode&gt;</b> .	
<b>AT+CALM=?</b>	Test command returns the supported values for the parameter <b>&lt;mode&gt;</b> as compound value.  <b>+CALM: (0-2)</b>	
Reference	3GPP TS 27.007	

### 3.5.4.4.20. Ringer Sound Level - +CRSL

<b>+CRSL - Ringer Sound Level</b>		<b>SELINT 0</b>
<b>AT+CRSL[=&lt;level&gt;]</b>	<p>Set command is used to select the incoming call ringer sound level of the device.</p> <p>Parameter:  <b>&lt;level&gt;</b> - ringer sound level            0 - Off            1 - low            2 - middle            3 - high            4 - progressive</p> <p>Note: if parameter is omitted then the behaviour of Set command is the same as Read command</p>	
<b>AT+CRSL?</b>	<p>Read command reports the current <b>&lt;level&gt;</b> setting of the call ringer in the format:</p> <p><b>+CRSL: &lt;level&gt;</b></p>	
<b>AT+CRSL=?</b>	<p>Test command reports <b>&lt;level&gt;</b> supported values as compound value.</p> <p>For compatibility with previous versions, Test command returns  <b>+CRSL: (0-3)</b></p> <p>An enhanced version of Test command has been defined: <b>AT+CRSL=??</b>, that provides the complete range of values for <b>&lt;level&gt;</b>.</p>	
<b>AT+CRSL=??</b>	<p>Enhanced Test command returns the complete range of supported values for the parameter <b>&lt;mode&gt;</b>:</p> <p><b>+CRSL: (0-4)</b></p>	
Reference	3GPP TS 27.007	

<b>+CRSL - Ringer Sound Level</b>		<b>SELINT 1</b>
<b>AT+CRSL[=&lt;level&gt;]</b>	<p>Set command is used to select the incoming call ringer sound level of the device.</p> <p>Parameter:  <b>&lt;level&gt;</b> - ringer sound level            0 - Off            1 - low            2 - middle            3 - high            4 - progressive</p> <p>Note: if parameter is omitted then the behaviour of Set command is the same as Read command</p>	
<b>AT+CRSL?</b>	<p>Read command reports the current <b>&lt;level&gt;</b> setting of the call ringer in the format:</p> <p><b>+CRSL: &lt;level&gt;</b></p>	
<b>AT+CRSL=?</b>	<p>Test command reports <b>&lt;level&gt;</b> supported values as compound value, in the format:</p>	

<b>+CRSL - Ringer Sound Level</b>		<b>SELINT 1</b>
	<b>+CRSL: (0-4)</b>  Note: an enhanced version of Test command has been defined: <b>AT+CRSL=??</b> .	
<b>AT+CRSL=??</b>	Enhanced Test command returns the complete range of supported values for the parameter <mode>:  <b>+CRSL: (0-4)</b>	
Reference	3GPP TS 27.007	

<b>+CRSL - Ringer Sound Level</b>		<b>SELINT 2</b>
<b>AT+CRSL=&lt;level&gt;</b>	Set command is used to select the incoming call ringer sound level of the device.  Parameter: <b>&lt;level&gt;</b> - ringer sound level 0 - Off 1 - low 2 - middle 3 - high 4 - progressive	
<b>AT+CRSL?</b>	Read command reports the current <level> setting of the call ringer in the format: <b>+CRSL: &lt;level&gt;</b>	
<b>AT+CRSL=?</b>	Test command reports <level> supported values as compound value.  <b>+CRSL: (0-4)</b>

#### 3.5.4.4.23. Silence command - +CSIL

<b>+CSIL – silence command</b>		<b>SELINT 2</b>
<b>AT+CSIL=[&lt;mode&gt;]</b>	<p>This command enables/disables the silent mode. When the phone is in silent mode, all signalling tones from MT are suppressed.</p> <p>Parameters:  <b>&lt;mode&gt;:</b>            0 Silent mode off (default)            1 Silent mode on</p>	
<b>AT+CSIL?</b>	Read command reports the currently selected <b>&lt;mode&gt;</b> in the format: <b>+CSIL: &lt;mode&gt;</b>	
<b>AT+CSIL=?</b>	Test command reports the supported range of values for parameter <b>&lt;mode&gt;</b>	

#### 3.5.4.4.24. Accumulated Call Meter - +CACM

<b>+CACM - Accumulated Call Meter</b>		<b>SELINT 0 / 1</b>
<b>AT+CACM[=&lt;pwd&gt;]</b>	<p>Set command resets the Advice of Charge related Accumulated Call Meter stored in SIM (ACM): it contains the total number of home units for both the current and preceding calls.</p> <p>Parameter:  <b>&lt;pwd&gt;</b> - to access this command PIN2 is required; if PIN2 has been already input once after startup, it is required no more</p> <p>Note: If the parameter is omitted the behavior of Set command is the same as Read command.</p>	

<b>+CACM - Accumulated Call Meter</b>		<b>SELINT 0 / 1</b>
<b>AT+CACM?</b>	Read command reports the current value of the SIM ACM in the format:  <b>+CACM: &lt;acm&gt;</b>  where: <b>&lt;acm&gt;</b> - accumulated call meter in home units, string type: three bytes of the ACM value in hexadecimal format (e.g. “00001E” indicates decimal value 30)  Note: the value <b>&lt;acm&gt;</b> is in units whose price and currency are defined with command <b>+CPUC</b>	
<b>AT+CACM=?</b>	Test command returns the <b>OK</b> result code	
Reference	3GPP TS 27.007	

<b>+CACM - Accumulated Call Meter</b>		<b>SELINT 2</b>
<b>AT+CACM= [&lt;pwd&gt;]</b>	Set command resets the Advice of Charge related Accumulated Call Meter stored in SIM (ACM): it contains the total number of home units for both the current and preceding calls.  Parameter: <b>&lt;pwd&gt;</b> - to access this command PIN2; if PIN2 has been already input once after startup, it is required no more	
<b>AT+CACM?</b>	Read command reports the current value of the SIM ACM in the format:  <b>+CACM: &lt;acm&gt;</b>  where: <b>&lt;acm&gt;</b> - accumulated call meter in home units, string type: three bytes of the ACM value in hexadecimal format (e.g. “00001E” indicates decimal value 30)  Note: the value <b>&lt;acm&gt;</b> is in home units; price per unit and currency are defined with command <b>+CPUC</b>	
<b>AT+CACM=?</b>	Test command returns the <b>OK</b> result code	
Reference	3GPP TS 27.007	

### 3.5.4.4.25. Accumulated Call Meter Maximum - +CMM

<b>+CMM - Accumulated Call Meter Maximum</b>		<b>SELINT 0 / 1</b>
<b>AT+CMM[=&lt;acmm&gt;[,&lt;pwd&gt;]]</b>	Set command sets the Advice of Charge related Accumulated Call Meter Maximum Value stored in SIM (ACMmax). This value represents the maximum number of home units allowed to be consumed by the subscriber. When ACM reaches <b>&lt;acmm&gt;</b> value further calls are prohibited.  Parameter: <b>&lt;acmm&gt;</b> - ACMmax value, integer type: it is the maximum number of home	

<b>+CAMM - Accumulated Call Meter Maximum</b>		<b>SELINT 0 / 1</b>
	<p>units allowed to be consumed by the subscriber.</p> <p>&lt;pwd&gt; - PIN2; if PIN2 has been already input once after startup, it is required no more</p> <p>Note: &lt;acmmmax&gt;=0 value disables the feature.</p> <p>Note: if the parameters are omitted the behavior of Set command is the same as Read command.</p>	
<b>AT+CAMM?</b>		Read command reports the ACMmax value stored in SIM in the format:
+CAMM : <acmm>		
where:		
<acmm> - ACMmax value in home units, string type: ACMmax value in decimal format.		
Reference	3GPP TS 27.007	

<b>+CAMM - Accumulated Call Meter Maximum</b>		<b>SELINT 2</b>
<b>AT+CAMM=</b> [<acmmmax> [,<pwd>]]	Set command sets the Advice of Charge related Accumulated Call Meter Maximum Value stored in SIM (ACMmax). This value represents the maximum number of home units allowed to be consumed by the subscriber. When ACM reaches <acmmmax> value further calls are prohibited.	
Parameter:		
<acmmmax> - ACMmax value, integer type: it is the maximum number of home units allowed to be consumed by the subscriber.		
<pwd> - PIN2; if PIN2 has been already input once after startup, it is required no more		
Note: <acmmmax> = 0 value disables the feature.		
<b>AT+CAMM?</b>		Read command reports the ACMmax value stored in SIM in the format:
+CAMM : <acmm>		
where:		
<acmm> - ACMmax value in home units, string type: three bytes of the ACMmax value in hexadecimal format (e.g. “00001E” indicates decimal value 30)		
<b>AT+CAMM=?</b>	Test command returns the <b>OK</b> result code	
Reference	3GPP TS 27.007	

### 3.5.4.26. Price per Unit and Currency Table - +CPUC

<b>+CPUC - Price Per Unit And Currency Table</b>		<b>SELINT 0 / 1</b>
<b>AT+CPUC=[</b> <currency>, <ppu>[,<pwd>]]	Set command sets the values of Advice of Charge related Price per Unit and Currency Table stored in SIM (PUCT). The PUCT information can be used to convert the home units (as used in commands +CAOC, +CACM and +CAMM)	

<b>+CPUC - Price Per Unit And Currency Table</b>		<b>SELINT 0 / 1</b>
	into currency units.  Parameters: <b>&lt;currency&gt;</b> - string type; three-character currency code (e.g. LIT, USD, DEM etc..); used character set should be the one selected with command +CSCS. <b>&lt;ppu&gt;</b> - price per unit, string type (dot is used as decimal separator) e.g. "1989.27" <b>&lt;pwd&gt;</b> - SIM PIN2; if PIN2 has been already input once after startup, it is required no more  Note: if the parameters are omitted the behavior of Set command is the same as Read command.	
<b>AT+CPUC?</b>		Read command reports the current values of <b>&lt;currency&gt;</b> and <b>&lt;ppu&gt;</b> parameters in the format:  <b>+CPUC : &lt;currency&gt;,&lt;ppu&gt;</b>
Reference		3GPP TS 27.007

<b>+CPUC - Price Per Unit And Currency Table</b>		<b>SELINT 2</b>
<b>AT+CPUC=</b> <b>&lt;currency&gt;,</b> <b>&lt;ppu&gt;[,&lt;pwd&gt;]</b>	Set command sets the values of Advice of Charge related Price per Unit and Currency Table stored in SIM (PUCT). The PUCT information can be used to convert the home units (as used in commands +CAOC, +CACM and +CAMM) into currency units.  Parameters: <b>&lt;currency&gt;</b> - string type; three-character currency code (e.g. "LIT", "L.", "USD", "DEM" etc..); used character set should be the one selected with command +CSCS. <b>&lt;ppu&gt;</b> - price per unit, string type (dot is used as decimal separator) e.g. "1989.27" <b>&lt;pwd&gt;</b> - SIM PIN2; if PIN2 has been already input once after startup, it is required no more	
<b>AT+CPUC?</b>		Read command reports the current values of <b>&lt;currency&gt;</b> and <b>&lt;ppu&gt;</b> parameters in the format:  <b>+CPUC : &lt;currency&gt;,&lt;ppu&gt;</b>
<b>AT+CPUC=?</b>		Test command returns the <b>OK</b> result code
Reference		3GPP TS 27.007

### 3.5.4.4.27. Call meter maximum event - +CCWE

<b>+CCWE – Call Meter maximum event</b>		<b>SELINT 2</b>
<b>AT+CCWE=&lt;mode&gt;</b>	<p>Set command is used to enable/disable sending of an unsolicited result code +CCWV shortly before the ACM (Accumulated Call Meter) maximum value is reached. The warning is issued approximately when 30 seconds call time remains. It is also issued when starting a call if less than 30 seconds call time remains.</p> <p>Parameters:</p> <p><b>&lt;mode&gt;:</b></p> <ul style="list-style-type: none"> <li>0 Disable the call meter warning event (default)</li> <li>1 Enable the call meter warning event</li> </ul> <p>Note: the set command will respond with an error if the Accumulated Call Meter service is not active in SIM</p>	
<b>AT+CCWE?</b>	Read command reports the currently selected <mode> in the format:  <b>+CCWE: &lt;mode&gt;</b>	
<b>AT+CCWE=?</b>	Test command reports the supported range of values for parameter <b>&lt;mode&gt;</b>	

### 3.5.4.4.28. Available AT Commands - +CLAC

<b>+CLAC - Available AT Commands</b>		<b>SELINT 2</b>
<b>AT+CLAC</b>	Execution command causes the ME to return the AT commands that are available for the user, in the following format:  <b>&lt;AT cmd1&gt;[&lt;CR&gt;&lt;LF&gt;&lt;AT cmd2&gt;[...]]</b>	
	where: <b>&lt;AT cmdn&gt;</b> - defines the AT command including the prefix AT	
<b>AT+CLAC=?</b>	Test command returns the <b>OK</b> result code	
Reference	3GPP TS 27.007	

### 3.5.4.4.29. Delete Alarm - +CALD

<b>+CALD - Delete Alarm</b>		<b>SELINT 2</b>
<b>AT+CALD=&lt;n&gt;</b>	Execution command deletes an alarm in the ME  Parameter: <b>&lt;n&gt;</b> - alarm index 0	

<b>+CALD - Delete Alarm</b>	<b>SELINT 2</b>
<b>AT+CALD=?</b>	Test command reports the range of supported values for <n> parameter.
Reference	3G TS 27.007

#### 3.5.4.4.30. Read ICCID - +CCID

<b>+CCID - Read ICCID (Integrated Circuit Card Identification)</b>	<b>SELINT 0 / 1</b>
<b>AT+CCID</b>	Execution command reads on SIM the ICCID (card identification number that provides a unique identification number for the SIM)
<b>AT+ CCID?</b>	Read command has the same effect as Execution command.
<b>AT+CCID=?</b>	Test command reports <b>OK</b> .

#### 3.5.4.4.31. Generic SIM access - +CSIM

<b>+CSIM – Generic SIM access</b>	<b>SELINT 0 / 1 / 2</b>
<b>AT+CSIM=&lt;lock&gt;</b>	<p>Between two successive +CSIM command the SIM-ME interface must be locked to avoid commands can modify wrong SIM file. The locking and unlocking of the SIM-ME interface must be done explicitly respectively at the beginning and at the end of the +CSIM commands sequence.</p> <p>Parameters:</p> <p>&lt;lock&gt;=1 locking of the interface      &lt;lock&gt;=0 unlocking of the interface</p> <p>In case that TE application does not use the unlock command in a certain timeout value, ME releases the locking.</p>
<b>AT+CSIM=&lt;length&gt;, &lt;command&gt;</b>	<p>The ME shall send the &lt;command&gt; as it is to the SIM. As response to the command, ME sends back the actual SIM &lt;response&gt; to the TA as it is.</p> <p>Parameters:</p> <p>&lt;length&gt;: number of the characters that are sent to TE in &lt;command&gt; or &lt;response&gt; (two times the actual length of the command or response)</p> <p>&lt;command&gt;: command passed on by the ME to the SIM in the format as described in GSM 11.11 (hexadecimal character format)</p> <p>The response of the command is in the format:</p>

+CSIM – Generic SIM access	SELINT 0 / 1 / 2
	<p><b>+CSIM: &lt;length&gt;,&lt;response&gt;</b></p> <p>where:</p> <p>&lt;<b>response</b>&gt; : response to the command passed on by the SIM to the ME in the format as described in GSM 11.11 (hexadecimal character format).</p> <p>Error case:</p> <p><b>+CME ERROR: &lt;err&gt;</b></p> <p>possible &lt;<b>err</b>&gt; values (numeric format followed by verbose format):</p> <ul style="list-style-type: none"> <li>3 operation not allowed (<i>operation mode is not allowed by the ME, wrong interface lock/unlock status</i>)</li> <li>4 operation not supported (<i>wrong format or parameters of the command</i>)</li> <li>13 SIM failure (<i>SIM no response</i>)</li> </ul>
<b>AT+CSIM=?</b>	Test command returns the <b>OK</b> result code.
Example	<p><b>Lock SIM interface</b></p> <p><b>AT+CSIM=1</b></p> <p><b>OK</b></p> <p><b>STATUS</b></p> <p>AT+CSIM=10,"A0F2000002"</p> <p>+CSIM: 8,"00009000"</p> <p><b>OK</b></p> <p><b>STATUS</b></p> <p>AT+CSIM=10,A0F2000016</p> <p>+CSIM:48,"000002A87F20020000000000099300220800838A838A9000"</p> <p><b>OK</b></p> <p><b>SELECT EF 6F07</b></p> <p>AT+CSIM=14,A0A40000026F07</p> <p>+CSIM: 4,"9F0F"</p> <p><b>OK</b></p> <p><b>GET RESPONSE</b></p> <p>AT+CSIM=10,A0C000000F</p> <p>+CSIM: 34,"000000096F0704001A001A010200009000"</p> <p><b>OK</b></p> <p><b>SELECT EF 6F30</b></p>

+CSIM – Generic SIM access	SELINT 0 / 1 / 2
	<p>AT+CSIM=14,A0A40000026F30 +CSIM: 4,"9F0F"</p> <p>OK</p> <p><i>READ BINARY</i></p> <p>AT+CSIM=10,A0B00000FC +CSIM:508,"FFFFFFFFFF1300831300901300541300301300651300381300801301801 3000113110913013009813007713005913004313008113009513014013002313 0016330420130041FFFFFFFFFFFF21436542F41922F28822F201FFFFFFFFFFFF FF FF FF FF FF FFFFFFFFFFFF9000"</p> <p>OK</p> <p><i>Unlock SIM interface</i></p> <p>AT+CSIM=0</p> <p>OK</p>
Note	<p>For the following instructions ( value of the second byte):</p> <p>A4 : SELECT 10 : TERMINAL PROFILE C2 : ENVELOPE 14 : TERMINAL RESPONSE A2 : SEEK</p> <p>the value of the fifth byte of &lt;command&gt; must be equal to the number of bytes which follow (data starting from 6<sup>th</sup> byte) and this must be equal to &lt;length&gt;/2 – 5 otherwise the command is not send to the SIM and CME_ERROR=4 is returned.</p>
Note	<p>After the locking of the SIM-ME interface (AT+CSIM=1) the SIM will be accessible only by AT+CSIM commands (#QSS: 0). The GSM and GPRS services will be automatically deregistered to avoid the TE commands alter the GSM application. They will be automatically reconditioned after the unlocking of the SIM-ME interface. After the unlocking of the SIM-ME interface if PIN is required it will be necessary to enter it another time.</p>

### 3.5.4.4.32. Set Voice Mail Number - +CSVM

<b>+CSVM – Set Voice Mail Number</b>		<b>SELINT 2</b>
AT+CSVM=<mode>[,<number>[,<type>]]	<p>The number to the voice mail server is set with this command. The parameters &lt;number&gt; and &lt;type&gt; can be left out if the parameter &lt;mode&gt; is set to 0.</p> <p>Parameters:</p> <p>&lt;mode&gt;</p> <ul style="list-style-type: none"> <li>0 – disable the voice mail number</li> <li>1 – enable the voice mail number (factory default)</li> </ul> <p>&lt;number&gt; - string type phone number of format specified by &lt;type&gt;</p> <p>&lt;type&gt; - type of address octet in integer format</p> <ul style="list-style-type: none"> <li>129 - unknown type of number and ISDN/Telephony numbering plan</li> <li>145 - international type of number and ISDN/Telephony numbering plan (contains the character "+")</li> </ul> <p>Note: Set command only checks for parameters values validity; it does not any actual write to SIM to update voice mail number.</p>	
AT+CSVM?	Read command returns the currently selected voice mail number and the status (i.e. enabled/disabled) in the format  +CSVM:<mode>,<number>,<type>	
AT+CSVM=?	Test command reports the range for the parameters <mode> and <type>.	

### 3.5.4.5. Mobile Equipment Errors

#### 3.5.4.5.1. Report Mobile Equipment Error - +CMEE

<b>+CMEE - Report Mobile Equipment Error</b>		<b>SELINT 0 / 1</b>
AT+CMEE[=<n>]	<p>Set command enables/disables the report of result code:  +CME ERROR: &lt;err&gt;  as an indication of an error relating to the +Cxxx commands issued. When enabled, device related errors cause the +CME ERROR: &lt;err&gt; final result code instead of the default <b>ERROR</b> final result code. <b>ERROR</b> is anyway returned normally when the error message is related to syntax, invalid parameters, or <b>DTE</b> functionality.</p> <p>Parameter:</p>	

<b>+CMEE - Report Mobile Equipment Error</b>		<b>SELINT 0 / 1</b>
	<p>&lt;n&gt; - enable flag</p> <p>0 - disable +CME ERROR:&lt;err&gt; reports, use only <b>ERROR</b> report.</p> <p>1 - enable +CME ERROR:&lt;err&gt; reports, with &lt;err&gt; in numeric format</p> <p>2 - enable +CME ERROR:&lt;err&gt; reports, with &lt;err&gt; in verbose format</p> <p>Note: issuing <b>AT+CMEE&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+CMEE=&lt;CR&gt;</b> is the same as issuing the command <b>AT+CMEE=0&lt;CR&gt;</b>.</p>	
<b>AT+CMEE?</b>	Read command returns the current value of subparameter <n>	<b>+CMEE: &lt;n&gt;</b>
<b>AT+CMEE=?</b>	Test command returns the range of values for subparameter <n> in the format:	<b>+CMEE: 0, 1, 2</b>
Note	<b>+CMEE</b> has no effect on the final result code <b>+CMS</b>	
Reference	3GPP TS 27.007	

<b>+CMEE - Report Mobile Equipment Error</b>		<b>SELINT 2</b>
<b>AT+CMEE=[&lt;n&gt;]</b>	Set command enables/disables the report of result code:  <b>+CME ERROR: &lt;err&gt;</b>  as an indication of an error relating to the +Cxxx commands issued.  When enabled, device related errors cause the +CME ERROR: <err> final result code instead of the default <b>ERROR</b> final result code. <b>ERROR</b> is anyway returned normally when the error message is related to syntax, invalid parameters, or <b>DTE</b> functionality.  Parameter: <n> - enable flag 0 - disable +CME ERROR:<err> reports, use only <b>ERROR</b> report. 1 - enable +CME ERROR:<err> reports, with <err> in numeric format 2 - enable +CME ERROR:<err> reports, with <err> in verbose format	
<b>AT+CMEE?</b>	Read command returns the current value of subparameter <n>:  <b>+CMEE: &lt;n&gt;</b>	
<b>AT+CMEE=?</b>	Test command returns the range of values for subparameter <n>	
Note	<b>+CMEE</b> has no effect on the final result code <b>+CMS</b>	
Reference	3GPP TS 27.007	

### 3.5.4.5.2. Set CMEE mode - #CMEE MODE

#CMEE MODE – Set CMEE mode	SELINT 2
<b>AT#CMEE MODE=&lt;mode&gt;</b>	<p>This command allows to extend the set of error codes reported by CMEE to the GPRS related error codes.</p> <p>Parameters:</p> <p><b>&lt;mode&gt;:</b></p> <ul style="list-style-type: none"> <li>0 – disable support of GPRS related error codes by AT+CMEE ( default )</li> <li>1 – enable support of GPRS related error codes by AT+CMEE</li> </ul> <p>This parameter is stored in the user profile</p>
<b>AT#CMEE MODE?</b>	Read command reports the currently selected < mode > in the format: <b>#CMEE MODE: &lt;mode&gt;</b>
<b>AT#CMEE MODE =?</b>	Test command reports the supported range of values for parameter < mode >

### 3.5.4.6. Voice Control

#### 3.5.4.6.1. DTMF Tones Transmission - +VTS

+VTS - DTMF Tones Transmission	SELINT 0 / 1
<b>AT+VTS= &lt;dtmfstring&gt; [,duration]</b>	<p>Execution command allows the transmission of DTMF tones.</p> <p>Parameters:</p> <p><b>&lt;dtmfstring&gt;</b> - string of &lt;dtmf&gt;s, i.e. ASCII characters in the set (0-9), #,*,(A-D); it allows the user to send a sequence of DTMF tones, each of them with a duration that was defined through +VTD command.</p> <p><b>&lt;duration&gt;</b> - duration of a tone in 1/100 sec.; this parameter can be specified only if the length of first parameter is just one ASCII character</p> <ul style="list-style-type: none"> <li>0 - a single DTMF tone will be transmitted for a duration depending on the network, no matter what the current +VTD setting is.</li> <li>1..255 - a single DTMF tone will be transmitted for a time &lt;duration&gt; (in 10 ms multiples), no matter what the current +VTD setting is.</li> </ul> <p>Note: this commands operates in voice mode only (see +FCLASS).</p> <p>Note: the character P does not correspond to any DTMF tone, but it is interpreted as a pause of 3 seconds between the preceding and succeeding DTMF string elements</p>
<b>AT+VTS=?</b>	<p>For compatibility with previous versions, Test command returns <b>+VTS: 0,0,0</b></p> <p>An enhanced version of Test command has been defined: <b>AT+VTS=??</b>, that provides the correct range of values for &lt;DTMF&gt;.</p>

+VTS - DTMF Tones Transmission		SELINT 0 / 1
AT+VTS=??	Test command provides the list of supported <dtmf>s and the list of supported <duration>s in the format:  <b>(list of supported &lt;dtmf&gt;s)[,(list of supported &lt;duration&gt;s)]</b>	
Reference	3GPP TS 27.007 and TIA IS-101	

+VTS - DTMF Tones Transmission		SELINT 2
AT+VTS= <dtmfstring> [,duration]	<p>Execution command allows the transmission of DTMF tones.</p> <p>Parameters:</p> <p>&lt;dtmfstring&gt; - string of &lt;dtmf&gt;s, i.e. ASCII characters in the set <b>(0-9), #,*,(A-D),P</b>; it allows the user to send a sequence of DTMF tones, each of them with a duration that was defined through +VTD command.</p> <p>&lt;duration&gt; - duration of a tone in 1/100 sec.; this parameter can be specified only if the length of first parameter is just one ASCII character</p> <p>0 - a single DTMF tone will be transmitted for a duration depending on the network, no matter what the current +VTD setting is.</p> <p>1..255 - a single DTMF tone will be transmitted for a time &lt;duration&gt; (in 10 ms multiples), no matter what the current +VTD setting is.</p> <p>Note: this commands operates in voice mode only (see +FCLASS).</p> <p>Note: the character P does not correspond to any DTMF tone, but it is interpreted as a pause of 3 seconds between the preceding and succeeding DTMF string elements</p>	
AT+VTS=?	<p>Test command provides the list of supported &lt;dtmf&gt;s and the list of supported &lt;duration&gt;s in the format:  <b>(list of supported &lt;dtmf&gt;s)[,(list of supported &lt;duration&gt;s)]</b></p>	
Reference	3GPP TS 27.007 and TIA IS-101	

### 3.5.4.6.2. Tone Duration - +VTD

+VTD - Tone Duration		SELINT 0 / 1
AT+VTD[= <duration>]	<p>Set command sets the length of tones transmitted with +VTS command.</p> <p>Parameter:  <b>&lt;duration&gt;</b> - duration of a tone            0 - the duration of every single tone is dependent on the network (factory default)            1..255 - duration of every single tone in 1/10 sec.</p> <p>Note: If parameter is omitted the behavior of Set command is the same as Read command.</p>	
AT+VTD?	Read command reports the current Tone Duration, in the format:  <b>&lt;duration&gt;</b>	
AT+VTD=?	Test command provides the list of supported <b>&lt;duration&gt;s</b> in the format:  <b>(list of supported &lt;duration&gt;s)</b>	
Reference	3GPP TS 27.007 and TIA IS-101	

+VTD - Tone Duration		SELINT 2
AT+VTD= <duration>	<p>Set command sets the length of tones transmitted with +VTS command.</p> <p>Parameter:  <b>&lt;duration&gt;</b> - duration of a tone            0 - the duration of every single tone is dependent on the network (factory default)            1..255 - duration of every single tone in 1/10 sec.</p>	
AT+VTD?	Read command reports the current Tone Duration, in the format:  <b>&lt;duration&gt;</b>	
AT+VTD=?	Test command provides the list of supported <b>&lt;duration&gt;s</b> in the format:  <b>(list of supported &lt;duration&gt;s)</b>	
Reference	3GPP TS 27.007 and TIA IS-101	

### 3.5.4.7. Commands For GPRS

#### 3.5.4.7.1. GPRS Mobile Station Class - +CGCLASS

+CGCLASS - GPRS Mobile Station Class		SELINT 0 / 1
AT+CGCLASS [=<class>]	<p>Set command sets the GPRS class according to &lt;class&gt; parameter.</p> <p>Parameter:</p> <p>&lt;class&gt; - GPRS class          “B” - GSM/GPRS (factory default)          “CG” - class C in GPRS only mode (GPRS only)          “CC” - class C in circuit switched only mode (GSM only)</p> <p>Note: the setting is saved in NVM (and available on following reboot).</p> <p>Note: if parameter &lt;class&gt; is omitted, then the behaviour of Set command is the same as Read command.</p>	
AT+CGCLASS?	Read command returns the current value of the GPRS class in the format:  +CGLASS: <class>	
AT+CGCLASS=?	Test command reports the range for the parameter <class>	

+CGCLASS - GPRS mobile station class		SELINT 2
AT+CGCLASS= [<class>]	<p>Set command sets the GPRS class according to &lt;class&gt; parameter.</p> <p>Parameter:</p> <p>&lt;class&gt; - GPRS class          “B” - GSM/GPRS (factory default)          “CG” - class C in GPRS only mode (GPRS only)          “CC” - class C in circuit switched only mode (GSM only)</p> <p>Note: the setting is saved in NVM (and available on following reboot).</p>	
AT+CGCLASS?	Read command returns the current value of the GPRS class in the format:  +CGLASS: <class>	
AT+CGCLASS=?	Test command reports the range for the parameter <class>	

### 3.5.4.7.2. GPRS Attach Or Detach - +CGATT

<b>+CGATT - GPRS Attach Or Detach</b>		<b>SELINT 0 / 1</b>
<b>AT+CGATT[= &lt;state&gt;]</b>	Execution command is used to attach the terminal to, or detach the terminal from, the GPRS service depending on the parameter <state>.  Parameter: <state> - state of GPRS attachment 0 - detached 1 - attached  Note: If the parameter is omitted the behavior of Execution command is the same as Read command.	
<b>AT+CGATT?</b>	Read command returns the current GPRS service state.	
<b>AT+CGATT=?</b>	Test command requests information on the supported GPRS service states.	
Example	AT+CGATT? +CGATT: 0  OK AT+CGATT=? +CGATT: (0,1)  OK AT+CGATT=1 OK	<b>SELINT 2</b>
Reference	3GPP TS 27.007	
<b>AT+CGATT=[ &lt;state&gt;]</b>		<b>SELINT 2</b>
<b>AT+CGATT=[ &lt;state&gt;]</b>	Execution command is used to attach the terminal to, or detach the terminal from, the GPRS service depending on the parameter <state>.  Parameter: <state> - state of GPRS attachment 0 - detached 1 - attached	
<b>AT+CGATT?</b>	Read command returns the current GPRS service state.	
<b>AT+CGATT=?</b>	Test command requests information on the supported GPRS service states.	
Example	AT+CGATT? +CGATT: 0  OK AT+CGATT=? +CGATT: (0,1)  OK AT+CGATT=1 OK	
Reference	3GPP TS 27.007	

### 3.5.4.7.3. GPRS Event Reporting - +CGEREP

<b>+CGEREP - GPRS Event Reporting</b>		<b>SELINT 2</b>
<b>AT+CGEREP=</b> [<mode>[,<bfr>]]	<p>Set command enables or disables sending of unsolicited result codes +CGEV: <b>XXX</b> (see below) from <b>TA</b> to <b>TE</b> in the case of certain events occurring in the <b>TA</b> or the network.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;mode&gt; - controls the processing of <b>URCs</b> specified with this command           <ul style="list-style-type: none"> <li>0 - Buffer unsolicited result codes in the <b>TA</b>. If <b>TA</b> result code buffer is full, the oldest one can be discarded. No codes are forwarded to the <b>TE</b>.</li> <li>1 - Discard unsolicited result codes when <b>TA-TE</b> link is reserved (e.g. in on-line data mode); otherwise forward them directly to the <b>TE</b>.</li> <li>2 - Buffer unsolicited result codes in the <b>TA</b> when <b>TA-TE</b> link is reserved (e.g. in on-line data mode) and flush them to the <b>TE</b> when <b>TA-TE</b> link becomes available; otherwise forward them directly to the <b>TE</b>.</li> </ul> </li> <li>&lt;bfr&gt; - controls the effect on buffered codes when &lt;mode&gt; <b>1</b> or <b>2</b> is entered:           <ul style="list-style-type: none"> <li>0 - <b>TA</b> buffer of unsolicited result codes defined within this command is cleared when &lt;mode&gt;=<b>1</b> or <b>2</b> is entered.</li> <li>1 - <b>TA</b> buffer of unsolicited result codes defined within this command is flushed to the <b>TE</b> when &lt;mode&gt;=<b>1</b> or <b>2</b> is entered (<b>OK</b> response shall be given before flushing the codes)</li> </ul> </li> </ul>	

#### Unsolicited Result Codes

The following unsolicited result codes and the corresponding events are defined:

##### +CGEV: REJECT <PDP\_type>, <PDP\_addr>

A network request for PDP context activation occurred when the **TA** was unable to report it to the **TE** with a +CRING unsolicited result code and was automatically rejected

##### +CGEV: NW REACT <PDP\_type>, <PDP\_addr>, [<cid>]

The network has requested a context reactivation. The <cid> that was used to reactivate the context is provided if known to **TA**

##### +CGEV: NW DEACT <PDP\_type>, <PDP\_addr>, [<cid>]

The network has forced a context deactivation. The <cid> that was used to activate the context is provided if known to **TA**

##### +CGEV: ME DEACT <PDP\_type>, <PDP\_addr>, [<cid>]

The mobile equipment has forced a context deactivation. The <cid> that was used to activate the context is provided if known to **TA**

##### +CGEV: NW DETACH

The network has forced a GPRS detach. This implies that all active contexts have been deactivated. These are not reported separately

##### +CGEV: ME DETACH

The mobile equipment has forced a GPRS detach. This implies that all active

<b>+CGEREP - GPRS Event Reporting</b>		<b>SELINT 2</b>
	contexts have been deactivated. These are not reported separately	
	<b>+CGEV: ME CLASS &lt;class&gt;</b> The mobile equipment has forced a change of MS class. The highest available class is reported (see +CGCLASS)	
<b>AT+CGEREP?</b>	Read command returns the current <mode> and <bfr> settings, in the format:  <b>+CGEREP: &lt;mode&gt;,&lt;bfr&gt;</b>	
<b>AT+CGEREP=?</b>	Test command reports the supported range of values for the +CGEREP command parameters.	
Reference	3GPP TS 27.007	

### 3.5.4.7.4. GPRS Network Registration Status - +CGREG

<b>+CGREG - GPRS Network Registration Status</b>		<b>SELINT 0 / 1</b>
<b>AT+CGREG[= [&lt;n&gt;]]</b>	<p>Set command controls the presentation of an unsolicited result code  <b>+CGREG:</b> (see format below).</p> <p>Parameter:  &lt;n&gt; - result code presentation mode  0 - disable network registration unsolicited result code  1 - enable network registration unsolicited result code; if there is a change in the terminal GPRS network registration status, it is issued the unsolicited result code:</p> <p><b>+CGREG: &lt;stat&gt;</b></p> <p>where:  <b>&lt;stat&gt;</b> - registration status  0 - not registered, terminal is not currently searching a new operator to register to  1 - registered, home network  2 - not registered, but terminal is currently searching a new operator to register to  3 - registration denied  4 - unknown  5 - registered, roaming  2 - enable network registration and location information unsolicited result code; if there is a change of the network cell, it is issued the unsolicited result code:</p> <p><b>+CGREG: &lt;stat&gt;[,&lt;lac&gt;,&lt;ci&gt;]</b></p> <p>where:  <b>&lt;stat&gt;</b> - registration status (see above for values)  <b>&lt;lac&gt;</b> - location area code in hexadecimal format (e.g. "00C3" equals 195 in</p>	

<b>+CGREG - GPRS Network Registration Status</b>		<b>SELINT 0 / 1</b>
	<p style="text-align: center;">decimal)  <b>&lt;ci&gt;</b> - cell ID in hexadecimal format</p> <p>Note: <b>&lt;lac&gt;</b> and <b>&lt;Ci&gt;</b> are reported only if <b>&lt;mode&gt;=2</b> and the mobile is registered on some network cell.</p> <p>Note: issuing <b>AT+CGREG&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+CGREG=&lt;CR&gt;</b> is the same as issuing the command <b>AT+CGREG=0&lt;CR&gt;</b>.</p>	
<b>AT+CGREG?</b>	<p>Read command returns the status of result code presentation mode <b>&lt;n&gt;</b> and the integer <b>&lt;stat&gt;</b> which shows whether the network has currently indicated the registration of the terminal in the format:</p> <p><b>+CGREG:&lt;n&gt;,&lt;stat&gt;[,&lt;lac&gt;,&lt;ci&gt;]</b></p> <p>Note: <b>&lt;lac&gt;</b> and <b>&lt;Ci&gt;</b> are reported only if <b>&lt;mode&gt;=2</b> and the mobile is registered on some network cell.</p>	
<b>AT+CGREG=?</b>	Test command returns supported values for parameter <b>&lt;n&gt;</b>	
Reference	3GPP TS 27.007	

<b>+CGREG - GPRS Network Registration Status</b>		<b>SELINT 2</b>
<b>AT+CGREG=[&lt;n&gt;]</b>	<p>Set command controls the presentation of an unsolicited result code <b>+CGREG:</b> (see format below).</p> <p>Parameter:</p> <p><b>&lt;n&gt;</b> - result code presentation mode</p> <ul style="list-style-type: none"> <li>0 - disable network registration unsolicited result code</li> <li>1 - enable network registration unsolicited result code; if there is a change in the terminal GPRS network registration status, it is issued the unsolicited result code:</li> </ul> <p><b>+CGREG: &lt;stat&gt;</b></p> <p>where:</p> <p><b>&lt;stat&gt;</b> - registration status</p> <ul style="list-style-type: none"> <li>0 - not registered, terminal is not currently searching a new operator to register to</li> <li>1 - registered, home network</li> <li>2 - not registered, but terminal is currently searching a new operator to register to</li> <li>3 - registration denied</li> <li>4 - unknown</li> <li>5 - registered, roaming</li> </ul> <p>2 - enable network registration and location information unsolicited result code; if there is a change of the network cell, it is issued the unsolicited result code:</p>	

+CGREG - GPRS Network Registration Status		SELINT 2
	<p>+CGREG: &lt;stat&gt;[,&lt;lac&gt;,&lt;ci&gt;]</p> <p>where:</p> <p>&lt;stat&gt; - registration status (see above for values)</p> <p>&lt;lac&gt; - location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal)</p> <p>&lt;ci&gt; - cell ID in hexadecimal format.</p> <p>Note: &lt;lac&gt; and &lt;Ci&gt; are reported only if &lt;mode&gt;=2 and the mobile is registered on some network cell.</p>	
AT+CGREG?	<p>Read command returns the status of result code presentation mode &lt;n&gt; and the integer &lt;stat&gt; which shows whether the network has currently indicated the registration of the terminal in the format:</p> <p>+CGREG: &lt;n&gt;,&lt;stat&gt;[,&lt;lac&gt;,&lt;ci&gt;]</p> <p>Note: &lt;lac&gt; and &lt;Ci&gt; are reported only if &lt;mode&gt;=2 and the mobile is registered on some network cell.</p>

### 3.5.4.7.7. Quality Of Service Profile - +CGQREQ

+CGQREQ - Quality Of Service Profile (Requested)		SELINT 0 / 1
AT+CGQREQ[=<cid>[,<precedence>[,<delay>[,<reliability>[,<peak>[,<mean>]]]]]]]	<p>Set command allows to specify a Quality of Service Profile that is used when the terminal sends an Activate PDP Context Request message to the network. It specifies a profile for the context identified by the (local) context identification parameter, &lt;cid&gt;.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;cid&gt; - PDP context identification (see +CGDCONT command).</li> <li>&lt;precedence&gt; - precedence class</li> <li>&lt;delay&gt; - delay class</li> <li>&lt;reliability&gt; - reliability class</li> <li>&lt;peak&gt; - peak throughput class</li> <li>&lt;mean&gt; - mean throughput class</li> </ul> <p>If a value is omitted for a particular class then this class is not checked.</p> <p>Note: a special form of the Set command, +CGQREQ=&lt;cid&gt; causes the requested profile for context number &lt;cid&gt; to become undefined.</p> <p>Note: issuing AT+CGQREQ&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT+CGQREQ=&lt;CR&gt; returns the <b>OK</b> result code.</p>	
AT+CGQREQ?	Read command returns the current settings for each defined context in the format:	

+CGQREQ: <cid>,<precedence>,<delay>,<reliability>,<peak>,

<b>+CGQREQ - Quality Of Service Profile (Requested)</b>		<b>SELINT 0 / 1</b>
	<mean><CR><LF>[<CR><LF>+CGQREQ: <cid>,<precedence>,<delay>,<reliability>,<peak>,<mean><CR><LF>[...]]	If no PDP context has been defined, it has no effect and <b>OK</b> result code is returned.
<b>AT+CGQREQ=?</b>	<p>Test command returns as a compound value the type of the current PDP context and the supported values for the subparameters in the format:</p> <p><b>+CGQREQ: &lt;PDP_Type&gt;,(list of supported &lt;precedence&gt;s),(list of supported &lt;delay&gt;s),(list of supported &lt;reliability&gt;s),(list of supported &lt;peak&gt;s),(list of supported &lt;mean&gt;s)</b></p> <p>Note: only the “IP” PDP_Type is currently supported.</p>	
Example	<pre>AT+CGQREQ? +CGQREQ: 1,0,0,3,0,0  OK AT+CGQREQ=1,0,0,3,0,0 OK AT+CGQREQ=? +CGQREQ: "IP",(0-3),(0-4),(0-5),(0-9),(0-19,31)  OK</pre>	
Reference	3GPP TS 27.007; GSM 03.60	

<b>+CGQREQ - Quality Of Service Profile (Requested)</b>		<b>SELINT 2</b>
<b>AT+CGQREQ= [&lt;cid&gt; [,&lt;precedence&gt; [,&lt;delay&gt; [,&lt;reliability&gt; [,&lt;peak&gt; [,&lt;mean&gt;]]]]]</b>	<p>Set command allows to specify a Quality of Service Profile that is used when the terminal sends an Activate PDP Context Request message to the network. It specifies a profile for the context identified by the (local) context identification parameter, <b>&lt;cid&gt;</b>.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;cid&gt; - PDP context identification (see <b>+CGDCONT</b> command).</li> <li>&lt;precedence&gt; - precedence class</li> <li>&lt;delay&gt; - delay class</li> <li>&lt;reliability&gt; - reliability class</li> <li>&lt;peak&gt; - peak throughput class</li> <li>&lt;mean&gt; - mean throughput class</li> </ul> <p>If a value is omitted for a particular class then this class is not checked.</p> <p>Note: a special form of the Set command, <b>+CGQREQ=&lt;cid&gt;</b> causes the requested profile for context number <b>&lt;cid&gt;</b> to become undefined.</p>	
<b>AT+CGQREQ?</b>	Read command returns the current settings for each defined context in the format:	
	<p><b>+CGQREQ: &lt;cid&gt;,&lt;precedence&gt;,&lt;delay&gt;,&lt;reliability&gt;,&lt;peak&gt;,&lt;mean&gt;[&lt;CR&gt;&lt;LF&gt;+CGQREQ: &lt;cid&gt;,&lt;precedence&gt;,&lt;delay&gt;,&lt;reliability&gt;,&lt;peak&gt;,&lt;mean&gt;[...]]</b></p>	

<b>+CGQREQ - Quality Of Service Profile (Requested)</b>		<b>SELINT 2</b>
	If no PDP context has been defined, it has no effect and <b>OK</b> result code is returned.	
<b>AT+CGQREQ=?</b>	<p>Test command returns as a compound value the type of the current PDP context and the supported values for the subparameters in the format:</p> <p><b>+CGQREQ: &lt;PDP_Type&gt;,(list of supported &lt;precedence&gt;s), (list of supported &lt;delay&gt;s),(list of supported &lt;reliability&gt;s), (list of supported &lt;peak&gt;s),(list of supported &lt;mean&gt;s)</b></p> <p>Note: only the “IP” PDP_Type is currently supported.</p>	
Example	<pre>AT+CGQREQ?  +CGQREQ: 1,0,0,3,0,0  OK  AT+CGQREQ=1,0,0,3,0,0  OK  AT+CGQREQ=?  +CGQREQ: "IP",(0-3),(0-4),(0-5),(0-9),(0-18,31)  OK</pre>	
Reference	3GPP TS 27.007; GSM 03.60	

### 3.5.4.7.8. PDP Context - +CGACT

<b>+CGACT - PDP Context Activate Or Deactivate</b>		<b>SELINT 0 / 1</b>
<b>AT+CGACT[=&lt;state&gt;[,&lt;cid&gt;[,&lt;cid&gt;[,...]]]]</b>	<p>Execution command is used to activate or deactivate the specified PDP context(s)</p> <p>Parameters:</p> <p>&lt;state&gt; - indicates the state of PDP context activation</p> <ul style="list-style-type: none"> <li>0 - deactivated</li> <li>1 - activated</li> </ul> <p>&lt;cid&gt; - a numeric parameter which specifies a particular PDP context definition (see <b>+CGDCONT</b>)</p> <p>Note: if no &lt;cid&gt;s are specified the activation/deactivation form of the command activates/deactivates all defined contexts.</p> <p>Note: issuing <b>AT+CGACT&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+CGACT=&lt;CR&gt;</b> returns the <b>OK</b> result code.</p>	
<b>AT+CGACT?</b>	Read command returns the current activation state for all the defined PDP contexts in the format:	
	<b>+CGACT: &lt;cid&gt;,&lt;state&gt;&lt;CR&gt;&lt;LF&gt;[&lt;CR&gt;&lt;LF&gt;+CGACT:&lt;cid&gt;,&lt;state&gt;&lt;CR&gt;&lt;LF&gt;[...]]</b>	
<b>AT+CGACT=?</b>	Test command reports information on the supported PDP context activation states parameters in the format:	

<b>+CGACT - PDP Context Activate Or Deactivate</b>		<b>SELINT 0 / 1</b>
	<b>+CGACT: (0-1)</b>	
Example	AT+CGACT? +CGACT: 1,1 OK AT+CGACT=1,1 OK	
Reference	3GPP TS 27.007	

<b>+CGACT - PDP Context Activate Or Deactivate</b>		<b>SELINT 2</b>
<b>AT+CGACT= [&lt;state&gt;[,&lt;cid&gt; [,&lt;cid&gt;[,...]]]]</b>	Execution command is used to activate or deactivate the specified PDP context(s) Parameters: <b>&lt;state&gt;</b> - indicates the state of PDP context activation 0 - deactivated 1 - activated <b>&lt;cid&gt;</b> - a numeric parameter which specifies a particular PDP context definition (see <b>+CGDCONT</b> command)  Note: if no <b>&lt;cid&gt;</b> s are specified the activation/deactivation form of the command activates/deactivates all defined contexts.	
<b>AT+CGACT?</b>	Read command returns the current activation state for all the defined PDP contexts in the format:	<b>+CGACT: &lt;cid&gt;,&lt;state&gt;[&lt;CR&gt;&lt;LF&gt;+CGACT: &lt;cid&gt;,&lt;state&gt;[...]]</b>
<b>AT+CGACT=?</b>	Test command reports information on the supported PDP context activation states parameters in the format:	<b>+CGACT: (0,1)</b>
Example	AT+CGACT=1,1 OK AT+CGACT? +CGACT: 1,1 OK	
Reference	3GPP TS 27.007	

### 3.5.4.7.9. Show PDP Address - +CGPADDR

<b>+CGPADDR - Show PDP Address</b>		<b>SELINT 0 / 1</b>
<b>AT+CGPADDR= [&lt;cid&gt;[,&lt;cid&gt; [,...]]]</b>	Execution command returns a list of PDP addresses for the specified context identifiers in the format:	<b>+CGPADDR: &lt;cid&gt;[,&lt;PDP_addr&gt;]&lt;CR&gt;&lt;LF&gt;[&lt;CR&gt;&lt;LF&gt;+CGPADDR: &lt;cid&gt;[,&lt;PDP_addr&gt;]&lt;CR&gt;&lt;LF&gt;[...]]]</b>

+CGPADDR - Show PDP Address		SELINT 0 / 1
	Parameters: <b>&lt;cid&gt;</b> - a numeric parameter which specifies a particular PDP context definition (see +CGDCONT command). If no <b>&lt;cid&gt;</b> is specified, the addresses for all defined contexts are returned. <b>&lt;PDP_addr&gt;</b> - a string that identifies the terminal in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the +CGDCONT command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to by <b>&lt;cid&gt;</b> ; if no address is available the <b>&lt;PDP_addr&gt;</b> parameter is not shown	
AT+CGPADDR=?	Test command returns a list of defined <b>&lt;cid&gt;</b> s.	
Example	<pre>AT#GPRS=1 +IP: xxx.yyy.zzz.www  OK AT+CGPADDR=1 +CGPADDR: 1,"xxx.yyy.zzz.www"  OK AT+CGPADDR=? +CGPADDR: (1)  OK</pre>	
Reference	3GPP TS 27.007	

+CGPADDR - Show PDP Address		SELINT 2
AT+CGPADDR=[<cid>[,<cid>[,...]]]	Execution command returns a list of PDP addresses for the specified context identifiers in the format:  <b>+CGPADDR: &lt;cid&gt;,&lt;PDP_addr&gt;[&lt;CR&gt;&lt;LF&gt;+CGPADDR: &lt;cid&gt;,&lt;PDP_addr&gt;[...]]</b> Parameters: <b>&lt;cid&gt;</b> - a numeric parameter which specifies a particular PDP context definition (see +CGDCONT command). If no <b>&lt;cid&gt;</b> is specified, the addresses for all defined contexts are returned. <b>&lt;PDP_addr&gt;</b> - a string that identifies the terminal in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the +CGDCONT command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to by <b>&lt;cid&gt;</b> ; if no address is available the empty string ("") is represented as <b>&lt;PDP_addr&gt;</b>	
AT+CGPADDR=?	Test command returns a list of defined <b>&lt;cid&gt;</b> s.	

+CGPADDR - Show PDP Address		SELINT 2
Example	<pre>AT#GPRS=1 +IP: xxx.yyy.zzz.www  OK AT+CGPADDR=1 +CGPADDR: 1,"xxx.yyy.zzz.www"  OK AT+CGPADDR=? +CGPADDR: (1)  OK</pre>	
Reference	3GPP TS 27.007	

### 3.5.4.7.10. Enter Data State - +CGDATA

+CGDATA - Enter Data State		SELINT 0 / 1
AT+CGDATA=[<L2P>,[<cid>[,<cid>[,...]]]]	<p>Execution command causes to perform whatever actions are necessary to establish a communication with the network using one or more GPRS PDP types.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;L2P&gt; - string parameter that indicates the layer 2 protocol to be used "PPP" - PPP Point-to-point protocol</li> <li>&lt;cid&gt; - numeric parameter which specifies a particular PDP context definition (see +CGDCONT command).</li> </ul> <p>Note: if parameter &lt;L2P&gt; is omitted, the layer 2 protocol is unspecified</p>	
AT+CGDATA=?	<p>Test command reports information on the supported layer 2 protocols.</p> <p>Note: the representation format of the Test command output is not included in parenthesis</p>	
Example	<pre>AT+CGDATA=? +CGDATA: "PPP"  OK AT+CGDATA="PPP",1 CONNECT</pre>	
Reference	3GPP TS 27.007	

+CGDATA - Enter Data State		SELINT 2
AT+CGDATA=[<L2P>,[<cid>[,<cid>[,...]]]]	<p>Execution command causes to perform whatever actions are necessary to establish a communication with the network using one or more GPRS PDP types.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;L2P&gt; - string parameter that indicates the layer 2 protocol to be used "PPP" - PPP Point-to-point protocol</li> <li>&lt;cid&gt; - numeric parameter which specifies a particular PDP context definition (see +CGDCONT command).</li> </ul>	

<b>+CGDATA - Enter Data State</b>		<b>SELINT 2</b>
	Note: if parameter <L2P> is omitted, the layer 2 protocol is unspecified	
<b>AT+CGDATA=?</b>	Test command reports information on the supported layer 2 protocols.	
Example	<pre>AT+CGDATA=? +CGDATA: ("PPP")</pre> <p>OK      AT+CGDATA="PPP",1      CONNECT</p>	
Reference	3GPP TS 27.007	

### 3.5.4.7.11. Modify PDP context - +CGCMOD

<b>+CGCMOD – Modify PDP context</b>		<b>SELINT 2</b>
<b>AT+CGCMOD=[&lt;cid1&gt;[,&lt;cid2&gt;[,...,&lt;cidN&gt;]]]</b>	<p>The execution command is used to modify the specified PDP context(s) with respect to QoS profiles.</p> <p>If no &lt;cid&gt; is specified the command modifies all active contexts.</p> <p>Parameters:</p> <p>&lt;cid&gt;: a numeric parameter which specifies a particular PDP context</p>	
<b>AT+CGCMOD=?</b>	Test command returns a list of <cid>s associated with active contexts.	

### 3.5.4.8. Commands For Battery Charger

#### 3.5.4.8.1. Battery Charge - +CBC

<b>+CBC - Battery Charge</b>		<b>SELINT 0 / 1</b>
<b>AT+CBC</b>	<p>Execution command returns the current Battery Charge status in the format:</p> <p><b>+CBC: &lt;bcs&gt;,&lt;bcl&gt;</b></p> <p>where:</p> <p>&lt;bcs&gt; - battery charge status</p> <ul style="list-style-type: none"> <li>0 - ME is powered by the battery</li> <li>1 - ME has a battery connected, and charger pin is being powered</li> <li>2 - ME does not have a battery connected</li> <li>3 - Recognized power fault, calls inhibited</li> </ul> <p>&lt;bcl&gt; - battery charge level, only if &lt;bcs&gt;=0</p> <ul style="list-style-type: none"> <li>0 - battery is exhausted, or ME does not have a battery connected</li> <li>25 - battery charge remained is estimated to be 25%</li> <li>50 - battery charge remained is estimated to be 50%</li> <li>75 - battery charge remained is estimated to be 75%</li> <li>100 - battery is fully charged.</li> </ul>	

<b>+CBC - Battery Charge</b>		<b>SELINT 0 / 1</b>
	<p>Note: &lt;bcs&gt;=1 indicates that the battery charger supply is inserted and the battery is being recharged if necessary with it. Supply for <b>ME</b> operations is taken anyway from VBATT pins.</p> <p>Note: without battery/power connected on VBATT pins or during a power fault the unit is not working, therefore values &lt;bcs&gt;=2 and &lt;bcs&gt;=3 will never appear.</p> <p>Note: &lt;bcl&gt; indicates battery charge level only if battery is connected and charger is not connected</p>	
<b>AT+CBC?</b>	Read command has the same effect as Execution command.	
<b>AT+CBC=?</b>	<p>Test command returns parameter values supported as a compound value. For compatibility with previous versions, Test command returns</p> <p><b>+CBC: (0-2),(0-100)</b></p> <p>An enhanced version of Test command has been defined: <b>AT+CBC=??</b>, that provides the complete range of values for &lt;bcs&gt; and &lt;bcl&gt;.</p> <p>Note: although +CBC is an execution command, ETSI 07.07 requires the Test command to be defined.</p>	
<b>AT+CBC=??</b>	Enhanced test command returns the complete range of values for <bcs> and <bcl>:  <b>+CBC: (0-3),(0-100)</b>	
Example	AT+CBC +CBC: 0,75  OK	
Note	The <b>ME</b> does not make differences between being powered by a battery or by a power supply on the VBATT pins, so it is not possible to distinguish between these two cases.	
Reference	3GPP TS 27.007	

<b>+ CBC - Battery Charge</b>		<b>SELINT 2</b>
<b>AT+CBC</b>	<p>Execution command returns the current Battery Charge status in the format:</p> <p><b>+CBC: &lt;bcs&gt;,&lt;bcl&gt;</b></p> <p>where:</p> <p>&lt;bcs&gt; - battery status</p> <ul style="list-style-type: none"> <li>0 - <b>ME</b> is powered by the battery</li> <li>1 - <b>ME</b> has a battery connected, and charger pin is being powered</li> <li>2 - <b>ME</b> does not have a battery connected</li> <li>3 - Recognized power fault, calls inhibited</li> </ul> <p>&lt;bcl&gt; - battery charge level, only if &lt;bcs&gt;=0</p> <ul style="list-style-type: none"> <li>0 - battery is exhausted, or <b>ME</b> does not have a battery connected</li> <li>25 - battery charge remained is estimated to be 25%</li> <li>50 - battery charge remained is estimated to be 50%</li> </ul>	

<b>+ CBC - Battery Charge</b>		<b>SELINT 2</b>
	<p>75 - battery charge remained is estimated to be 75%            100 - battery is fully charged.</p> <p>Note: &lt;bcs&gt;=1 indicates that the battery charger supply is inserted and the battery is being recharged if necessary with it. Supply for <b>ME</b> operations is taken anyway from <b>VBATT</b> pins.</p> <p>Note: without battery/power connected on <b>VBATT</b> pins or during a power fault the unit is not working, therefore values &lt;bcs&gt;=2 and &lt;bcs&gt;=3 will never appear.</p> <p>Note: &lt;bcl&gt; indicates battery charge level only if battery is connected and charger is not connected</p>	
<b>AT+CBC=?</b>	<p>Test command returns parameter values supported as a compound value.</p> <p><b>+CBC: (0-3),(0-100)</b></p> <p>Note: although <b>+CBC</b> is an execution command, ETSI 07.07 requires the Test command to be defined.</p>	
Example	AT+CBC +CBC: 0,75 OK	
Note	The <b>ME</b> does not make differences between being powered by a battery or by a power supply on the <b>VBATT</b> pins, so it is not possible to distinguish between these two cases.	
Reference	3GPP TS 27.007	

### 3.5.5. 3GPP TS 27.005 AT Commands for SMS and CBS

#### 3.5.5.1. General Configuration

##### 3.5.5.1.1. Select Message Service - +CSMS

<b>+CSMS - Select Message Service</b>		<b>SELINT 0 / 1</b>
<b>AT+CSMS [=&lt;service&gt;]</b>	<p>Set command selects messaging service &lt;service&gt;. It returns the types of messages supported by the <b>ME</b>:</p> <p>Parameter:  <b>&lt;service&gt;</b>            0 - The syntax of SMS AT commands is compatible with GSM 27.005 (factory default)</p> <p>Set command returns current service setting along with the types of messages supported by the <b>ME</b>:</p>	

<b>+CSMS - Select Message Service</b>		<b>SELINT 0 / 1</b>
	<p><b>+CSMS: &lt;service&gt;,&lt;mt&gt;,&lt;mo&gt;,&lt;bm&gt;</b></p> <p>where:</p> <p>&lt;<b>mt</b>&gt; - mobile terminated messages support            0 - type not supported            1 - type supported</p> <p>&lt;<b>mo</b>&gt; - mobile originated messages support            0 - type not supported            1 - type supported</p> <p>&lt;<b>bm</b>&gt; - broadcast type messages support            0 - type not supported            1 - type supported</p> <p>Note: If parameter is omitted then the behavior of Set command is the same as Read command.</p>	
<b>AT+CSMS?</b>	<p>Read command reports current service setting along with supported message types in the format:</p> <p><b>+CSMS: &lt;service&gt;,&lt;mt&gt;,&lt;mo&gt;,&lt;bm&gt;</b></p> <p>where:</p> <p>&lt;<b>service</b>&gt; - messaging service (see above)</p> <p>&lt;<b>mt</b>&gt; - mobile terminated messages support (see above)</p> <p>&lt;<b>mo</b>&gt; - mobile originated messages support (see above)</p> <p>&lt;<b>bm</b>&gt; - broadcast type messages support (see above)</p>	
<b>AT+CSMS=?</b>	<p>Test command reports a list of all services supported by the device. The supported value of the parameter &lt;<b>service</b>&gt;.</p>	
Reference	GSM 27.005; 3GPP TS 23.040; 3GPP TS 23.041	

<b>+CSMS - Select Message Service</b>		<b>SELINT 2</b>
<b>AT+CSMS= &lt;service&gt;</b>	<p>Set command selects messaging service &lt;<b>service</b>&gt;. It returns the types of messages supported by the <b>ME</b>:</p> <p>Parameter:  <b>&lt;service&gt;</b>            0 - The syntax of SMS AT commands is compatible with GSM 27.005 (factory default)</p> <p>Set command returns the types of messages supported by the <b>ME</b>:</p> <p><b>+CSMS: &lt;mt&gt;,&lt;mo&gt;,&lt;bm&gt;</b></p> <p>where:</p> <p>&lt;<b>mt</b>&gt; - mobile terminated messages support            0 - type not supported</p>	

<b>+CSMS - Select Message Service</b>		<b>SELINT 2</b>
	<p>1 - type supported  <b>&lt;mo&gt;</b> - mobile originated messages support  0 - type not supported  1 - type supported  <b>&lt;bm&gt;</b> - broadcast type messages support  0 - type not supported  1 - type supported</p>	
<b>AT+CSMS?</b>	Read command reports current service setting along with supported message types in the format:  <b>+CSMS: &lt;service&gt;,&lt;mt&gt;,&lt;mo&gt;,&lt;bm&gt;</b>  where: <b>&lt;service&gt;</b> - messaging service (see above) <b>&lt;mt&gt;</b> - mobile terminated messages support (see above) <b>&lt;mo&gt;</b> - mobile originated messages support (see above) <b>&lt;bm&gt;</b> - broadcast type messages support (see above)	
<b>AT+CSMS=?</b>	Test command reports the supported value of the parameter <b>&lt;service&gt;</b> .	
Reference	GSM 27.005; 3GPP TS 23.040; 3GPP TS 23.041	

### 3.5.5.1.2. Preferred Message Storage - +CPMS

<b>+CPMS - Preferred Message Storage</b>		<b>SELINT 0 / 1</b>
<b>AT+CPMS[=</b> <b>&lt;memr&gt;</b> <b>[,&lt;memw&gt;</b> <b>[,&lt;mems&gt;]]]</b>	<p>Set command selects memory storages <b>&lt;memr&gt;</b>, <b>&lt;memw&gt;</b> and <b>&lt;mems&gt;</b> to be used for reading, writing, sending and storing SMs.</p> <p>Parameters:</p> <p><b>&lt;memr&gt;</b> - memory from which messages are read and deleted  "SM" - SIM SMS memory storage  "ME" - ME internal storage</p> <p><b>&lt;memw&gt;</b> - memory to which writing and sending operations are made  "SM" - SIM SMS memory storage</p> <p><b>&lt;mems&gt;</b> - memory to which received SMs are preferred to be stored  "SM" - SIM SMS memory storage</p> <p>The command returns the memory storage status in the format:</p> <p><b>+CPMS: &lt;usedr&gt;,&lt;totalr&gt;,&lt;usedw&gt;,&lt;totalw&gt;,&lt;useds&gt;,&lt;totals&gt;</b></p> <p>where</p> <p><b>&lt;usedr&gt;</b> - number of SMs stored into <b>&lt;memr&gt;</b>  <b>&lt;totalr&gt;</b> - max number of SMs that <b>&lt;memr&gt;</b> can contain  <b>&lt;usedw&gt;</b> - number of SMs stored into <b>&lt;memw&gt;</b>  <b>&lt;totalw&gt;</b> max number of SMs that <b>&lt;memw&gt;</b> can contain  <b>&lt;useds&gt;</b> - number of SMs stored into <b>&lt;mems&gt;</b></p>	

<b>+CPMS - Preferred Message Storage</b>		<b>SELINT 0 / 1</b>
	<p>&lt;totals&gt; - max number of SMS that &lt;mems&gt; can contain</p> <p>Note: The only supported memory storage for writing and sending SMs is the SIM internal memory "SM", so &lt;memw&gt;=&lt;mems&gt;="SM".</p> <p>Note: the received class 0 SMS are stored in the "ME" memory regardless the &lt;mems&gt; setting and they are automatically deleted at power off.</p> <p>Note: If all parameters are omitted the behavior of Set command is the same as Read command.</p>	
<b>AT+CPMS?</b>	<p>Read command reports the message storage status in the format:</p> <p>+CPMS: &lt;memr&gt;,&lt;usedr&gt;,&lt;totalr&gt;,&lt;memw&gt;,&lt;usedw&gt;,&lt;totalw&gt;,&lt;mems&gt;,&lt;useds&gt;,&lt;totals&gt;</p> <p>where &lt;memr&gt;, &lt;memw&gt; and &lt;mems&gt; are the selected storage memories for reading, writing and storing respectively.</p>	
<b>AT+CPMS=?</b>	<p>Test command reports the supported values for parameters &lt;memr&gt;, &lt;memw&gt; and &lt;mems&gt;</p>	
Example	<p>AT+CPMS?</p> <p>+CPMS: "SM",5,10,"SM",5,10,"SM",5,10</p> <p>OK</p>	<i>you have 5 out of 10 SMS SIM positions occupied</i>
Reference	GSM 27.005	

<b>+CPMS - Preferred Message Storage</b>		<b>SELINT 2</b>
<p><i>Note: the behaviour of command +CPMS differs depending on whether or not the improved SMS commands operation mode has been enabled (see #SMSMODE)</i></p>		
(#SMSMODE=0)

### 3.5.5.1.3. Message Format - +CMGF

+CMGF - Message Format		SELINT 0 / 1
AT+CMGF[=<mode>]]	<p>Set command selects the format of messages used with send, list, read and write commands.</p> <p>Parameter:  <b>&lt;mode&gt;</b></p> <p>0 - PDU mode, as defined in GSM 3.40 and GSM 3.41 (factory default)          1 - text mode</p> <p>Note: issuing <b>AT+CMGF&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+CMGF=&lt;CR&gt;</b> is the same as issuing the command <b>AT+CMGF=0&lt;CR&gt;</b>.</p>	
<b>AT+CMGF?</b>	Read command reports the current value of the parameter <mode>.	
<b>AT+CMGF=?</b>	Test command reports the supported value of <mode> parameter.	
Reference	GSM 27.005	

+CMGF - Message Format		SELINT 2
<b>AT+CMGF=</b> [<mode>]	Set command selects the format of messages used with send, list, read and write commands.  Parameter: <b>&lt;mode&gt;</b> 0 - PDU mode, as defined in GSM 3.40 and GSM 3.41 (factory default) 1 - text mode	
<b>AT+CMGF?</b>	Read command reports the current value of the parameter <mode>.	
<b>AT+CMGF=?</b>	Test command reports the supported value of <mode> parameter.	
Reference	GSM 27.005	

### 3.5.5.2. Message Configuration

#### 3.5.5.2.1. Service Center Address - +CSCA

+CSCA - Service Center Address		SELINT 0 / 1
<b>AT+CSCA[=</b> [<number> [,<type>]]]	<p>Set command sets the Service Center Address to be used for mobile originated SMS transmissions.</p> <p>Parameter:</p> <p>&lt;number&gt; - SC phone number in the format defined by &lt;type&gt;  &lt;type&gt; - the type of number  129 - national numbering scheme  145 - international numbering scheme (contains the character "+")</p> <p>Note: to use the SM service, is mandatory to set a Service Center Address at which service requests will be directed.</p> <p>Note: in Text mode, this setting is used by send and write commands; in PDU mode, setting is used by the same commands, but only when the length of the SMSC address coded into the &lt;pdu&gt; parameter equals zero.</p> <p>Note: the current settings are stored through +CSAS</p> <p>Note: issuing AT+CSCA&lt;CR&gt; is the same as issuing the Read command.</p>	

<b>+CSCA - Service Center Address</b>		<b>SELINT 0 / 1</b>
<b>AT+CSCA?</b>	Note: issuing AT+CSCA=<CR> causes an <b>OK</b> result code to be issued.	
<b>AT+ CSCA=?</b>	Read command reports the current value of the SCA in the format:  +CSCA: <number>,<type>  Note: if SCA is not present the device reports an error message.	
<b>AT+ CSCA=?</b>	Test command returns the <b>OK</b> result code.	
Reference	GSM 27.005	

<b>+CSCA -Service Center Address</b>		<b>SELINT 2</b>
<b>AT+CSCA= &lt;number&gt; [,&lt;type&gt;]</b>	Set command sets the Service Center Address to be used for mobile originated SMS transmissions.  Parameter: <number> - SC phone number in the format defined by <type> <type> - the type of number 129 - national numbering scheme 145 - international numbering scheme (contains the character "+")  Note: to use the SM service, is mandatory to set a Service Center Address at which service requests will be directed.  Note: in Text mode, this setting is used by send and write commands; in PDU mode, setting is used by the same commands, but only when the length of the SMSC address coded into the <pdu> parameter equals zero.  Note: the current settings are stored through +CSAS	
<b>AT+CSCA?</b>	Read command reports the current value of the SCA in the format:  +CSCA: <number>,<type>	
<b>AT+ CSCA=?</b>	Note: if SCA is not present the device reports an error message.	
<b>AT+ CSCA=?</b>	Test command returns the <b>OK</b> result code.	
Reference	GSM 27.005	

### 3.5.5.2.2 Set Text Mode Parameters - +CSMP

<b>+CSMP - Set Text Mode Parameters</b>		<b>SELINT 0 / 1</b>
<b>AT+CSMP[= &lt;fo&gt; [,&lt;vp&gt; [,&lt;pid&gt; [,&lt;dcs&gt;]]]]]</b>	Set command is used to select values for additional parameters for storing and sending SMs when the text mode is used (+CMGF=1)  Parameters: <fo> - depending on the command or result code: first octet of 3GPP TS 23.040 SMS-DELIVER, SMS-SUBMIT (default 17), SMS-STATUS-REPORT, or SMS-COMMAND (default 2) in integer format. <vp> - depending on SMS-SUBMIT <fo> setting:	

<b>+CSMP - Set Text Mode Parameters</b>		<b>SELINT 0 / 1</b>
	<p>3GPP TS 23.040 TP-Validity-Period either in integer format (default 167) or in quoted time-string format</p> <p>&lt;pid&gt; - 3GPP TS 23.040 TP-Protocol-Identifier in integer format (default 0).</p> <p>&lt;dcs&gt; - depending on the command or result code:</p> <p style="margin-left: 2em;">3GPP TS 23.038 SMS Data Coding Scheme (default 0), or Cell Broadcast Data Coding Scheme</p> <p>Note: the current settings are stored through <b>+CSAS</b></p> <p>Note: issuing <b>AT+CSMP&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+CSMP=&lt;CR&gt;</b> is the same as issuing the command <b>AT+CSMP=0&lt;CR&gt;</b>.</p> <p>Note: &lt;vp&gt;, &lt;pid&gt; and &lt;dcs&gt; default values are loaded from first SIM <i>SMS Parameters</i> profile, if present. If it is not present, then the default values are those above indicated.</p>	
<b>AT+CSMP?</b>	Read command reports the current setting in the format:  <b>+CSMP: &lt;fo&gt;,&lt;vp&gt;,&lt;pid&gt;,&lt;dcs&gt;</b>	
<b>AT+CSMP=?</b>	Test command reports the supported range of values for <fo>, <vp>, <pid> and <dcs> parameters.	
Example	<p><i>Set the parameters for an outgoing message with 24 hours of validity period and default properties:</i></p> <p>AT+CSMP=17,167,0,0 OK</p>	
Reference	GSM 27.005; 3GPP TS 23.040; 3GPP TS 23.038	

<b>+CSMP - Set Text Mode Parameters</b>		<b>SELINT 2</b>
<p><i>Note: the behaviour of command +CPMS differs depending on whether or not the improved SMS commands operation mode has been enabled (see #SMSMODE)</i></p> <p style="text-align: center;"><b>(#SMSMODE=0)</b></p>		
# S M S M O D E = 0	<b>AT+CSMP=</b> [<fo> ,<vp> ,<pid> ,<dcs>]]]	<p>Set command is used to select values for additional parameters for storing and sending SMs when the text mode is used (<b>AT+CMGF=1</b>)</p> <p>Parameters:</p> <p>&lt;fo&gt; - first octet of 3GPP TS 23.040 SMS-SUBMIT in integer format (default 17, i.e. SMS-SUBMIT with validity period in relative format). As first octet of a PDU has the following bit field description (we'll refer to <b>bit[7]bit[6]bit[5]bit[4]bit[3]bit[2]bit[1]bit[0]</b>):</p> <p><b>bit[1]bit[0]</b>: Message Type Indicator, 2-bit field describing the message type: all the combinations are converted in [01] (default is [01]);</p>

+CSMP - Set Text Mode Parameters		SELINT 2
# S M S M O D E = 0  # S M S M O D E = 0  # S M S M O D E = 0  # S M S M O D E = 0  # S M S	<p>[00] - converted in [01]  [01] - SMS-SUBMIT  [10] - converted in [01]  [11] - converted in [01]</p> <p><b>bit[2]:</b> Reject Duplicates, 1-bit field: user is not responsible for setting this bit and, if any set, it will have no meaning (default is [0]);</p> <p><b>bit[4]bit[3]:</b> Validity Period Format, 2-bit field indicating whether or not the Validity Period field is present (default is [10]):</p> <ul style="list-style-type: none"> <li>[00] - Validity Period field <i>not present</i></li> <li>[01] - Validity Period field present in <i>enhanced format</i>: it is currently converted in [00], i.e. <i>not present</i></li> <li>[10] - Validity Period field present in <i>relative format</i>, (i.e. integer type, see below)</li> <li>[11] - Validity Period field present in <i>absolute format</i> (i.e. quoted time-string type); we strongly suggest to not use this format because its implementation is currently under refinement</li> </ul> <p><b>bit[5]:</b> Status Report Request, 1-bit field indicating the MS is requesting a status report (default is [0]);</p> <ul style="list-style-type: none"> <li>[0] - MS is not requesting a status report</li> <li>[1] - MS is requesting a status report</li> </ul> <p><b>bit[6]:</b> User Data Header Indicator, 1-bit field: user is not responsible for setting this bit and, if any set, it will have no meaning (default is [0]);</p> <p><b>bit[7]:</b> Reply Path, 1-bit field indicating the request for Reply Path (default is [0]);</p> <ul style="list-style-type: none"> <li>[0] - Reply Path not requested</li> <li>[1] - Reply Path requested</li> </ul> <p><b>&lt;vp&gt;</b> - depending on <b>&lt;fo&gt;</b> setting: if <b>&lt;fo&gt;</b> asks for a Validity Period in <i>relative format</i> <b>&lt;vp&gt;</b> shall be integer type (default 167, i.e. 24 hours); if <b>&lt;fo&gt;</b> asks for a Validity Period in <i>absolute format</i> we strongly suggest to modify it in <i>relative format</i>, because the implementation of this topic is currently under refinement and it is currently not possible to set <b>&lt;vp&gt;</b> with a quoted time string type.  (for <i>relative format</i> only):  0..143 - (<b>&lt;vp&gt;</b> + 1) x 5 minutes;  144..167 - 12 hours + ((<b>&lt;vp&gt;</b> - 143) x 30 minutes);  168..196 - (<b>&lt;vp&gt;</b> - 166) x 1 day;  197..255 - (<b>&lt;vp&gt;</b> - 192) x 1 week;</p> <p><b>&lt;pid&gt;</b> - 3GPP TS 23.040 TP-Protocol-Identifier in integer format (default 0).</p> <p><b>&lt;dcs&gt;</b> - depending on the command or result code: 3GPP TS 23.038 SMS Data Coding Scheme (default 0), or Cell Broadcast Data Coding Scheme</p> <p>Note: the current settings are stored through <u>+CSAS</u>  Note: <b>&lt;vp&gt;</b>, <b>&lt;pid&gt;</b> and <b>&lt;dcs&gt;</b> default values are loaded from first SIM <i>SMS</i></p>	

+CSMP - Set Text Mode Parameters		SELINT 2
M O  D E = 0		<i>Parameters</i> profile, if present. If it is not present, then the default values are those above indicated.
	<b>AT+CSMP?</b>	Read command reports the current setting in the format:  +CSMP: <fo>,<vp>,<pid>,<dcs>
	<b>AT+CSMP=?</b>	Test command returns the <b>OK</b> result code.
	Example	<i>Set the parameters for an outgoing message with 24 hours of validity period and default properties:</i>  AT+CSMP=17,167,0,0 OK

### 3.5.5.2.3. Show Text Mode Parameters - +CSDH

+CSDH - Show Text Mode Parameters		SELINT 0 / 1
AT+CSDH[= [<show>]]	<p>Set command controls whether detailed header information is shown in text mode (+CMGF=1) result codes.</p> <p>Parameter:  <b>&lt;show&gt;</b></p> <p>0 - do not show header values defined in commands +CSCA and +CSMP (&lt;sca&gt;, &lt;tosca&gt;, &lt;fo&gt;, &lt;vp&gt;, &lt;pid&gt; and &lt;dcs&gt;) nor &lt;length&gt;, &lt;toda&gt; or &lt;tooaa&gt; in +CMT, +CMGL, +CMGR result codes for SMS-DELIVERs and SMS-SUBMITs in text mode. For SMS-COMMANDs in +CMGR result code do not show &lt;pid&gt;, &lt;mn&gt;, &lt;da&gt;, &lt;toda&gt;, &lt;length&gt; or &lt;cdata&gt;          1 - show the values in result codes</p> <p>Note: issuing <b>AT+CSDH&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+CSDH=&lt;CR&gt;</b> is the same as issuing the command <b>AT+CSDH=0&lt;CR&gt;</b>.</p>	
AT+CSDH?	Read command reports the current setting in the format:	
	+CSDH: <show>	
AT+CSDH=?	Test command reports the supported range of values for parameter <show>	
Reference	GSM 27.005	

+CSDH - Show Text Mode Parameters		SELINT 2
AT+CSDH[= [<show>]]	<p>Set command controls whether detailed header information is shown in text mode (<b>AT+CMGF=1</b>) result codes.</p> <p>Parameter:  <b>&lt;show&gt;</b></p> <p>0 - do not show header values defined in commands +CSCA and +CSMP (&lt;sca&gt;, &lt;tosca&gt;, &lt;fo&gt;, &lt;vp&gt;, &lt;pid&gt; and &lt;dcs&gt;) nor &lt;length&gt;, &lt;toda&gt; or &lt;tooaa&gt; in +CMT, +CMGL, +CMGR result codes for SMS-DELIVERs and SMS-SUBMITs in text mode. For SMS-COMMANDs in +CMGR result code do not show &lt;pid&gt;, &lt;mn&gt;, &lt;da&gt;, &lt;toda&gt;, &lt;length&gt; or &lt;cdata&gt;          1 - show the values in result codes</p>	
AT+CSDH?	Read command reports the current setting in the format:	
	+CSDH: <show>	
AT+CSDH=?	Test command reports the supported range of values for parameter <show>	
Reference	GSM 27.005	

### 3.5.5.2.4. Select Cell Broadcast - +CSCB

<b>+CSCB -Select Cell Broadcast Message Types</b>		<b>SELINT 0 / 1</b>
AT+CSCB[= [<mode> [,<mids> [,<dcss>]]]]	<p>Set command selects which types of Cell Broadcast Messages are to be received by the device.</p> <p>Parameter:</p> <p>&lt;mode&gt;</p> <ul style="list-style-type: none"> <li>0 - the message types defined by &lt;mids&gt; and &lt;dcss&gt; are accepted (factory default)</li> <li>1 - the message types defined by &lt;mids&gt; and &lt;dcss&gt; are rejected</li> </ul> <p>&lt;mids&gt; - Message Identifiers, string type: all different possible combinations of the CBM message identifiers; default is empty string ("").</p> <p>&lt;dcss&gt; - Data Coding Schemes, string type: all different possible combinations of CBM data coding schemes; default is empty string ("").</p>	
	<p>Note: the current settings are stored through +CSAS</p> <p>Note: issuing <b>AT+CSCB&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT+CSCB=&lt;CR&gt;</b> is the same as issuing the command <b>AT+CSCB=0&lt;CR&gt;</b>.</p>	
AT+CSCB?	Read command reports the current value of parameters <mode>, <mids> and <dcss>.	
AT+CSCB=?	Test command returns the range of values for parameter <mode>.	
Example	<pre>AT+CSCB? +CSCB: 1,"",""  OK                               (all CBMs are accepted, none is rejected) AT+CSCB=0,"0,1,300-315,450","0-3" OK</pre>	
Reference	GSM 27.005, 3GPP TS 23.041, 3GPP TS 23.038.	

<b>+CSCB -Select Cell Broadcast Message Types</b>		<b>SELINT 2</b>
AT+CSCB== [<mode>[,<mids> [,<dcss>]]]]	<p>Set command selects which types of Cell Broadcast Messages are to be received by the device.</p> <p>Parameters:</p> <p>&lt;mode&gt;</p> <ul style="list-style-type: none"> <li>0 - the message types defined by &lt;mids&gt; and &lt;dcss&gt; are accepted (factory default)</li> <li>1 - the message types defined by &lt;mids&gt; and &lt;dcss&gt; are rejected</li> </ul> <p>&lt;mids&gt; - Message Identifiers, string type: all different possible combinations of the CBM message identifiers; default is empty string ("").</p> <p>&lt;dcss&gt; - Data Coding Schemes, string type: all different possible combinations of CBM data coding schemes; default is empty string ("").</p>	
	<p>Note: the current settings are stored through +CSAS</p>	
AT+CSCB?	Read command reports the current value of parameters <mode>, <mids> and	

+CSCB -Select Cell Broadcast Message Types		SELINT 2
	<desc>.	
AT+CSCB=?	Test command returns the range of values for parameter <mode>.	
Example	AT+CSCB? +CSCB: 1,"", ""  OK AT+CSCB=0,"0,1,300-315,450","0-3" OK	(all CBMs are accepted, none is rejected)
Reference	GSM 27.005, 3GPP TS 23.041, 3GPP TS 23.038.	

### 3.5.5.2.5. Save Settings - +CSAS

+CSAS - Save Settings		SELINT 0 / 1
AT+CSAS [=<profile>]	Execution command saves settings which have been made by the +CSCA, +CSMP and +CSCB commands in local non volatile memory.  Parameter: <b>&lt;profile&gt;</b> 0 - it saves the settings to NVM (factory default). 1..n - SIM profile number; the value of n depends on the SIM and its max is 3.  Note: certain settings may not be supported by the SIM and therefore they are always saved to NVM, regardless the value of <profile>.  Note: If parameter is omitted the settings are saved in the non volatile memory.  Note: +CSCB <mids> ( Message Identifiers ) parameter can be saved to SIM only if the “Cell broadcast message identifier selection” file is present on the SIM itself. This file, if present, has storage for only a single set of data. Therefore, it is not possible to save different <mids> in different SIM profiles; <mids> value, once changed and saved, will be the same for all SIM profiles.	
AT+CSAS?	Read command has the same effect as Execution command with parameter omitted.	
AT+CSAS=?	Test command returns the possible range of values for the parameter <profile>.	
Reference	GSM 27.005	

+CSAS - Save Settings		SELINT 2
AT+CSAS [=<profile>]	Execution command saves settings which have been made by the +CSCA, +CSMP and +CSCB commands in local non volatile memory.  Parameter: <b>&lt;profile&gt;</b> 0 - it saves the settings to NVM (factory default). 1..n - SIM profile number; the value of n depends on the SIM and its max is 3.  Note: certain settings may not be supported by the SIM and therefore they are always saved to NVM, regardless the value of <profile>.	

<b>+CSAS - Save Settings</b>		<b>SELINT 2</b>
Note: If parameter is omitted the settings are saved in the non volatile memory.		
Note: +CSCB <mids> ( Message Identifiers ) parameter can be saved to SIM only if the “Cell broadcast message identifier selection” file is present on the SIM itself. This file, if present, has storage for only a single set of data. Therefore, it is not possible to save different <mids> in different SIM profiles; <mids> value, once changed and saved, will be the same for all SIM profiles.		
<b>AT+CSAS=?</b>		Test command returns the possible range of values for the parameter <profile>.
Reference		GSM 27.005

### 3.5.5.2.6. Restore Settings - +CRES

<b>+CRES - Restore Settings</b>		<b>SELINT 0 / 1</b>
<b>AT+CRES</b> [=<profile>]	Execution command restores message service settings saved by +CSCA command from either NVM or SIM.  Parameter: <b>&lt;profile&gt;</b> 0 - it restores message service settings from NVM. 1..n - it restores message service settings from SIM. The value of n depends on the SIM and its max is 3.  Note: certain settings may not be supported by the SIM and therefore they are always restored from NVM, regardless the value of <profile>.  Note: If parameter is omitted the command restores message service settings from NVM.	
<b>AT+CRES?</b>	Read command has the same effect as Execution command with parameter omitted.	
<b>AT+CRES=?</b>	Test command returns the possible range of values for the parameter <profile>.	
Reference	GSM 27.005	

<b>+CRES - Restore Settings</b>		<b>SELINT 2</b>
<b>AT+CRES</b> [=<profile>]	Execution command restores message service settings saved by +CSAS command from either NVM or SIM.  Parameter: <b>&lt;profile&gt;</b> 0 - it restores message service settings from NVM. 1..n - it restores message service settings from SIM. The value of n depends on the SIM and its max is 3.  Note: certain settings may not be supported by the SIM and therefore they are always restored from NVM, regardless the value of <profile>.  Note: If parameter is omitted the command restores message service settings from	

+CRES - Restore Settings		SELINT 2
	NVM.	
AT+CRES=?	Test command returns the possible range of values for the parameter <profile>.	
Reference	GSM 27.005	

### **3.5.5.3. Message Receiving And Reading**

### **3.5.5.3.1. New Message Indications - +CNMI**

+CNMI - New Message Indications To Terminal Equipment		SELINT 0 / 1
AT+CNMI[=[ <mode>[,<mt> [,<bm>[,<ds> [,<bfr>]]]]]	<p>Set command selects the behaviour of the device on how the receiving of new messages from the network is indicated to the <b>DTE</b>.</p> <p>Parameter:</p> <ul style="list-style-type: none"> <li>&lt;mode&gt; - unsolicited result codes buffering option</li> </ul> <p>0 - Buffer unsolicited result codes in the <b>TA</b>. If <b>TA</b> result code buffer is full, indications can be buffered in some other place or the oldest indications may be discarded and replaced with the new received indications.</p> <p>1 - Discard indication and reject new received message unsolicited result codes when <b>TA-TE</b> link is reserved, otherwise forward them directly to the <b>TE</b>.</p> <p>2 - Buffer unsolicited result codes in the <b>TA</b> in case the <b>DTE</b> is busy and flush them to the <b>TE</b> after reservation. Otherwise forward them directly to the <b>TE</b>.</p> <p>3 - if &lt;mt&gt; is set to 1 an indication via 100 ms break is issued when a SMS is received while the module is in GPRS online mode. <b>@CMGR - Read Message Improved</b>	<b>SELINT 0</b>
--------------------------------------	-----------------

**<stat>** - status of the message  
 0 - new message  
 1 - read message  
 2 - stored message not yet sent  
 3 - stored message already sent  
**<length>** - length of the PDU in bytes.  
**<pdu>** - message in PDU format according to GSM 3.40.

The status of the message and entire message data unit **<pdu>** is returned.

**(Text Mode)**

Output format for received messages (the information written in italics will be present depending on **+CSDH** last setting):

**@CMGR: <stat>,<oa>,,<scts> [,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>]<CR><LF><text>**

Output format for either sent or unsent messages:

**@CMGR: <stat>,<da>[,<toda>,<fo>,<pid>,<dcs>,,<sca>,<tosca>,<length>]<CR><LF><text>**

Output format for message delivery confirm:

**@CMGR: <stat>,<fo>,<mr>,,<scts>,<dt>,<st>**

where:

**<stat>** - status of the message  
 "REC UNREAD" - new received message unread  
 "REC READ" - received message read  
 "STO UNSENT" - message stored not yet sent  
 "STO SENT" - message stored already sent  
**<fo>** - first octet of the message PDU  
**<mr>** - message reference number  
**<scts>** - arrival time of the message to the SC  
**<dt>** - sending time of the message  
**<st>** - message status as coded in the PDU  
**<pid>** - Protocol Identifier  
**<dcs>** - Data Coding Scheme  
**<oa>** - Originator address, string type represented in the currently selected character set (see **+CSCS**)  
**<da>** - Destination address, string type represented in the currently selected character set (see **+CSCS**)  
**<sca>** - Service Centre number  
**<tooa>,<toda>,<tosca>** - type of number **<oa>,<da>,<sca>**  
 129 - number in national format  
 145 - number in international format (contains the "+")  
**<length>** - text length

+CMGD - Delete Message		SELINT 2
(#SMSMODE=1)		
# S M S M O D E = 1  # S M S M O D E = 1	<b>AT+CMGD=</b> <index> [,<delflag>]	<p>Execution command deletes from memory &lt;memr&gt; the message(s).</p> <p>Parameter:</p> <p>&lt;index&gt; - message index in the selected storage &lt;memr&gt; that can have values form 1 to N, where N depends on the available space (see +CPMS)</p> <p>&lt;delflag&gt; - an integer indicating multiple message deletion request.</p> <ul style="list-style-type: none"> <li>0 (or omitted) - delete message specified in &lt;index&gt;</li> <li>1 - delete all read messages from &lt;memr&gt; storage, leaving unread messages and stored mobile originated messages (whether sent or not) untouched</li> <li>2 - delete all read messages from &lt;memr&gt; storage and sent mobile originated messages, leaving unread messages and unsent mobile originated messages untouched</li> <li>3 - delete all read messages from &lt;memr&gt; storage, sent and unsent mobile originated messages, leaving unread messages untouched</li> <li>4 - delete all messages from &lt;memr&gt; storage.</li> </ul> <p>Note: if &lt;delflag&gt; is present and not set to 0 then, if &lt;index&gt; is greater than 0, &lt;index&gt; is ignored and ME shall follow the rules for &lt;delflag&gt; shown above.</p>
	<b>AT+CMGD=?</b>	<p>Test command shows the valid memory locations and optionally the supported values of &lt;delflag&gt;.</p> <p><b>+CMGD: (supported &lt;index&gt;s list)[,(supported &lt;delflag&gt;s list)]</b></p>
	Example	AT+CMGD=? +CMGD: (1,2,3,6,7,17,18,19,20,37,38,39,47),(0-4)  OK
	Reference	GSM 27.005

### 3.5.5.4.5. Select service for MO SMS messages - +CGSMS

+CGSMS – Select service for MO SMS messages		SELINT 2
AT+CGSMS=	<p>The set command is used to specify the service or service preference that the MT will use to send MO SMS messages.</p> <p>&lt;service&gt;: a numeric parameter which indicates the service or service preference to be used</p> <ul style="list-style-type: none"> <li>0 - GPRS</li> <li>1 - circuit switched (default)</li> <li>2 - GPRS preferred (use circuit switched if SMS via GPRS service not available or GPRS not registered)</li> </ul>	

<b>+CGSMS – Select service for MO SMS messages</b>		<b>SELINT 2</b>
	3 - circuit switched preferred (use GPRS if SMS via GSM service not available or GSM not registered)  Note: the <service> value is saved on NVM as global parameter	
<b>AT+CGSMS?</b>	The read command returns the currently selected service or service preference in the form:  <b>+CGSMS: &lt;service&gt;</b>	
<b>AT+CGSMS=?</b>	Test command reports the supported list of currently available <service>s.	

### 3.5.6. FAX Class 1 AT Commands

#### 3.5.6.1. General Configuration

##### 3.5.6.1.1. Manufacturer ID - +FMI

+FMI - Manufacturer ID		SELINT 0
AT+FMI?	Read command reports the manufacturer ID. The output depends on the choice made through #SELINT command.	
Example	AT+FMI? Telit_Mobile_Terminals OK	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

+FMI - Manufacturer ID		SELINT 1 / 2
AT+FMI?	Read command reports the manufacturer ID. The output depends on the choice made through #SELINT command.	
Example	AT+FMI? Telit OK	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

##### 3.5.6.1.2. Model ID - +FMM

+FMM - Model ID		SELINT 0 / 1 / 2
AT+FMM?	Read command reports the model ID	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

##### 3.5.6.1.3. Revision ID - +FMR

+FMR - Revision ID		SELINT 0 / 1 / 2
AT+FMR?	Read command reports the software revision ID	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.2. Transmission/Reception Control

#### 3.5.6.2.1. Stop Transmission And Pause - +FTS

+FTS - Stop Transmission And Pause		SELINT 0 / 1 / 2
AT+FTS=<time>	Execution command causes the modem to terminate a transmission and wait for <time> 10ms intervals before responding with <b>OK</b> result.  Parameter: <time> - duration of the pause, expressed in 10ms intervals. 0..255	
AT+FTS=?	Test command returns all supported values of the parameter <time>.  Note: test command result is without command echo	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

#### 3.5.6.2.2. Wait For Receive Silence - +FRS

+FRS - Wait For Receive Silence		SELINT 0 / 1 / 2
AT+FRS=<time>	Execution command causes the modem to listen and report <b>OK</b> when silence has been detected for the specified period of time. This command will terminate when the required silence period is detected or when the <b>DTE</b> sends another character other than <b>XON</b> or <b>XOFF</b> .  Parameter: <time> - amount of time, expressed in 10ms intervals. 0..255	
AT+FRS=?	Test command returns all supported values of the parameter <time>.  Note: test command result is without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.2.3. Transmit Data Modulation - +FTM

+FTM - Transmit Data Modulation		SELINT 0 / 1
AT+FTM=<mod>	<p>Execution command causes the module to transmit facsimile data using the modulation defined by the parameter &lt;mod&gt;.</p> <p>Parameter:          &lt;mod&gt; - carrier modulation          24 - V27ter/2400 bps          48 - V27ter/4800 bps          72 - V29/7200 bps          96 - V29/9600 bps       </p>	
AT+FTM=?	<p>Test command returns all supported values of the parameter &lt;mod&gt;.</p> <p>Note: the output is not bracketed and without command echo.</p>	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

+FTM - Transmit Data		SELINT 2
AT+FTM=<mod>	<p>Execution command causes the module to transmit facsimile data using the modulation defined by the parameter &lt;mod&gt;.</p> <p>Parameter:          &lt;mod&gt; - carrier modulation          24 - V27ter/2400 bps          48 - V27ter/4800 bps          72 - V29/7200 bps          96 - V29/9600 bps       </p>	
AT+FTM=?	<p>Test command returns all supported values of the parameter &lt;mod&gt;.</p> <p>Note: test command result is without command echo.</p>	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.2.4. Receive Data Modulation - +FRM

<b>+FRM - Receive Data Modulation</b>		<b>SELINT 0 / 1</b>
<b>AT+FRM=&lt;mod&gt;</b>	Execution command causes the module to receive facsimile data using the modulation defined by the parameter <mod>.	
	<p>Parameter:</p> <p>&lt;mod&gt; - carrier modulation</p> <p>24 - V27ter/2400 bps</p> <p>48 - V27ter/4800 bps</p> <p>72 - V29/7200 bps</p> <p>96 - V29/9600 bps</p>	
<b>AT+FRM=?</b>	Test command returns all supported values of the parameter <mod>.	
	<p>Note: the output is not bracketed and without command echo.</p>	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

<b>+FRM - Receive Data Modulation</b>		<b>SELINT 2</b>
<b>AT+FRM=&lt;mod&gt;</b>	Execution command causes the module to receive facsimile data using the modulation defined by the parameter <mod>.	
	<p>Parameter:</p> <p>&lt;mod&gt; - carrier modulation</p> <p>24 - V27ter/2400 bps</p> <p>48 - V27ter/4800 bps</p> <p>72 - V29/7200 bps</p> <p>96 - V29/9600 bps</p>	
<b>AT+FRM=?</b>	Test command returns all supported values of the parameter <mod>.	
	<p>Note: test command result is without command echo.</p>	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.2.5. Transmit Data With HDLC Framing - +FTH

<b>+FTH - Transmit Data With HDLC Framing</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+FTH=&lt;mod&gt;</b>	Execution command causes the module to transmit facsimile data using HDLC protocol and the modulation defined by the parameter <mod>.	
	<p>Parameter:</p> <p>&lt;mod&gt; - carrier modulation</p> <p>3 - V21/300 bps</p>	
<b>AT+FTH=?</b>	Test command returns all supported values of the parameter <mod>.	
	<p>Note: test command result is without command echo.</p>	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.2.6. Receive Data With HDLC Framing - +FRH

+FRH - Receive Data With HDLC Framing		SELINT 0 / 1 / 2
<b>AT+FRH=&lt;mod&gt;</b>	Execution command causes the module to receive facsimile data using HDLC protocol and the modulation defined by the parameter <mod>.	
	Parameter: <mod> - carrier modulation 3 - V21/300 bps	
<b>AT+FRH=?</b>	Test command returns all supported values of the parameter <mod>.  Note: test command result is without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.3. Serial Port Control

#### 3.5.6.3.1. Select Flow Control - +FLO

+FLO - Select Flow Control Specified By Type		SELINT 0 / 1 / 2
<b>AT+FLO=&lt;type&gt;</b>	Set command selects the flow control behaviour of the serial port in both directions: from <b>DTE</b> to <b>DTA</b> and from <b>DTA</b> to <b>DTE</b> .  Parameter: <type> - flow control option for the data on the serial port 0 - flow control None 1 - flow control Software ( <b>XON-XOFF</b> ) 2 - flow control Hardware ( <b>CTS-RTS</b> ) – (factory default)  Note: This command is a shortcut of the <b>+IFC</b> command. Note: <b>+FLO</b> 's settings are functionally a subset of <b>&amp;K</b> 's ones.	
<b>AT+FLO?</b>	Read command returns the current value of parameter <type>  Note: If flow control behavior has been set with <b>AT&amp;Kn</b> command with the parameter that is not allowed by <b>AT+FLO</b> the read command <b>AT+FLO?</b> will return:  <b>+FLO: 0</b>	
<b>AT+FLO=?</b>	Test command returns all supported values of the parameter <type>.  Note: test command result is without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.3.2. Serial Port Rate - +FPR

<b>+FPR - Select Serial Port Rate</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+FPR=&lt;rate&gt;</b>	Set command selects the the serial port speed in both directions, from <b>DTE</b> to <b>DTA</b> and from <b>DTA</b> to <b>DTE</b> . When autobauding is selected, then the speed is detected automatically.	
	Parameter: < <b>rate</b> > - serial port speed selection 0 – autobauding	
	Note: it has no effect and is included only for backward compatibility with landline modems	
<b>AT+FPR?</b>	Read command returns the current value of parameter < <b>rate</b> >	
<b>AT+FPR=?</b>	Test command returns all supported values of the parameters < <b>rate</b> >.  Note: test command result is without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.3.3. Double Escape Character Replacement - +FDD

<b>+FDD - Double Escape Character Replacement Control</b>		<b>SELINT 0 / 1 / 2</b>
<b>AT+FDD=&lt;mode&gt;</b>	Set command concerns the use of the < <b>DLE</b> >< <b>SUB</b> > pair to encode consecutive escape characters (< <b>10h</b> >< <b>10h</b> >) in user data.	
	Parameter <b>&lt;mode&gt;</b> 0 - currently the only available value. The <b>DCE</b> decode of < <b>DLE</b> >< <b>SUB</b> > is either < <b>DLE</b> >< <b>DLE</b> > or discard. The <b>DCE</b> encode of < <b>10h</b> >< <b>10h</b> > is < <b>DLE</b> >< <b>DLE</b> >< <b>DLE</b> >< <b>DLE</b> >	
<b>AT+FDD?</b>	Read command returns the current value of parameter < <b>mode</b> >	
<b>AT+FDD=?</b>	Test command returns all supported values of parameter < <b>mode</b> >.  Note: test command result is without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.7. Custom AT Commands

#### 3.5.7.1. General Configuration AT Commands

##### 3.5.7.1.1. Network Selection Menu Availability - +PACSP

+PACSP - Network Selection Menu Availability		SELINT 2
AT+PACSP?	Read command returns the current value of the <mode> parameter in the format:  +PACSP<mode>  where: <mode> - PLMN mode bit (in CSP file on the SIM) 0 - restriction of menu option for manual PLMN selection. 1 - no restriction of menu option for Manual PLMN selection.	
AT+PACSP=?	Test command returns the <b>OK</b> result code.	
Note	The command is available only if the ENS functionality has been previously enabled (see #ENS)	

##### 3.5.7.1.2. Manufacturer Identification - #CGMI

#CGMI - Manufacturer Identification		SELINT 0 / 1
AT#CGMI	Execution command returns the device manufacturer identification code with command echo. The output depends on the choice made through #SELINT command.	
AT#CGMI?	Read command has the same effect as the Execution command	

#CGMI - Manufacturer Identification		SELINT 2
AT#CGMI	Execution command returns the device manufacturer identification code with command echo. The output depends on the choice made through #SELINT command.	
AT#CGMI=?	Test command returns the <b>OK</b> result code.	

##### 3.5.7.1.3. Model Identification - #CGMM

#CGMM - Model Identification		SELINT 0 / 1
AT#CGMM	Execution command returns the device model identification code with command echo.	
AT#CGMM?	Read command has the same effect as the Execution command	

#CGMM - Model Identification		SELINT 2
AT#CGMM	Execution command returns the device model identification code with command echo.	
AT#CGMM=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.1.4. Revision Identification - #CGMR

#CGMR - Revision Identification		SELINT 0 / 1
AT#CGMR	Execution command returns device software revision number with command echo.	
AT#CGMR?	Read command has the same effect as the Execution command	

#CGMR - Revision Identification		SELINT 2
AT#CGMR	Execution command returns device software revision number with command echo.	
AT#CGMR=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.1.5. Product Serial Number Identification - #CGSN

#CGSN - Product Serial Number Identification		SELINT 0 / 1
AT#CGSN	Execution command returns the product serial number, identified as the IMEI of the mobile, with command echo.	
AT#CGSN?	Read command has the same effect as the Execution command	

#CGSN - Product Serial Number Identification		SELINT 2
AT#CGSN	Execution command returns the product serial number, identified as the IMEI of the mobile, with command echo.	
AT#CGSN=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.1.6. International Mobile Subscriber Identity (IMSI) - #CIMI

#CIMI - International Mobile Subscriber Identity (IMSI)		SELINT 0 / 1
AT#CIMI	Execution command returns the international mobile subscriber identity, identified as the IMSI number, with command echo.	
AT#CIMI?	Read command has the same effect as the Execution command	

#CIMI - International Mobile Subscriber Identity (IMSI)		SELINT 2
AT#CIMI	Execution command returns the international mobile subscriber identity, identified as the IMSI number, with command echo.	
AT#CIMI=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.1.7. Read ICCID (Integrated Circuit Card Identification) - #CCID

#CCID - Read ICCID		SELINT 2
AT#CCID	Execution command reads on SIM the ICCID (card identification number that provides a unique identification number for the SIM)	
AT#CCID=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.1.8. Service Provider Name - #SPN

#SPN - Service Provider Name		SELINT 2
AT#SPN	<p>Execution command returns the service provider string contained in the SIM field <b>SPN</b>, in the format:</p> <p><b>#SPN: &lt;spn&gt;</b></p> <p>where:  <b>&lt;spn&gt;</b> - service provider string contained in the SIM field <b>SPN</b>, represented in the currently selected character set (see <a href="#">+CSCS</a>).  Note: if the SIM field SPN is empty, the command returns just the <b>OK</b> result code.  Note: if the SIM field SPN is not available in the SIM card, the command returns just the <b>ERROR</b> result code.</p>	
AT#SPN=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.1.9. Extended Numeric Error report - #CEER

#CEER – Extended numeric error report		SELINT 2																				
AT#CEER	<p>Execution command causes the TA to return a numeric code in the format</p> <p><b>#CEER: &lt;code&gt;</b></p> <p>which should offer the user of the TA a report of the reason for</p> <ul style="list-style-type: none"> <li>the failure in the last unsuccessful call setup (originating or answering);</li> <li>the last call release;</li> <li>the last unsuccessful GPRS attach or unsuccessful PDP context activation;</li> <li>the last GPRS detach or PDP context deactivation.</li> </ul> <p>Note: if none of the previous conditions has occurred since power up then <b>0</b> is reported (i.e. <b>No error</b>, see below)</p> <p><b>&lt;code&gt;</b> values as follows</p> <table border="1"> <thead> <tr> <th>Value</th><th>Diagnostic</th></tr> </thead> <tbody> <tr> <td>0</td><td>No error</td></tr> <tr> <td>1</td><td>Unassigned (unallocated) number</td></tr> <tr> <td>3</td><td>No route to destination</td></tr> <tr> <td>6</td><td>Channel unacceptable</td></tr> <tr> <td>8</td><td>Operator determined barring</td></tr> <tr> <td>16</td><td>Normal call clearing</td></tr> <tr> <td>17</td><td>User busy</td></tr> <tr> <td>18</td><td>No user responding</td></tr> <tr> <td>19</td><td>User alerting, no answer</td></tr> </tbody> </table>	Value	Diagnostic	0	No error	1	Unassigned (unallocated) number	3	No route to destination	6	Channel unacceptable	8	Operator determined barring	16	Normal call clearing	17	User busy	18	No user responding	19	User alerting, no answer	
Value	Diagnostic																					
0	No error																					
1	Unassigned (unallocated) number																					
3	No route to destination																					
6	Channel unacceptable																					
8	Operator determined barring																					
16	Normal call clearing																					
17	User busy																					
18	No user responding																					
19	User alerting, no answer																					

#CEER – Extended numeric error report		SELINT 2
21	Call rejected	
22	Number changed	
26	Non selected user clearing	
27	Destination out of order	
28	Invalid number format (incomplete number)	
29	Facility rejected	
30	Response to STATUS ENQUIRY	
31	Normal, unspecified	
34	No circuit/channel available	
38	Network out of order	
41	Temporary failure	
42	Switching equipment congestion	
43	Access information discarded	
44	Requested circuit/channel not available	
47	Resources unavailable, unspecified	
49	Quality of service unavailable	
50	Requested facility not subscribed	
55	Incoming calls barred with in the CUG	
57	Bearer capability not authorized	
58	Bearer capability not presently available	
63	Service or option not available, unspecified	
65	Bearer service not implemented	
68	ACM equal to or greater than ACMmax	
69	Requested facility not implemented	
70	Only restricted digital information bearer capability is available	
79	Service or option not implemented, unspecified	
81	Invalid transaction identifier value	
87	User not member of CUG	
88	Incompatible destination	
91	Invalid transit network selection	
95	Semantically incorrect message	
96	Invalid mandatory information	
97	Message type non-existent or not implemented	
98	Message type not compatible with protocol state	
99	Information element non-existent or not implemented	
100	Conditional IE error	
101	Message not compatible with protocol state	
102	Recovery on timer expiry	
111	Protocol error, unspecified	
127	Interworking, unspecified	
<b><i>GPRS related errors</i></b>		
224	MS requested detach	
225	NWK requested detach	
226	Unsuccessful attach cause NO SERVICE	

#CEER – Extended numeric error report		SELINT 2
	227	Unsuccessful attach cause NO ACCESS
	228	Unsuccessful attach cause GPRS SERVICE REFUSED
	229	PDP deactivation requested by NWK
	230	PDP deactivation cause LLC link activation Failed
	231	PDP deactivation cause NWK reactivation with same TI
	232	PDP deactivation cause GMM abort
	233	PDP deactivation cause LLC or SNDCP failure
	234	PDP unsuccessful activation cause GMM error
	235	PDP unsuccessful activation cause NWK reject
	236	PDP unsuccessful activation cause NO NSAPI available
	237	PDP unsuccessful activation cause SM refuse
	238	PDP unsuccessful activation cause MMI ignore
	239	PDP unsuccessful activation cause Nb Max Session Reach
	256	PDP unsuccessful activation cause wrong APN
	257	PDP unsuccessful activation cause unknown PDP address or type
	258	PDP unsuccessful activation cause service not supported
	259	PDP unsuccessful activation cause QOS not accepted
	260	PDP unsuccessful activation cause socket error
	<i>Other custom values</i>	
	240	FDN is active and number is not in FDN
	241	Call operation not allowed
	252	Call barring on outgoing calls
	253	Call barring on incoming calls
	254	Call impossible
	255	Lower layer failure
AT#CEER=?	Test command returns <b>OK</b> result code.	
Reference	GSM 04.08	

### 3.5.7.1.10. Extended error report for Network Reject cause - #CEERNET

#CEERNET – Ext error report for Network reject cause		SELINT 2						
AT#CEERNET	<p>Execution command causes the TA to return a numeric code in the format</p> <p><b>#CEERNET: &lt;code&gt;</b></p> <p>which should offer the user of the TA a report for the last mobility management(MM) or session management(SM) procedure not accepted by the network and a report of detach or deactivation causes from network.</p> <p>&lt;code&gt; values as follows</p> <table border="1"> <thead> <tr> <th>Value</th><th>Diagnostic</th></tr> </thead> <tbody> <tr> <td>2</td><td>IMSI UNKNOWN IN HLR</td></tr> <tr> <td>3</td><td>ILLEGAL MS</td></tr> </tbody> </table>	Value	Diagnostic	2	IMSI UNKNOWN IN HLR	3	ILLEGAL MS	
Value	Diagnostic							
2	IMSI UNKNOWN IN HLR							
3	ILLEGAL MS							

#CEERNET – Ext error report for Network reject cause		SELINT 2
	4	IMSI UNKNOWN IN VISITOR LR
	5	IMEI NOT ACCEPTED
	6	ILLEGAL ME
	7	GPRS NOT ALLOWED
	8	GPRS AND NON GPRS NOT ALLOWED
	9	MS IDENTITY CANNOT BE DERIVED BY NETWORK

	99	IE NON_EXISTENT OR NOT IMPLEMENTED
	100	CONDITIONAL IE ERROR
	101	MSG NOT COMPATIBLE WITH PROTOCOL STATE
	111	PROTOCOL ERROR UNSPECIFIED
Note: causes 15, 41 to 46 are not considered for R98 products(GSM 04.08).		
AT#CEERNET=?	Test command returns <b>OK</b> result code.	
Reference	GSM 24.008 for REL4 and GSM 04.08 for R98	

### 3.5.7.1.11. Select Registration Operation Mode - #REGMODE

#REGMODE – Select Registration Operation Mode		SELINT 2
AT#REGMODE= <mode>	<p>There are situations in which the presentation of the URCs controlled by either +CREG and +CGREG are slightly different from ETSI specifications. We identified this behaviour and decided to maintain it as default for backward compatibility issues, while we're offering a more formal '<b>Enhanced Operation Mode</b>' through #REGMODE.</p> <p>Set command sets the operation mode of registration status commands.</p> <p>Parameter:</p> <p>&lt;mode&gt; - operation mode of registration status commands</p> <p>0 - basic operation mode (default for all products, except GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>1 - enhanced operation mode (default for GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p>	
AT#REGMODE?	Read command returns the current registration operation mode.	
AT#REGMODE=?	Test command reports the available range of values for parameter <mode>	
Note	The affected commands are +CREG and +CGREG	

### 3.5.7.1.12. SMS Commands Operation Mode - #SMSMODE

#SMSMODE - SMS Commands Operation Mode		SELINT 2
AT#SMSMODE= <mode>	<p>Set command enables/disables the improved SMS commands operation mode</p> <p>Parameter:</p> <p>&lt;mode&gt; - SMS commands operation mode</p> <p>0 - disable improved SMS commands operation mode (default for all products, except GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>1 - enable improved SMS commands operation mode (default for GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>2 - when FDN are enabled, check for presence of SMS service centre address in the FDN phonebook; if not present, SMS cannot be sent</p>	

#SMSMODE - SMS Commands Operation Mode		SELINT 2
AT#SMSMODE?	Read command reports whether the improved SMS commands operation mode is enabled or not, in the format:  #SMSMODE: <mode> (<mode> described above)	
AT#SMSMODE=?	Test command reports the supported range of values for parameter <mode>	
Note	The SMS commands affected by #SMSMODE are: +CPMS, +CNMI, +CMGS, +CMGW, +CMGL, +CMGR, +CMGD, +CSMP	

### 3.5.7.1.13. PLMN List Selection - #PLMNMODE

#PLMNMODE - PLMN List Selection		SELINT 0 / 1 / 2
AT#PLMNMODE= [<plmnlist>]	Set command selects the list of PLMN names to be used currently  Parameter: <plmnlist> - list of PLMN names 0 - PLMN names list, currently used in commands like +COPS or #MONI, is fixed and depends upon currently selected interface (see #SELINT) (default for all products, except GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS) 1 - PLMN names list is not fixed and can be updated in newer software versions (default for GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS)	
AT#PLMNMODE?	Read command reports whether the currently used list of PLMN names is fixed or not, in the format:  #PLMNMODE: <plmnlist> (<plmnlist> described above)	
AT#PLMNMODE=?	Test command returns the supported range of values for parameter <plmnlist>.	

### 3.5.7.1.14. Display PIN Counter - #PCT

#PCT - Display PIN Counter		SELINT 0 / 1
AT#PCT	Execution command reports the PIN/PUK or PIN2/PUK2 input remaining attempts, depending on +CPIN requested password in the format:  #PCT: <n> where: <n> - remaining attempts	

#PCT - Display PIN Counter	SELINT 0 / 1
	0 - the SIM is blocked. 1..3 - if the device is waiting either SIM PIN or SIM PIN2 to be given. 1..10 - if the device is waiting either SIM PUK or SIM PUK2 to be given.
AT#PCT?	Read command has the same behaviour as Execution command.

#PCT - Display PIN Counter	SELINT 2
AT#PCT	Execution command reports the PIN/PUK or PIN2/PUK2 input remaining attempts, depending on +CPIN requested password in the format:  <b>#PCT: &lt;n&gt;</b>  where: <n> - remaining attempts 0 - the SIM is blocked. 1..3 - if the device is waiting either SIM PIN or SIM PIN2 to be given. 1..10 - if the device is waiting either SIM PUK or SIM PUK2 to be given.
AT#PCT=?	Test command returns the OK result code.

### 3.5.7.1.15. Software Shut Down - #SHDN

#SHDN - Software Shutdown	SELINT 0 / 1
AT#SHDN	Execution command causes device detach from the network and shut down. Before definitive shut down an <b>OK</b> response is returned.  Note: after the issuing of this command any previous activity is terminated and the device will not respond to any further command.  Note: to turn it on again Hardware pin ON/OFF must be tied <b>low</b> .
AT#SHDN?	Read command has the same behaviour as Execution command.

#SHDN - Software Shutdown	SELINT 2
AT#SHDN	Execution command causes device detach from the network and shut down. Before definitive shut down an <b>OK</b> response is returned.  Note: after the issuing of this command any previous activity is terminated and the device will not respond to any further command.  Note: to turn it on again Hardware pin ON/OFF must be tied <b>low</b> .
AT#SHDN=?	Test command returns the OK result code.

### 3.5.7.1.16. Extended Reset - #Z

#Z – Extended reset	SELINT 2
AT#Z=<profile>	Set command loads both base section and extended section of the specified user profile stored with AT&W and selected with AT&P.

#Z – Extended reset	SELINT 2
	Parameter <b>&lt;profile&gt;</b> 0 – user profile 0 1 – user profile 1
AT#Z=?	Test command tests for command existence.

### 3.5.7.1.17. Periodic Reset - #ENHRST

#ENHRST – Periodic ReSeT	SELINT 2
AT#ENHRST=<mod>[,<delay>]	<p>Set command enables/disables the unit reset after &lt;delay&gt; minutes.</p> <p>Parameters:</p> <p><b>&lt;mod&gt;</b></p> <ul style="list-style-type: none"> <li>0 – disables the unit reset (factory default)</li> <li>1 – enables the unit reset only for one time</li> <li>2 – enables the periodic unit reset</li> </ul> <p><b>&lt;delay&gt;</b> - time interval after that the unit reboots; numeric value in minutes</p> <p>Note: the settings are saved automatically in NVM only if old or new mod is 2. Any change from 0 to 1 or from 1 to 0 is not stored in NVM</p> <p>Note: the particular case AT#ENHRST=1,0 causes the immediate module reboot. In this case if AT#ENHRST=1,0 follows an AT command that stores some parameters in NVM, it is recommended to insert a delay of at least 5 seconds before to issue AT#ENHRST=1,0, to permit the complete NVM storing.</p>
AT#ENHRST?	<p>Read command reports the current parameter settings for # ENHRST command in the format:</p> <p><b># ENHRST: &lt; mod &gt;[,&lt;delay&gt;,&lt;remainTime&gt;]</b></p> <p><b>&lt;remainTime&gt;</b> - time remaining before next reset</p>
AT#ENHRST=?	<p>Test command reports supported range of values for parameters &lt;mod&gt; and &lt;delay&gt;.</p>
Examples	<p>AT#ENHRST=1,60</p> <p>.... Module reboots after 60 minutes ...</p>

#ENHRST – Periodic ReSeT	SELINT 2
	<p>AT#ENHRST=1,0</p> <p>.... Module reboots now ...</p> <p>AT#ENHRST=2,60</p> <p>.... Module reboots after 60 minutes and indefinitely after every following power on ...</p>

### 3.5.7.1.18. Wake From Alarm Mode - #WAKE

#WAKE - Wake From Alarm Mode	SELINT 0 / 1
<p><b>AT#WAKE[= &lt;opmode&gt;]</b></p> <p>Execution command stops any eventually present alarm activity and, if the module is in <b>alarm mode</b>, it exits the <b>alarm mode</b> and enters the <b>normal operating mode</b>.</p> <p>Parameter:</p> <p>&lt;opmode&gt; - operating mode; any input is possible: no control is made on the &lt;opmode&gt; value, although it is mandatory to have it; the module exits the <b>alarm mode</b>, enters the <b>normal operating mode</b>, any alarm activity is stopped (e.g. alarm tone playing) and an <b>OK</b> result code is returned.</p> <p>Note: if parameter is omitted, the command returns the <b>operating status</b> of the device in the format:</p> <p><b>#WAKE: &lt;status&gt;</b></p> <p>where:</p> <p>&lt;status&gt;</p> <p>0 - normal operating mode</p> <p>1 - alarm mode or normal operating mode with some alarm activity.</p> <p>Note: the <b>alarm mode</b> is indicated by status <b>ON</b> of hardware pin <b>CTS</b> and by status <b>ON</b> of pin <b>DSR</b>, the <b>power saving</b> status is indicated by a <b>CTS - OFF</b> and <b>DSR - OFF</b> status; the <b>normal operating status</b> is indicated by <b>DSR - ON</b>.</p> <p>Note: during the <b>alarm mode</b> the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SM, the only commands that can be issued to the MODULE in this state are the <b>#WAKE</b> and <b>#SHDN</b>, every other command must not be issued during this state.</p>	

#WAKE - Wake From Alarm Mode		SELINT 0 / 1
	Note: if #WAKE=0 command is issued after an alarm has been set with +CALA command, but before the alarm has expired, it will answer <b>OK</b> but have no effect.	
AT#WAKE?	Read command has the same effect as Execution command when parameter is omitted.	
AT#WAKE=?	Test command returns <b>OK</b> result code.	

#WAKE - Wake From Alarm Mode		SELINT 2
AT#WAKE= <opmode>	<p>Execution command stops any eventually present alarm activity and, if the module is in <b>alarm mode</b>, it exits the <b>alarm mode</b> and enters the <b>normal operating mode</b>.</p> <p>Parameter:  <b>&lt;opmode&gt;</b> - operating mode            0 - normal operating mode; the module exits the <b>alarm mode</b>, enters the <b>normal operating mode</b>, any alarm activity is stopped (e.g. alarm tone playing) and an <b>OK</b> result code is returned.</p> <p>Note: the <b>alarm mode</b> is indicated by status <b>ON</b> of hardware pin <b>CTS</b> and by status <b>ON</b> of pin <b>DSR</b>; the <b>power saving</b> status is indicated by a <b>CTS - OFF</b> and <b>DSR - OFF</b> status; the <b>normal operating status</b> is indicated by <b>DSR - ON</b>.</p> <p>Note: during the <b>alarm mode</b> the device will not make any network scan and will not register to any network and therefore is not able to dial or receive any call or SM, the only commands that can be issued to the MODULE in this state are the <b>#WAKE</b> and <b>#SHDN</b>, every other command must not be issued during this state.</p> <p>Note: if #WAKE=0 command is issued after an alarm has been set with +CALA command, but before the alarm has expired, it will answer <b>OK</b> but have no effect.</p>	
AT#WAKE?	<p>Read command returns the <b>operating status</b> of the device in the format:</p> <p><b>#WAKE: &lt;status&gt;</b></p> <p>where:  <b>&lt;status&gt;</b>            0 - normal operating mode            1 - alarm mode or normal operating mode with some alarm activity.</p>	
AT#WAKE=?	Test command returns <b>OK</b> result code.	

### 3.5.7.1.19. Query Temperature Overflow - #QTEMP

#QTEMP - Query Temperature Overflow		SELINT 0 / 1
AT#QTEMP	Set command has currently no effect. The interpretation of parameter <mode> is	

#QTEMP - Query Temperature Overflow		SELINT 0 / 1
[=<mode>]	<p>currently not implemented.</p> <p>Note: if parameter &lt;mode&gt; is omitted the behaviour of Set command is the same as Read command</p> <p>Note: Only &lt;mode&gt;=0 is accepted.</p>	
AT#QTEMP?	<p>Read command queries the device internal temperature sensor for over temperature and reports the result in the format:</p> <p><b>#QTEMP: &lt;temp&gt;</b></p> <p>where</p> <p>&lt;temp&gt; - over temperature indicator</p> <p>0 - the device temperature is in the <i>working range</i>      1 - the device temperature is out of the <i>working range</i></p> <p>Note: typical <i>temperature working range</i> is (-10°C..+55°C); anyway you are strongly recommended to consult the “Hardware User Guide” to verify the real temperature working range of your module</p>	
#QTEMP=?	Test command reports supported range of values for parameter <mode>.	
Note	The device should not be operated out of its <i>temperature working range</i> ; if temperature is out of range proper functioning of the device is not ensured.	

#QTEMP - Query Temperature Overflow		SELINT 2
AT#QTEMP=<mode>	Set command has currently no effect. The interpretation of parameter <mode> is currently not implemented: any value assigned to it will simply have no effect.	
AT#QTEMP?	<p>Read command queries the device internal temperature sensor for over temperature and reports the result in the format:</p> <p><b>#QTEMP: &lt;temp&gt;</b></p> <p>where</p> <p>&lt;temp&gt; - over temperature indicator</p> <p>0 - the device temperature is in the <i>working range</i>      1 - the device temperature is out of the <i>working range</i></p> <p>Note: typical <i>temperature working range</i> is (-10°C..+55°C); anyway you are strongly recommended to consult the “Hardware User Guide” to verify the real temperature working range of your module</p>	
#QTEMP=?	Test command reports supported range of values for parameter <mode>.	
Note	The device should not be operated out of its <i>temperature working range</i> , elsewhere proper functioning of the device is not ensured.	

### 3.5.7.1.20. Temperature Monitor - #TEMPMON

#TEMPMON - Temperature Monitor	SELINT 2
<p><b>AT#TEMPMON=</b>  <b>&lt;mod&gt;</b>  <b>[,&lt;uremode&gt;</b>  <b>[,&lt;action&gt;</b>  <b>[,&lt;hyst_time&gt;</b>  <b>[,&lt;GPIO&gt;]]]</b></p>	<p>Set command sets the behaviour of the module internal temperature monitor.</p> <p>Parameters:</p> <p><b>&lt;mod&gt;</b></p> <p>0 - sets the command parameters.          1 - triggers the measurement of the module internal temperature, reporting the result in the format:</p> <p><b>#TEMPMEAS: &lt;level&gt;,&lt;value&gt;</b></p> <p>where:  <b>&lt;level&gt;</b> - threshold level          -2 - extreme temperature lower bound (see Note)          -1 - operating temperature lower bound (see Note)          0 - normal temperature          1 - operating temperature upper bound (see Note)          2 - extreme temperature upper bound (see Note)</p> <p><b>&lt;value&gt;</b> - actual temperature expressed in Celsius degrees.</p> <p><i>Setting of the following optional parameters has meaning only if &lt;mod&gt;=0</i></p> <p><b>&lt;uremode&gt;</b> - URC presentation mode.          0 - it disables the presentation of the temperature monitor URC          1 - it enables the presentation of the temperature monitor URC, whenever the module internal temperature reaches either operating or extreme levels; the unsolicited message is in the format:</p> <p><b>#TEMPMEAS: &lt;level&gt;,&lt;value&gt;</b></p> <p>where:  <b>&lt;level&gt;</b> and <b>&lt;value&gt;</b> are as before</p> <p><b>&lt;action&gt;</b> - sum of integers, each representing an action to be done whenever the module internal temperature reaches either operating or extreme levels (default is 0). If <b>&lt;action&gt;</b> is not zero, it is mandatory to set the <b>&lt;hyst_time&gt;</b> parameter too.</p> <p>0..7 - as a sum of:          0 - no action          1 - automatic shut-down when the temperature is beyond the extreme bounds          2 - RF TX circuits automatically disabled (using <b>+CFUN=2</b>) when operating temperature bounds are reached. When the temperature is back to normal the module is brought back to the previous state, before RF</p>

	<p>TX disabled.</p> <p>4 - the output pin &lt;GPIO&gt; is tied HIGH when operating temperature bounds are reached; when the temperature is back to normal the output pin &lt;GPIO&gt; is tied LOW. If this &lt;action&gt; is required, it is mandatory to set the &lt;GPIO&gt; parameter too.</p> <p>&lt;hyst_time&gt; - hysteresis time: all the actions happen only if the extreme or operating bounds are maintained at least for this period. This parameter is needed and required if &lt;action&gt; is not zero. 0..255 - time in seconds</p> <p>&lt;GPIO&gt; - GPIO number. valid range is “any output pin” (see “Hardware User’s Guide”). This parameter is needed and required only if &lt;action&gt;=4 is required.</p> <p>Note: the URC presentation mode &lt;urcmode&gt; is related to the current AT instance only (see +cmux); last &lt;urcmode&gt; settings are saved for every instance as extended profile parameters, thus it is possible to restore them either if the multiplexer control channel is released and set up, back and forth.</p> <p>Note: last &lt;action&gt;, &lt;hyst_time&gt; and &lt;GPIO&gt; settings are saved in NVM too, but they are not related to the current CMUX instance only (see +cmux).</p>
AT#TEMPMON?	Read command reports the current parameter settings for #TEMPMON command in the format:  <b>#TEMPMON: &lt;urcmode&gt;,&lt;action&gt;[,&lt;hyst_time&gt;[,&lt;GPIO&gt;]]</b>
AT#TEMPMON=?	Test command reports the supported range of values for parameters <mod>, <urcmode>, <action>, <hyst_time> and <GPIO>

Note	<p>In the following table typical temperature bounds are represented for all products except GE864-QUAD AUTOMOTIVE V2 and GE864-QUAD ATEX</p> <table border="1"> <tbody> <tr> <td>Extreme Temperature Lower Bound</td><td>-30°C</td></tr> <tr> <td>Operating Temperature Lower Bound</td><td>-10°C</td></tr> <tr> <td>Operating Temperature</td><td></td></tr> <tr> <td>Operating Temperature Upper Bound</td><td>55°C</td></tr> <tr> <td>Extreme Temperature Upper Bound</td><td>80°C</td></tr> </tbody> </table> <p>In the following table typical temperature bounds are represented for GE864-QUAD AUTOMOTIVE V2 and GE864-QUAD ATEX products.</p> <table border="1"> <tbody> <tr> <td>Extreme Temperature Lower Bound</td><td>-50°C</td></tr> <tr> <td>Operating Temperature Lower Bound</td><td>-30°C</td></tr> <tr> <td>Operating Temperature</td><td></td></tr> <tr> <td>Operating Temperature Upper Bound</td><td>85°C</td></tr> <tr> <td>Extreme Temperature Upper Bound</td><td>120°C</td></tr> </tbody> </table>	Extreme Temperature Lower Bound	-30°C	Operating Temperature Lower Bound	-10°C	Operating Temperature		Operating Temperature Upper Bound	55°C	Extreme Temperature Upper Bound	80°C	Extreme Temperature Lower Bound	-50°C	Operating Temperature Lower Bound	-30°C	Operating Temperature		Operating Temperature Upper Bound	85°C	Extreme Temperature Upper Bound	120°C
Extreme Temperature Lower Bound	-30°C																				
Operating Temperature Lower Bound	-10°C																				
Operating Temperature																					
Operating Temperature Upper Bound	55°C																				
Extreme Temperature Upper Bound	80°C																				
Extreme Temperature Lower Bound	-50°C

Operating Temperature																					
Operating Temperature Upper Bound	85°C																				
Extreme Temperature Upper Bound	120°C																				

### 3.5.7.1.21. Set General Purpose Output - #SGPO

#SGPO - Set General Purpose Output	SELINT 0 / 1
<b>AT#SGPO[= &lt;stat&gt;]</b> Set command sets the value of the general purpose output pin <b>GPIO2</b> . Parameter: <b>&lt;stat&gt;</b> 0 - output pin cleared to 0 ( <b>Low</b> ) 1 - output pin set to 1 ( <b>High</b> )  Note: the <b>GPIO2</b> is an OPEN COLLECTOR output, the command sets the transistor base level, hence the open collector output is negated: <b>AT#SGPO=0</b> sets the open collector output <b>High</b> <b>AT#SGPO=1</b> sets the open collector output <b>Low</b> A pull up resistor is required on pin <b>GPIO2</b> .  Note: issuing <b>AT#SGPO&lt;CR&gt;</b> is the same as issuing the Read command.  Note: issuing <b>AT#SGPO=&lt;CR&gt;</b> is the same as issuing the command <b>AT#SGPO=0&lt;CR&gt;</b> .	
<b>AT#SGPO?</b>	Read command reports the <b>#SGPO</b> command setting, hence the opposite status of the open collector pin in the format:  <b>#SGPO: &lt;stat&gt;</b> .
<b>AT#SGPO=?</b>	Test command reports the supported range of values of parameter <b>&lt;stat&gt;</b> .

### 3.5.7.1.22. General Purpose Input - #GGPI

#GGPI - General Purpose Input	SELINT 0 / 1
<b>AT#GGPI[=&lt;dir&gt;]</b> Set command sets the general purpose input pin <b>GPIO1</b> . Parameter: <b>&lt;dir&gt;</b> - auxiliary input GPIO1 setting 0 - the Read command <b>AT#GGPI?</b> reports the logic input level read from GPIO1 pin.  Note: The device has an insulated input pin (the input goes the base of an internal decoupling transistor) which can be used as a logic general purpose input. This command sets the read behaviour for this pin, since only direct read report is supported, the issue of this command is not needed. In future uses the behavior of the read input may be more complex.  Note: If parameter is omitted then the behaviour of Set command is the same as Read command	
<b>AT#GGPI?</b>	Read command reports the read value for the input pin GPIO1, in the format:  <b>#GGPI: &lt;dir&gt;,&lt;stat&gt;</b>

#GGPI - General Purpose Input	SELINT 0 / 1
	<p>where</p> <p>&lt;dir&gt; - direction setting (see #GGPI=&lt;dir&gt; )</p> <p>&lt;stat&gt; - logic value read from pin GPIO1</p> <p>Note: Since the reading is done after the insulating transistor, the reported value is the opposite of the logic status of the GPIO1 input pin.</p>
AT#GGPI=?	Test command reports supported range of values for parameter <dir>.

### 3.5.7.1.23. General Purpose Input/Output Pin Control - #GPIO

#GPIO - General Purpose Input/Output Pin Control	SELINT 0/1
AT#GPIO=[<pin>,<mode>[,<dir>]]	<p>Execution command sets the value of the general purpose output pin <b>GPIO&lt;pin&gt;</b> according to &lt;dir&gt; and &lt;mode&gt; parameter.</p> <p>Not all configurations for the three parameters are valid.</p> <p>Parameters:</p> <p>&lt;pin&gt; - GPIO pin number; supported range is from 1 to a value that depends on the hardware.</p> <p>&lt;mode&gt; - its meaning depends on &lt;dir&gt; setting:</p> <ul style="list-style-type: none"> <li>0 - no meaning if &lt;dir&gt;=0 - INPUT                     <ul style="list-style-type: none"> <li>- output pin cleared to 0 (<b>Low</b>) if &lt;dir&gt;=1 - OUTPUT</li> <li>- no meaning if &lt;dir&gt;=2 - ALTERNATE FUNCTION</li> <li>- no meaning if &lt;dir&gt;=3 – TRISTATE PULL DOWN</li> </ul> </li> <li>1 - no meaning if &lt;dir&gt;=0 - INPUT                     <ul style="list-style-type: none"> <li>- output pin set to 1 (<b>High</b>) if &lt;dir&gt;=1 - OUTPUT</li> <li>- no meaning if &lt;dir&gt;=2 - ALTERNATE FUNCTION</li> <li>- no meaning if &lt;dir&gt;=3 – TRISTATE PULL DOWN</li> </ul> </li> <li>2 - Reports the read value from the input pin if &lt;dir&gt;=0 - INPUT                     <ul style="list-style-type: none"> <li>- Reports the read value from the input pin if &lt;dir&gt;=1 - OUTPUT</li> <li>- Reports a no meaning value if &lt;dir&gt;=2 - ALTERNATE FUNCTION</li> <li>- Reports a no meaning if &lt;dir&gt;=3 – TRISTATE PULL DOWN</li> </ul> </li> </ul> <p>&lt;dir&gt; - GPIO pin direction</p> <ul style="list-style-type: none"> <li>0 - pin direction is INPUT</li> <li>1 - pin direction is OUTPUT</li> <li>2 - pin direction is ALTERNATE FUNCTION (see Note).</li> <li>3 - pin is set to PULL DOWN ( see Note)</li> </ul> <p>Note: when &lt;mode&gt;=2 (and &lt;dir&gt; is omitted) the command reports the direction and value of pin <b>GPIO&lt;pin&gt;</b> in the format:</p> <p><b>#GPIO: &lt;dir&gt;,&lt;stat&gt;</b></p>

#GPIO - General Purpose Input/Output Pin Control	SELINT 0/1
	<p>where:</p> <p>&lt;dir&gt; - current direction setting for the GPIO&lt;pin&gt;</p> <p>&lt;stat&gt;</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> logic value read from pin GPIO&lt;pin&gt; in the case the pin &lt;dir&gt; is set to input;</li> <li><input type="checkbox"/> logic value present in output of the pin GPIO&lt;pin&gt; in the case the pin &lt;dir&gt; is currently set to output;</li> <li><input type="checkbox"/> no meaning value for the pin GPIO&lt;pin&gt; in the case the pin &lt;dir&gt; is set to alternate function or Tristate pull down</li> </ul> <p>Note: "ALTERNATE FUNCTION" value is valid only for following pins:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> <b>GPIO4</b> - alternate function is "RF Transmission Control"</li> <li><input type="checkbox"/> <b>GPIO5</b> - alternate function is "RF Transmission Monitor"</li> <li><input type="checkbox"/> <b>GPIO6</b> - alternate function is "Alarm Output" (see +CALA and #ALARMPIN)</li> <li><input type="checkbox"/> <b>GPIO7</b> - alternate function is "Buzzer Output" (see #SRP)</li> </ul> <p>Note: while using the pins in the alternate function, the GPIO read/write access to that pin is not accessible and shall be avoided.</p> <p>Note: Tristate pull down settings is available only on some products and GPIO. In case it is not available, automatically the setting is reverted to INPUT. Check the product HW user guide to verify if Tristate pull down settings is available and if it is the default at system start-up</p>
AT#GPIO?	<p>Read command reports the read direction and value of all <b>GPIO</b> pins, in the format:</p> <p><b>#GPIO: &lt;dir&gt;,&lt;stat&gt;[&lt;CR&gt;&lt;LF&gt;#GPIO: &lt;dir&gt;,&lt;stat&gt;[...]]</b></p> <p>where</p> <p>&lt;dir&gt; - as seen before</p> <p>&lt;stat&gt; - as seen before</p>
AT#GPIO=?	<p>Test command reports the supported range of values of the command parameters &lt;pin&gt;, &lt;mode&gt; and &lt;dir&gt;.</p>
Example	<pre>AT#GPIO=3,0,1 OK AT#GPIO=3,2 #GPIO: 1,0 OK AT#GPIO=4,1,1 OK AT#GPIO=5,0,0 OK AT#GPIO=6,2 #GPIO: 0,1 OK</pre>

#GPIO - General Purpose Input/Output Pin Control	SELINT 2
<p><b>AT#GPIO=[&lt;pin&gt;, &lt;mode&gt;[,&lt;dir&gt;]]</b></p> <p>Execution command sets the value of the general purpose output pin <b>GPIO&lt;pin&gt;</b> according to <b>&lt;dir&gt;</b> and <b>&lt;mode&gt;</b> parameter.</p> <p>Not all configurations for the three parameters are valid.</p> <p>Parameters:</p> <p>&lt;<b>pin</b>&gt; - GPIO pin number; supported range is from 1 to a value that depends on the hardware.</p> <p>&lt;<b>mode</b>&gt; - its meaning depends on &lt;<b>dir</b>&gt; setting:</p> <ul style="list-style-type: none"> <li>0 - no meaning if &lt;<b>dir</b>&gt;=0 - INPUT <ul style="list-style-type: none"> <li>- output pin cleared to 0 (<b>Low</b>) if &lt;<b>dir</b>&gt;=1 - OUTPUT</li> <li>- no meaning if &lt;<b>dir</b>&gt;=2 - ALTERNATE FUNCTION</li> <li>- no meaning if &lt;<b>dir</b>&gt;=3 - TRISTATE PULL DOWN</li> <li>- no meaning if &lt;<b>dir</b>&gt;=4 - 2<sup>nd</sup> ALTERNATE FUNCTION</li> </ul> </li> <li>1 - no meaning if &lt;<b>dir</b>&gt;=0 - INPUT <ul style="list-style-type: none"> <li>- output pin set to 1 (<b>High</b>) if &lt;<b>dir</b>&gt;=1 - OUTPUT</li> <li>- no meaning if &lt;<b>dir</b>&gt;=2 - ALTERNATE FUNCTION</li> <li>- no meaning if &lt;<b>dir</b>&gt;=3 - TRISTATE PULL DOWN</li> <li>- no meaning if &lt;<b>dir</b>&gt;=4 - 2<sup>nd</sup> ALTERNATE FUNCTION</li> </ul> </li> <li>2 - Reports the read value from the input pin if &lt;<b>dir</b>&gt;=0 - INPUT <ul style="list-style-type: none"> <li>- Reports the read value from the input pin if &lt;<b>dir</b>&gt;=1 - OUTPUT</li> <li>- Reports a no meaning value if &lt;<b>dir</b>&gt;=2 - ALTERNATE FUNCTION</li> <li>- Reports a no meaning if &lt;<b>dir</b>&gt;=3 - TRISTATE PULL DOWN</li> <li>- Reports a no meaning if &lt;<b>dir</b>&gt;=4 - 2<sup>nd</sup> ALTERNATE FUNCTION</li> </ul> </li> </ul> <p>&lt;<b>dir</b>&gt; - GPIO pin direction</p> <ul style="list-style-type: none"> <li>0 - pin direction is INPUT</li> <li>1 - pin direction is OUTPUT</li> <li>2 - pin direction is ALTERNATE FUNCTION (see Note).</li> <li>3 - pin is set to PULL DOWN ( see Note)</li> <li>4 - pin direction is 2<sup>nd</sup> ALTERNATE FUNCTION (see Note).</li> </ul> <p>Note: when &lt;<b>mode</b>&gt;=2 (and &lt;<b>dir</b>&gt; is omitted) the command reports the direction and value of pin <b>GPIO&lt;pin&gt;</b> in the format:</p> <p><b>#GPIO: &lt;dir&gt;,&lt;stat&gt;</b></p> <p>where:</p> <p>&lt;<b>dir</b>&gt; - current direction setting for the <b>GPIO&lt;pin&gt;</b></p> <p>&lt;<b>stat</b>&gt;</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> logic value read from pin <b>GPIO&lt;pin&gt;</b> in the case the pin &lt;<b>dir</b>&gt; is set to input;</li> <li><input type="checkbox"/> logic value present in output of the pin <b>GPIO&lt;pin&gt;</b> in the case the pin &lt;<b>dir</b>&gt; is currently set to output;</li> <li><input type="checkbox"/> no meaning value for the pin <b>GPIO&lt;pin&gt;</b> in the case the pin &lt;<b>dir</b>&gt; is set to alternate function or Tristate pull down</li> </ul>	

#GPIO - General Purpose Input/Output Pin Control	SELINT 2
<p>Note: "ALTERNATE FUNCTION" value is valid only for following pins:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> <b>GPIO4</b> - alternate function is "RF Transmission Control"</li> <li><input type="checkbox"/> <b>GPIO5</b> - alternate function is "RF Transmission Monitor"</li> <li><input type="checkbox"/> <b>GPIO6</b> - alternate function is "Alarm Output" (see <b>+CALA</b> and <b>#ALARMPIN</b>)</li> <li><input type="checkbox"/> <b>GPIO7</b> - alternate function is "Buzzer Output" (see <b>#SRP</b>)</li> </ul> <p>Note: "2<sup>nd</sup> ALTERNATE FUNCTION" has no effect except on GE866 family, and it will return always OK, but the GPIO direction doesn't change.</p> <p>Note: while using the pins in the alternate function, the GPIO read/write access to that pin is not accessible and shall be avoided.</p> <p style="text-align: center;"><i>For GE866 family products only</i></p> <p>Note: "ALTERNATE FUNCTION" value is valid only for following pins:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> <b>GPIO4</b> - alternate function is "RF Transmission Control"</li> <li><input type="checkbox"/> <b>GPIO5</b> - alternate function is "RF Transmission Monitor"</li> <li><input type="checkbox"/> <b>GPIO6</b> - alternate function is "Alarm Output" (see <b>+CALA</b> and <b>#ALARMPIN</b>)</li> </ul> <p>Note: "2<sup>nd</sup> ALTERNATE FUNCTION" value is valid only for following pin:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> <b>GPIO6</b> – 2<sup>nd</sup> alternate function is "Buzzer Output" (see <b>#SRP</b>)</li> </ul> <p>For other GPIO the command returns OK but the GPIO direction doesn't change</p> <p>Note: while using the pins in the alternate function, the GPIO read/write access to that pin is not accessible and shall be avoided.</p> <p style="text-align: center;"><i>For GM862 family products only</i></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> <b>GPIO1</b> is input only and <b>GPIO2</b> is output only.</li> <li><input type="checkbox"/> since the <b>GPIO1</b> reading is done after an insulating transistor, the reported value is the opposite of the logic status of the <b>GPIO1</b> input pin</li> </ul> <ol style="list-style-type: none"> <li>1. <b>GPIO2</b> is an OPEN COLLECTOR output, the command sets the transistor base level, hence the open collector output is negated</li> </ol> <p>Note: Tristate pull down settings is available only on some products and GPIO. In case it is not available, automatically the setting is reverted to INPUT. Check the product HW user guide to verify if Tristate pull down settings is available and if it is the default at system start-up</p>	
<b>AT#GPIO?</b>	Read command reports the read direction and value of all <b>GPIO</b> pins, in the format:  <b>#GPIO: &lt;dir&gt;,&lt;stat&gt;[&lt;CR&gt;&lt;LF&gt;]</b> <b>#GPIO: &lt;dir&gt;,&lt;stat&gt;[...]</b>  where <b>&lt;dir&gt;</b> - as seen before

#GPIO - General Purpose Input/Output Pin Control		SELINT 2
<stat> - as seen before		
AT#GPIO=?	Test command reports the supported range of values of the command parameters <pin>, <mode> and <dir>.	
Example	AT#GPIO=3,0,1 OK AT#GPIO=3,2 #GPIO: 1,0 OK AT#GPIO=4,1,1 OK AT#GPIO=5,0,0 OK AT#GPIO=6,2 #GPIO: 0,1 OK	

### 3.5.7.1.24. Alarm Pin - #ALARMPIN

#ALARMPIN – Alarm Pin		SELINT 2
AT#ALARMPIN=<pin>	Set command sets the GPIO pin for the ALARM pin  Parameters: <b>&lt;pin&gt;</b> defines which GPIO shall be used as ALARM pin instead of GPIO6/ALARM. For the <pin> actual range check the “Hardware User Guide”. Default value is 6.  Note: the setting is saved in NVM  Note: setting <pin> equal to 0 disables the ALARM pin	
AT#ALARMPIN?	Read command returns the current parameter settings for #ALARMPIN command in the format:	
	#ALARMPIN: <pin>	
AT#ALARMPIN=?	Test command reports the supported range of values for parameter <pin>.	

### 3.5.7.1.25. STAT\_LED GPIO Setting - #SLED

#SLED - STAT_LED GPIO Setting		SELINT 2
AT#SLED=<mode> [<on_duration> [<off_duration>]]	Set command sets the behaviour of the STAT_LED GPIO  Parameters:	

#SLED - STAT_LED GPIO Setting	SELINT 2
	<p>&lt;mode&gt; - defines how the <b>STAT_LED</b> GPIO is handled          0 - GPIO tied <b>Low</b> (default for GL865-DUAL, GL868-DUAL, GE910-QUAD and GE910-GNSS)          1 - GPIO tied <b>High</b>          2 - GPIO handled by Module Software (factory default)          3 - GPIO is turned on and off alternatively, with period defined by the sum              &lt;on_duration&gt; + &lt;off_duration&gt;          &lt;on_duration&gt; - duration of period in which <b>STAT_LED</b> GPIO is tied <b>High</b> while              &lt;mode&gt;=3          1..100 - in tenth of seconds (default is 10)          &lt;off_duration&gt; - duration of period in which <b>STAT_LED</b> GPIO is tied <b>Low</b> while              &lt;mode&gt;=3          1..100 - in tenth of seconds (default is 10)</p> <p>Note: values are saved in NVM by command #SLEDSAV</p> <p>Note: at module boot the <b>STAT_LED</b> GPIO is always tied <b>High</b> and holds this value until the first NVM reading.</p>
AT#SLED?	Read command returns the <b>STAT_LED</b> GPIO current setting, in the format:  <b>#SLED: &lt;mode&gt;,&lt;on_duration&gt;,&lt;off_duration&gt;</b>
AT#SLED=?	Test command returns the range of available values for parameters <mode>, <on_duration> and <off_duration>.

### 3.5.7.1.26. Save STAT\_LED GPIO Setting - #SLEDSAV

#SLEDSAV - Save STAT_LED GPIO Setting	SELINT 2
AT#SLEDSAV	Execution command saves <b>STAT_LED</b> setting in NVM.
AT#SLED=?	Test command returns <b>OK</b> result code.

### 3.5.7.1.27. SMS Ring Indicator - #E2SMSRI

#E2SMSRI - SMS Ring Indicator	SELINT 0 / 1
AT#E2SMSRI[=<n>]]	<p>Set command enables/disables the Ring Indicator pin response to an incoming SMS message. If enabled, a negative going pulse is generated on receipt of an incoming SMS message. The duration of this pulse is determined by the value of &lt;n&gt;.</p> <p>Parameter:</p> <p>&lt;n&gt; - RI enabling          0 - disables <b>RI</b> pin response for incoming SMS messages (factory default)          50..1150 - enables <b>RI</b> pin response for incoming SMS messages. The value of &lt;n&gt; is the duration in ms of the pulse generated on receipt of an incoming SM.</p> <p>Note: if +CNMI=3,1 command is issued and the module is in a GPRS connection,</p>

#E2SMSRI - SMS Ring Indicator		SELINT 0 / 1
	<p>a 100 ms break signal is sent and a 1 sec. pulse is generated on <b>RI</b> pin, no matter if the <b>RI</b> pin response is either enabled or not.</p> <p>Note: issuing <b>AT#E2SMSRI&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT#E2SMSRI=&lt;CR&gt;</b> returns the <b>OK</b> result code.</p>	
<b>AT#E2SMSRI?</b>	<p>Read command reports the duration in ms of the pulse generated on receipt of an incoming SM, in the format:</p> <p><b>#E2SMSRI: &lt;n&gt;</b></p> <p>Note: as seen before, the value <b>&lt;n&gt;=0</b> means that the <b>RI</b> pin response to an incoming SM is disabled.</p>	
<b>AT#E2SMSRI=?</b>	Reports the range of supported values for parameter <b>&lt;n&gt;</b>	

#E2SMSRI - SMS Ring Indicator		SELINT 2
<b>AT#E2SMSRI=[&lt;n&gt;]</b>	<p>Set command enables/disables the Ring Indicator pin response to an incoming SMS message. If enabled, a negative going pulse is generated on receipt of an incoming SMS message. The duration of this pulse is determined by the value of <b>&lt;n&gt;</b>.</p> <p>Parameter:  <b>&lt;n&gt;</b> - <b>RI</b> enabling          0 - disables <b>RI</b> pin response for incoming SMS messages (factory default)          50..1150 - enables <b>RI</b> pin response for incoming SMS messages. The value of <b>&lt;n&gt;</b> is the duration in ms of the pulse generated on receipt of an incoming SM.</p> <p>Note: if <b>+CNMI=3,1</b> command is issued and the module is in a GPRS connection, a 100 ms break signal is sent and a 1 sec. pulse is generated on <b>RI</b> pin, no matter if the <b>RI</b> pin response is either enabled or not.</p>	
<b>AT#E2SMSRI?</b>	<p>Read command reports the duration in ms of the pulse generated on receipt of an incoming SM, in the format:</p> <p><b>#E2SMSRI: &lt;n&gt;</b></p> <p>Note: as seen before, the value <b>&lt;n&gt;=0</b> means that the <b>RI</b> pin response to an incoming SM is disabled.</p>	
<b>AT#E2SMSRI=?</b>	Reports the range of supported values for parameter <b>&lt;n&gt;</b>	

### 3.5.7.1.28. Analog/Digital Converter Input - #ADC

#ADC - Analog/Digital Converter Input		SELINT 0 / 1
<b>AT#ADC[=&lt;adc&gt;,&lt;mode&gt;[,&lt;dir&gt;]]</b>	Execution command reads pin<adc> voltage, converted by ADC, and outputs it in the format:  <b>#ADC: &lt;value&gt;</b>	

#ADC - Analog/Digital Converter Input	SELINT 0 / 1
<p>where:  <b>&lt;value&gt;</b> - pin&lt;adc&gt; voltage, expressed in mV</p> <p>Parameters:  <b>&lt;adc&gt;</b> - index of pin  For the number of available ADCs see HW User Guide</p> <p><b>&lt;mode&gt;</b> - required action  2 - query ADC value  <b>&lt;dir&gt;</b> - direction; its interpretation is currently not implemented  0 - no effect.</p> <p>If all parameters are omitted the command reports all pins voltage, converted by ADC, in the format:</p> <p><b>#ADC: &lt;value&gt;[&lt;CR&gt;&lt;LF&gt;#ADC: &lt;value&gt;[...]]</b></p> <p>Note: The command returns the last valid measure.</p>	
<b>AT#ADC?</b>	Read command has the same effect as Execution command when all parameters are omitted.
<b>AT#ADC=?</b>	Test command reports the supported range of values of the command parameters <b>&lt;adc&gt;</b> , <b>&lt;mode&gt;</b> and <b>&lt;dir&gt;</b> .

#ADC - Read Analog/Digital Converter input	SELINT 2
<p><b>AT#ADC=</b>  <b>[&lt;adc&gt;,&lt;mode&gt;</b>  <math>[\langle\text{dir}\rangle]</math></p> <p>Execution command reads pin&lt;adc&gt; voltage, converted by ADC, and outputs it in the format:</p> <p><b>#ADC: &lt;value&gt;</b></p> <p>where:  <b>&lt;value&gt;</b> - pin&lt;adc&gt; voltage, expressed in mV</p> <p>Parameters:  <b>&lt;adc&gt;</b> - index of pin  For the number of available ADCs see HW User Guide</p> <p><b>&lt;mode&gt;</b> - required action  2 - query ADC value  <b>&lt;dir&gt;</b> - direction; its interpretation is currently not implemented  0 - no effect.</p> <p>Note: The command returns the last valid measure.</p>	
<b>AT#ADC?</b>	Read command reports all pins voltage, converted by ADC, in the format:
	<b>#ADC: &lt;value&gt;[&lt;CR&gt;&lt;LF&gt;#ADC: &lt;value&gt;[...]]</b>

#ADC - Read Analog/Digital Converter input	SELINT 2
AT#ADC=?	Test command reports the supported range of values of the command parameters <adc>, <mode> and <dir>.

### 3.5.7.1.29. Digital/Analog Converter Control - #DAC

#DAC - Digital/Analog Converter Control	SELINT 0 / 1
AT#DAC[= <enable> [,<value>]]	<p>Set command enables/disables the <b>DAC_OUT</b> pin.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;enable&gt; - enables/disables DAC output.</li> <li>0 - disables pin; it is in high impedance status (factory default)</li> <li>1 - enables pin; the corresponding output is driven</li> </ul> <p>&lt;value&gt; - scale factor of the integrated output voltage; it must be present if &lt;enable&gt;=1</p> <p>0..1023 - 10 bit precision</p> <p><b>Note:</b> <b>integrated output voltage = MAX_VOLTAGE * value / 1023</b></p> <p><b>Note:</b> if all parameters are omitted then the behaviour of Set command is the same as the Read command.</p>
AT#DAC?	Read command reports whether the <b>DAC_OUT</b> pin is currently enabled or not, along with the integrated output voltage scale factor, in the format:  <b>#DAC: &lt;enable&gt;,&lt;value&gt;</b>
AT#DAC=?	Test command reports the range for the parameters <enable> and <value>.
Example	<p>Enable the DAC out and set its integrated output to the 50% of the max value:</p> <p>AT#DAC=1,511 OK</p> <p>Disable the DAC out:</p> <p>AT#DAC=0 OK</p>
Note	<p>With this command the DAC frequency is selected internally. D/A converter must not be used during POWERSAVING.</p> <p><b>DAC_OUT</b> line must be integrated (for example with a low band pass filter) in order to obtain an analog voltage. For a more in depth description of the integration filter refer to the hardware user guide.</p>

#DAC - Digital/Analog Converter Control	SELINT 2
AT#DAC=[<enable>]	Set command enables/disables the <b>DAC_OUT</b> pin.

#DAC - Digital/Analog Converter Control		SELINT 2
[,<value>]]	<p>Parameters:</p> <p>&lt;enable&gt; - enables/disables DAC output.          0 - disables pin; it is in high impedance status (factory default)          1 - enables pin; the corresponding output is driven</p> <p>&lt;value&gt; - scale factor of the integrated output voltage; it must be present if &lt;enable&gt;=1          0..1023 - 10 bit precision</p>	
		Note: <b>integrated output voltage = MAX_VOLTAGE * value / 1023</b>
AT#DAC?	Read command reports whether the <b>DAC_OUT</b> pin is currently enabled or not, along with the integrated output voltage scale factor, in the format:	#DAC: <enable>,<value>
AT#DAC=?	Test command reports the range for the parameters <enable> and <value>.	
Example	<p><i>Enable the DAC out and set its integrated output to the 50% of the max value:</i></p> <p>AT#DAC=1,511          OK</p> <p><i>Disable the DAC out:</i></p> <p>AT#DAC=0          OK</p>	
Note	<p>With this command the DAC frequency is selected internally.          D/A converter must not be used during POWERSAVING.</p> <p><b>DAC_OUT</b> line must be integrated (for example with a low band pass filter) in order to obtain an analog voltage.          For a more in depth description of the integration filter refer to the hardware user guide.</p>	

### 3.5.7.1.30. Auxiliary Voltage Output Control - #VAUX

#VAUX- Auxiliary Voltage Output Control		SELINT 0 / 1
AT#VAUX[=<n>,<stat>]	<p>Set command enables/disables the Auxiliary Voltage pins output.</p> <p>Parameters:</p> <p>&lt;n&gt; - <b>VAUX</b> pin index          1 - there is currently just one <b>VAUX</b> pin</p> <p>&lt;stat&gt;</p> <ul style="list-style-type: none"> <li>0 - output off</li> <li>1 - output on</li> <li>2 - query current value of <b>VAUX</b> pin</li> </ul>	

Note: when <stat>=2 and command is successful, it returns:

#VAUX- Auxiliary Voltage Output Control		SELINT 0 / 1
	<p><b>#VAUX: &lt;value&gt;</b></p> <p>where:  <b>&lt;value&gt;</b> - power output status          0 - output off          1 - output on</p> <p>Note: If all parameters are omitted the command has the same behaviour as Read command.</p> <p>Note: for the GPS product: if the Auxiliary Voltage pin output is disabled while GPS is powered on they'll both also be turned off.</p> <p>Note: for the GPS products, at commands \$GPSP, \$GPSPS, \$GPSWK control VAUX and can interfere with AT# command.</p>	
<b>AT#VAUX?</b>	Read command reports whether the Auxiliary Voltage pin output is currently enabled or not, in the format:	
	<b>#VAUX: &lt;value&gt;</b>	
<b>AT#VAUX=?</b>	Test command reports the supported range of values for parameters <b>&lt;n&gt;</b> , <b>&lt;stat&gt;</b> .	
<b>NOTE:</b>	Command available only on GE864-QUAD and GC864-QUAD with SW 10.00.xxx	

#VAUX- Auxiliary Voltage Output Control		SELINT 2
<b>AT#VAUX= [&lt;n&gt;,&lt;stat&gt;]</b>	<p>Set command enables/disables the Auxiliary Voltage pins output.</p> <p>Parameters:  <b>&lt;n&gt;</b> - VAUX pin index          1 - there is currently just one VAUX pin  <b>&lt;stat&gt;</b>          0 - output off          1 - output on          2 - query current value of VAUX pin</p> <p>Note: when <b>&lt;stat&gt;=2</b> and command is successful, it returns:</p> <p><b>#VAUX: &lt;value&gt;</b></p> <p>where:  <b>&lt;value&gt;</b> - power output status          0 - output off          1 - output on</p> <p>Note: for the GPS product: if the Auxiliary Voltage pins output is disabled while GPS is powered on they'll both also be turned off.</p>	

#VAUX- Auxiliary Voltage Output Control		SELINT 2
Note: for the GPS products, at commands \$GPSP, \$GPSPS, \$GPSWK control VAUX and can interfere with AT# command.		
Note: the current setting is stored through #VAUXSAV		
AT#VAUX?	Read command reports whether the Auxiliary Voltage pin output is currently enabled or not, in the format:  #VAUX: <value>	
AT#VAUX=?	Test command reports the supported range of values for parameters <n>, <stat>.	
NOTE:	Command available only on GE864-QUAD and GC864-QUAD with SW 10.00.xxx	

### 3.5.7.1.31. Auxiliary Voltage Output Save - #VAUXSAV

#VAUXSAV - Auxiliary Voltage Output Save		SELINT 2
AT#VAUXSAV	Execution command saves the actual state of #VAUX pin to NVM. The state will be reload at power-up.	
AT#VAUXSAV=?	Test command returns the OK result code.	

### 3.5.7.1.32. V24 Output pins mode - #V24MODE

#V24MODE - V24 Output Pins Mode		SELINT 2
AT#V24MODE=<port>, <mode>, <when>	Set command sets the <port> serial interface functioning <mode>. Parameters: <port> - serial port: 0 – ASC0 (AT command port) 1 – ASC1 (trace port) <mode> - AT commands serial port interface hardware pins mode: 0 – Tx and Rx pins are set in push/pull function during power saving. (default) 1 – Tx and Rx pins are set in open drain function during power saving. 2 – Reserved <when> - When the command is applied: 0 – Always (default) 1 – In power saving only	
AT#V24MODE?	Read command returns actual functioning <mode> for all ports in the format:  #V24MODE: 0,<mode_port0>,<when0>[<CR><LF> #V24MODE: 1,<mode_port1>,<when1> [<CR><LF>  Where: < mode_port0> - mode of the serial port 0, < mode_port1> - mode of the serial port 1, <when0> - when setting for serial port 0, <when1> - when setting for serial port 1	
AT#V24MODE=?	Test command reports supported range of values for parameters <port>, <mode>	

<b>#V24MODE - V24 Output Pins Mode</b>	<b>SELINT 2</b>
and <when>.	

### 3.5.7.1.33. V24 Output Pins Configuration - #V24CFG

<b>#V24CFG - V24 Output Pins Configuration</b>		<b>SELINT 2</b>
AT#V24CFG=<pin>, <mode>	<p>Set command sets the AT commands serial port interface output pins mode.</p> <p>Parameters:</p> <p>&lt;pin&gt; - AT commands serial port interface hardware pin:</p> <ul style="list-style-type: none"> <li>0 - <b>DCD</b> (Data Carrier Detect)</li> <li>1 - <b>CTS</b> (Clear To Send)</li> <li>2 - <b>RI</b> (Ring Indicator)</li> <li>3 - <b>DSR</b> (Data Set Ready)</li> <li>4 - <b>DTR</b> (Data Terminal Ready). This is not an output pin: we maintain this value only for backward compatibility, but trying to set its state raises the result code “<b>ERROR</b>”</li> <li>5 - <b>RTS</b> (Request To Send). This is not an output pin: we maintain this value only for backward compatibility, but trying to set its state raises the result code “<b>ERROR</b>”</li> </ul> <p>&lt;mode&gt; - AT commands serial port interface hardware pins mode:</p> <ul style="list-style-type: none"> <li>0 - AT commands serial port mode: output pins are controlled by serial port device driver. (default)</li> <li>1 - <b>GPIO</b> mode: output pins are directly controlled by <b>#V24</b> command only.</li> </ul>	
AT#V24CFG?	<p>Read command returns actual mode for all the pins (either output and input) in the format:</p> <pre>#V24CFG: &lt;pin1&gt;,&lt;mode1&gt;[&lt;CR&gt;&lt;LF&gt;&lt;CR&gt;&lt;LF&gt; #V24CFG: &lt;pin2&gt;,&lt;mode2&gt;[...]]</pre> <p>Where:</p> <p>&lt;pinn&gt; - AT command serial port interface HW pin</p> <p>&lt;moden&gt; - AT commands serial port interface hardware pin mode</p>	
AT#V24CFG=?	Test command reports supported range of values for parameters <pin> and <mode>.	

### 3.5.7.1.34. V24 Output Pins Control - #V24

#V24 - V24 Output Pins Control	SELINT 2
<b>AT#V24=&lt;pin&gt;[,&lt;state&gt;]</b>  Set command sets the AT commands serial port interface output pins state.  Parameters: <pin> - AT commands serial port interface hardware pin: 0 - <b>DCD</b> (Data Carrier Detect) 1 - <b>CTS</b> (Clear To Send) 2 - <b>RI</b> (Ring Indicator) 3 - <b>DSR</b> (Data Set Ready) 4 - <b>DTR</b> (Data Terminal Ready). This is not an output pin: we maintain this value only for backward compatibility, but trying to set its state raises the result code “ <b>ERROR</b> ” 5 - <b>RTS</b> (Request To Send). This is not an output pin: we maintain this value only for backward compatibility, but trying to set its state raises the result code “ <b>ERROR</b> ” <state> - State of AT commands serial port interface output hardware pins(0, 1, 2, 3) when pin is in GPIO mode (see <b>#V24CFG</b> ): 0 - Low 1 - High	
	Note: if <state> is omitted the command returns the actual state of the pin <pin>.
<b>AT#V24?</b>	Read command returns actual state for all the pins (either output and input) in the format:  <b>#V24: &lt;pin1&gt;,&lt;state1&gt;[&lt;CR&gt;&lt;LF&gt;</b> <b>#V24: &lt;pin2&gt;,&lt;state2&gt;[...]</b> <p>where</p> <b>&lt;pinn&gt;</b> - AT command serial port interface HW pin <b>&lt;staten&gt;</b> - AT commands serial port interface hardware pin state
<b>AT#V24=?</b>	Test command reports supported range of values for parameters <pin> and <state>.

### 3.5.7.1.35. RF Transmission Monitor Mode - #TXMONMODE

#TXMONMODE- RF Transmission Monitor Mode	SELINT 2
<b>AT#TXMONMODE=&lt;mode&gt;</b>  Set TXMON pin behaviour.  Parameter: <b>&lt;mode&gt;</b> 0 - <b>TXMON</b> pin goes high when a call is started and it drops down when the call is ended. It also goes high when a location update starts, and it drops down when the location update procedure stops. Finally it goes high during SMS transmission and receiving. Even if the <b>TXMON</b> in this case is set as <b>GPIO</b> in	

#TXMONMODE- RF Transmission Monitor Mode		SELINT 2
	<p>output, the read command <b>AT#GPIO=5,2</b> returns <b>#GPIO:2,0</b>, as the GPIO is in alternate mode.</p> <p>1 - <b>TXMON</b> is set in alternate mode and the Timer unit controls its state. <b>TXMON</b> goes high 200µs before <b>TXEN</b> goes high. Then power ramps start raising and there is the burst transmission. Finally <b>TXMON</b> drops down 47µs after power ramps stop falling down. This behaviour is repeated for every transmission burst.</p> <p>Note: if user sets GPIO 5 as input or output the TXMON does not follow the above behaviour.</p> <p>Note: if &lt;mode&gt; is change during a call from 1 to 0, TXMON goes down. If it is restored to 1, TXMON behaves as usual, following the bursts.</p>	
<b>AT#TXMONMODE?</b>	Read command reports the <mode> parameter set value, in the format:	
	<b>#TXMONMODE: &lt;mode&gt;</b>	
<b>AT#TXMONMODE=?</b>	Test command reports the supported values for <mode> parameter.	

### 3.5.7.1.36. Battery And Charger Status - #CBC

#CBC- Battery And Charger Status		SELINT 0 / 1
<b>AT#CBC</b>	Execution command returns the current Battery and Charger state in the format:  <b>#CBC: &lt;ChargerState&gt;,&lt;BatteryVoltage&gt;</b>  where: <b>&lt;ChargerState&gt;</b> - battery charger state 0 - charger not connected 1 - charger connected and charging 2 - charger connected and charge completed <b>&lt;BatteryVoltage&gt;</b> - battery voltage in units of ten millivolts: it is the real battery voltage only if charger is not connected; if the charger is connected this value depends on the charger voltage.	
<b>AT#CBC?</b>	Read command has the same meaning as Execution command.	
<b>AT#CBC=?</b>	Test command returns the <b>OK</b> result code.	

#CBC- Battery And Charger Status		SELINT 2
<b>AT#CBC</b>	Execution command returns the current Battery and Charger state in the format:  <b>#CBC: &lt;ChargerState&gt;,&lt;BatteryVoltage&gt;</b>  where: <b>&lt;ChargerState&gt;</b> - battery charger state 0 - charger not connected	

#CBC- Battery And Charger Status		SELINT 2
	<p>1 - charger connected and charging          2 - charger connected and charge completed  <b>&lt;BatteryVoltage&gt;</b> - battery voltage in units of ten millivolts: it is the real battery voltage only if charger is not connected; if the charger is connected this value depends on the charger voltage.</p>	
AT#CBC=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.1.37. GPRS Auto-Attach Property - #AUTOATT

#AUTOATT - Auto-Attach Property		SELINT 0 / 1
AT#AUTOATT [=<auto>]	<p>Set command enables/disables the TE GPRS auto-attach property when the module is in GPRS class B (see AT+CGCLASS).</p> <p>Parameter:  <b>&lt;auto&gt;</b></p> <p>0 - disables GPRS auto-attach property          1 - enables GPRS auto-attach property (factory default): after the command <b>#AUTOATT=1</b> has been issued (and at every following startup) the terminal will automatically try to attach to the GPRS service.</p> <p>Note: If parameter is omitted then the behaviour of Set command is the same as Read command.</p>	
AT#AUTOATT?	Read command reports whether the auto-attach property is currently enabled or not, in the format:	
	<b>#AUTOATT: &lt;auto&gt;</b>	
AT#AUTOATT=?	Test command reports available values for parameter <b>&lt;auto&gt;</b> .	

#AUTOATT - Auto-Attach Property		SELINT 2
AT#AUTOATT= [<auto>]	<p>Set command enables/disables the TE GPRS auto-attach property when the module is in GPRS class B (see AT+CGCLASS).</p> <p>Parameter:  <b>&lt;auto&gt;</b></p> <p>0 - disables GPRS auto-attach property          1 - enables GPRS auto-attach property (factory default): after the command <b>#AUTOATT=1</b> has been issued (and at every following startup) the terminal will automatically try to attach to the GPRS service.</p>	
AT#AUTOATT?	Read command reports whether the auto-attach property is currently enabled or not, in the format:	
	<b>#AUTOATT: &lt;auto&gt;</b>	
AT#AUTOATT=?	Test command reports available values for parameter <b>&lt;auto&gt;</b> .	

### 3.5.7.1.38. Multislot Class Control - #MSCLASS

#MSCLASS - Multislot Class Control		SELINT 0 / 1
AT#MSCLASS[= <class>[, <autoattach>]]	<p>Set command sets the multislot class</p> <p>Parameters:</p> <p>&lt;class&gt; - multislot class; take care: class 7 is not supported.</p> <p>1..6 - GPRS class 8..10 - GPRS class</p> <p>&lt;autoattach&gt;</p> <p>0 - the new multislot class is enabled only at the next detach/attach or after a reboot. 1 - the new multislot class is enabled immediately, automatically forcing a detach / attach procedure.</p> <p>Note: if all parameters are omitted the behaviour of set command is the same as read command.</p>	
AT#MSCLASS?	Read command reports the current value of the multislot class in the format:  #MSCLASS: <class>	
AT#MSCLASS=?	Test command reports the range of available values for parameter <class>.	

#MSCLASS - Multislot Class Control		SELINT 2
AT#MSCLASS[= <class>[, <autoattach>]]	<p>Set command sets the multislot class</p> <p>Parameters:</p> <p>&lt;class&gt; - multislot class; take care: class 7 is not supported.</p> <p>1..6 - GPRS class 8..10 - GPRS class</p> <p>&lt;autoattach&gt;</p> <p>0 - the new multislot class is enabled only at the next detach/attach or after a reboot. 1 - the new multislot class is enabled immediately, automatically forcing a detach / attach procedure.</p>	
AT#MSCLASS?	Read command reports the current value of the multislot class in the format:  #MSCLASS: <class>	
AT#MSCLASS=?	Test command reports the range of available values for both parameters <class> and <autoattach>.	

### 3.5.7.1.39. Cell Monitor - #MONI

#MONI - Cell Monitor		SELINT 0 / 1
AT#MONI[= <number>]]	<p>#MONI is both a set and an execution command.</p> <p>Set command sets one cell out of seven, in the neighbour list of the serving cell including it, from which we extract GSM-related information.</p> <p>Parameter:</p> <p>&lt;number&gt;</p> <p>0..6 - it is the ordinal number of a cell, in the neighbour list of the serving cell (default 0, serving cell).</p> <p>7 - it is a special request to obtain GSM-related informations from the whole set of seven cells in the neighbour list of the serving cell.</p> <p>Note: issuing AT#MONI&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT#MONI=&lt;CR&gt; is the same as issuing the command AT#MONI=0&lt;CR&gt;.</p>	
AT#MONI?	<p>Execution command reports GSM-related informations for selected cell and dedicated channel (if exists).</p> <p>a) When extracting data for the serving cell and the network name is known the format is:  <b>#MONI: &lt;netname&gt; BSIC:&lt;bsic&gt; RxQual:&lt;qual&gt; LAC:&lt;lac&gt; Id:&lt;id&gt; ARFCN:&lt;arfcn&gt; PWR:&lt;dBm&gt; dBm TA: &lt;timadv&gt;</b></p> <p>b) When the network name is unknown, the format is:  <b>#MONI: &lt;cc&gt; &lt;nc&gt; BSIC:&lt;bsic&gt; RxQual:&lt;qual&gt; LAC:&lt;lac&gt; Id:&lt;id&gt; ARFCN:&lt;arfcn&gt; PWR:&lt;dBm&gt; dBm TA: &lt;timadv&gt;</b></p> <p>c) When extracting data for an adjacent cell, the format is:  <b>#MONI: Adj Cell&lt;n&gt; [LAC:&lt;lac&gt; Id:&lt;id&gt;] ARFCN:&lt;arfcn&gt; PWR:&lt;dBm&gt; dBm</b></p> <p>where:</p> <p>&lt;netname&gt; - name of network operator</p> <p>&lt;cc&gt; - country code</p> <p>&lt;nc&gt; - network operator code</p> <p>&lt;n&gt; - progressive number of adjacent cell</p> <p>&lt;bsic&gt; - base station identification code</p> <p>&lt;qual&gt; - quality of reception 0..7</p> <p>&lt;lac&gt; - localization area code</p> <p>&lt;id&gt; - cell identifier</p> <p>&lt;arfcn&gt; - assigned radio channel</p>	

#MONI - Cell Monitor	SELINT 0 / 1
	<p>&lt;dBm&gt; - received signal strength in dBm      &lt;timadv&gt; - timing advance</p> <p>Note: TA: &lt;timadv&gt; is reported only for the serving cell.</p> <ol style="list-style-type: none"> <li>1. If the last setting done by #MONI is <b>7</b>, the execution command produces a table-like formatted output, as follows:       <ol style="list-style-type: none"> <li>a. First row reports the identifying name of the ‘columns’  <b>#MONI:</b>  <b>Cell BSIC LAC CellId ARFCN Power C1 C2 TA RxQual PL MN&lt;CR&gt;&lt;LF&gt;</b> </li> <li>b. Second row reports a complete set of GSM-related information for the serving cell:  <b>#MONI:</b>  <b>S: &lt;bsic&gt; &lt;lac&gt; &lt;id&gt; &lt;arfcn&gt; &lt;dBm&gt; &lt;C1value&gt; &lt;C2value&gt; &lt;timadv&gt; &lt;qual&gt; &lt;netname&gt;&lt;CR&gt;&lt;LF&gt;</b> </li> <li>c. 3<sup>rd</sup> to 8<sup>th</sup> rows report a reduced set of GSM-related information for the cells in the neighbours:  <b>#MONI:</b>  <b>N&lt;n&gt; &lt;bsic&gt; &lt;lac&gt; &lt;id&gt; &lt;arfcn&gt; &lt;dBm&gt; &lt;C1value&gt; &lt;C2value&gt;[&lt;CR&gt;&lt;LF&gt;]</b> </li> </ol> <p>where:  <b>&lt;C1value&gt;</b> - C1 reselection parameter  <b>&lt;C2value&gt;</b> - C2 reselection parameter  <i>other parameters as before</i></p> </li> </ol>
AT#MONI=?	<p>Test command reports the maximum number of cells, in the neighbour list of the serving cell, from which we can extract GSM-related informations, along with the ordinal number of the current selected cell, in the format:</p> <p><b>#MONI: (&lt;MaxCellNo&gt;,&lt;CellSet&gt;)</b></p> <p>where:  <b>&lt;MaxCellNo&gt;</b> - maximum number of cells, in the neighbour list of the serving cell, from which we can extract GSM-related informations (for compatibility with previous versions of code this value is always <b>5</b>).  <b>&lt;CellSet&gt;</b> - the last setting done with command #MONI.</p> <p>An enhanced version of the Test command has been defined:  <b>AT#MONI=??</b></p> <p>Note: The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.</p>

#MONI - Cell Monitor	SELINT 0 / 1
AT#MONI=?	<p>Enhanced test command reports the maximum number of cells, in a the neighbour list of the serving cell and including it, from which we can extract GSM-related informations, along with the ordinal number of the current selected cell, in the format:</p> <p><b>#MONI: (&lt;MaxCellNo&gt;,&lt;CellSet&gt;)</b></p> <p>where:</p> <p>&lt;MaxCellNo&gt; - maximum number of cells, in a-the neighbour list of the serving cell and including it, from which we can extract GSM-related informations. This value is always 7.</p> <p>&lt;CellSet&gt; - the last setting done with command #MONI.</p> <p>Note: The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.</p>
Example	<p><i>Set command selects the cell 0</i>  at#moni=0  OK</p> <p><i>Execution command reports GSM-related information for cell 0</i>  at#moni  #MONI: I WIND BSIC:70 RxQual:0 LAC:55FA Id:1D23 ARFCN:736 PWR:-83dbm TA:1  OK</p> <p><i>Set command selects the special request to obtain GSM-related information from the whole set of seven cells in the neighbour list of the serving cell</i>  at#moni=7  OK</p> <p><i>Execution command reports the requested information in table-like format</i>  at#moni  #MONI: Cell BSIC LAC CellId ARFCN Power C1 C2 TA RxQual PLMN  #MONI: S 70 55FA 1D23 736 -83dbm 19 33 1 0 I WIND  #MONI: N1 75 55FA 1297 983 -78dbm 26 20  #MONI: N2 72 55FA 1289 976 -82dbm 22 16  #MONI: N3 70 55FA 1D15 749 -92dbm 10 18  #MONI: N4 72 55FA 1D0D 751 -92dbm 10 18  #MONI: N5 75 55FA 1296 978 -95dbm 9 3  #MONI: N6 70 55FA 1D77 756 -99dbm 3 11  OK</p>
Note	The refresh time of the measures is preset to 3 sec. The timing advance value is meaningful only during calls or GPRS transfers active.
Note	The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.

#MONI - Cell Monitor	SELINT 2
AT#MONI[=	#MONI is both a set and an execution command.

#MONI - Cell Monitor	SELINT 2
[<number>]]	<p>Set command sets one cell out of seven, in a the neighbour list of the serving cell including it, from which extract GSM-related information.</p> <p>Parameter:</p> <p>&lt;number&gt;</p> <p>0..6 - it is the ordinal number of the cell, in a-the neighbour list of the serving cell (default 0, serving cell).      7 - it is a special request to obtain GSM-related information from the whole set of seven cells in the neighbour list of the serving cell.</p> <p>Execution command (<b>AT#MONI&lt;CR&gt;</b>) reports GSM-related information for selected cell and dedicated channel (if exists).</p> <p>2. If the last setting done by #MONI is in the range [0..6], the output format is as follows:</p> <p>d) When extracting data for the serving cell and the network name is known the format is:  <b>#MONI: &lt;netname&gt; BSIC:&lt;bsic&gt; RxQual:&lt;qual&gt; LAC:&lt;lac&gt; Id:&lt;id&gt; ARFCN:&lt;arfcn&gt; PWR:&lt;dBm&gt; dBm TA: &lt;timadv&gt;</b></p> <p>e) When the network name is unknown, the format is:  <b>#MONI: &lt;cc&gt; &lt;nc&gt; BSIC:&lt;bsic&gt; RxQual:&lt;qual&gt; LAC:&lt;lac&gt; Id:&lt;id&gt; ARFCN:&lt;arfcn&gt; PWR:&lt;dBm&gt; dBm TA: &lt;timadv&gt;</b></p> <p>f) When extracting data for an adjacent cell, the format is:  <b>#MONI: Adj Cell&lt;n&gt; [LAC:&lt;lac&gt; Id:&lt;id&gt;] ARFCN:&lt;arfcn&gt; PWR:&lt;dBm&gt; dBm</b></p> <p>where:</p> <p>&lt;netname&gt; - name of network operator      &lt;cc&gt; - country code      &lt;nc&gt; - network operator code      &lt;n&gt; - progressive number of adjacent cell      &lt;bsic&gt; - base station identification code      &lt;qual&gt; - quality of reception      0..7      &lt;lac&gt; - localization area code      &lt;id&gt; - cell identifier      &lt;arfcn&gt; - assigned radio channel      &lt;dBm&gt; - received signal strength in dBm      &lt;timadv&gt; - timing advance</p> <p>Note: TA: &lt;timadv&gt; is reported only for the serving cell.</p>

#MONI - Cell Monitor	SELINT 2
	<p>3. If the last setting done by #MONI is 7, the execution command produces a table-like formatted output, as follows:</p> <p>a. First row reports the identifying name of the ‘columns’  <b>#MONI:</b>  <b>Cell BSIC LAC CellId ARFCN Power C1 C2 TA RxQual PL MN&lt;CR&gt;&lt;LF&gt;</b></p> <p>b. Second row reports a complete set of GSM-related information for the serving cell:  <b>#MONI:</b>  <b>S: &lt;bsic&gt; &lt;lac&gt; &lt;id&gt; &lt;arfcn&gt; &lt;dBm&gt; &lt;C1value&gt; &lt;C2value&gt; &lt;timadv&gt; &lt;qual&gt; &lt;netname&gt;&lt;CR&gt;&lt;LF&gt;</b></p> <p>c. 3<sup>rd</sup> to 8<sup>th</sup> rows report a reduced set of GSM-related information for the cells in the neighbours:  <b>#MONI:</b>  <b>N&lt;n&gt; &lt;bsic&gt; &lt;lac&gt; &lt;id&gt; &lt;arfcn&gt; &lt;dBm&gt; &lt;C1value&gt; &lt;C2value&gt;[&lt;CR&gt;&lt;LF&gt;]</b></p> <p>where:  <b>&lt;C1value&gt;</b> - C1 reselection parameter  <b>&lt;C2value&gt;</b> - C2 reselection parameter  <i>other parameters as before</i></p>
AT#MONI=?	<p>Test command reports the maximum number of cells, in a-the neighbour list of the serving cell excluding it, from which we can extract GSM-related informations, along with the ordinal number of the current selected cell, in the format:</p> <p><b>#MONI: (&lt;MaxCellNo&gt;,&lt;CellSet&gt;)</b></p> <p>where:  <b>&lt;MaxCellNo&gt;</b> - maximum number of cells, in a-the neighbour list of the serving cell and excluding it, from which we can extract GSM-related informations. This value is always 6.  <b>&lt;CellSet&gt;</b> - the last setting done with command #MONI.</p>
Example	<p><i>Set command selects the cell 0</i></p> <p>at#moni=0  OK</p> <p><i>Execution command reports GSM-related information for cell 0</i></p> <p>at#moni  #MONI: I WIND BSIC:70 RxQual:0 LAC:55FA Id:1D23 ARFCN:736 PWR:-83dbm TA:1  OK</p> <p><i>Set command selects the special request to obtain GSM-related information from the whole set of seven cells in the neighbour list of the serving cell</i></p>

#MONI - Cell Monitor	SELINT 2
	<p>at#moni=7 OK</p> <p><i>Execution command reports the requested information in table-like format</i></p> <pre>at#moni #MONI: Cell BSIC LAC CellId ARFCN Power C1 C2 TA RxQual PLMN #MONI: S 70 55FA 1D23 736 -83dbm 19 33 1 0 I WIND #MONI: N1 75 55FA 1297 983 -78dbm 26 20 #MONI: N2 72 55FA 1289 976 -82dbm 22 16 #MONI: N3 70 55FA 1D15 749 -92dbm 10 18 #MONI: N4 72 55FA 1D0D 751 -92dbm 10 18 #MONI: N5 75 55FA 1296 978 -95dbm 9 3 #MONI: N6 70 55FA 1D77 756 -99dbm 3 11</pre> <p>OK</p>
Note	The refresh time of the measures is preset to 3 sec. The timing advance value is meaningful only during calls or GPRS transfers active.
Note	The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.

### 3.5.7.1.40. Serving Cell Information - #SERVINFO

#SERVINFO - Serving Cell Information	SELINT 0 / 1
AT#SERVINFO	<p>Execution command reports information about serving cell, in the format:</p> <pre>#SERVINFO: &lt;B-ARFCN&gt;,&lt;dBm&gt;,&lt;NetNameAsc&gt;,&lt;NetCode&gt;, &lt;BSIC&gt;,&lt;LAC&gt;,&lt;TA&gt;,&lt;GPRS&gt;,[&lt;PB-ARFCN&gt;],[&lt;NOM&gt;], &lt;RAC&gt;[,&lt;PAT&gt;]]</pre> <p>where:</p> <ul style="list-style-type: none"> <li>&lt;B-ARFCN&gt; - BCCH ARFCN of the serving cell</li> <li>&lt;dBm&gt; - received signal strength in dBm</li> <li>&lt;NetNameAsc&gt; - operator name, quoted string type</li> <li>&lt;NetCode&gt; - string representing the network operator in numeric format: 5 or 6 digits [country code (3) + network code (2 or 3)]</li> <li>&lt;BSIC&gt; - Base Station Identification Code</li> <li>&lt;LAC&gt; - Localization Area Code</li> <li>&lt;TA&gt; - Time Advance: it's available only if a GSM or GPRS is running</li> <li>&lt;GPRS&gt; - GPRS supported in the cell             <ul style="list-style-type: none"> <li>0 - not supported</li> <li>1 - supported</li> </ul> </li> </ul> <p>The following information will be present only if GPRS is supported in the cell</p> <p>&lt;PB-ARFCN&gt; -</p>

#SERVINFO - Serving Cell Information		SELINT 0 / 1
	<ul style="list-style-type: none"> <li>• if PBCCH is supported by the cell           <ul style="list-style-type: none"> <li>◦ if its content is the PBCCH ARFCN of the serving cell, then &lt;PB-ARFCN&gt; is available</li> <li>◦ else the label “hopping” will be printed</li> </ul> </li> <li>• else &lt;PB-ARFCN&gt; is not available</li> </ul> <p>&lt;NOM&gt; - Network Operation Mode</p> <p>”I” ”II” ”III”</p> <p>&lt;RAC&gt; - Routing Area ColoUr Code</p> <p>&lt;PAT&gt; - Priority Access Threshold</p> <p>0 3..6</p> <p>Note: during a call, a SMS sending/receiving or a location update the values of &lt;GPRS&gt;, &lt;PB-ARFCN&gt;, &lt;NOM&gt;, &lt;RAC&gt; and &lt;PAT&gt; parameters don't make sense.</p>	
AT#SERVINFO?	Read command has the same effect as Execution command	
AT#SERVINFO=?	Test command tests for command existence (available only for 10.0x.xx5 and following versions)	

#SERVINFO - Serving Cell Information		SELINT 2
AT#SERVINFO	<p>Execution command reports information about serving cell, in the format:</p> <p><b>#SERVINFO: &lt;B-ARFCN&gt;,&lt;dBm&gt;,&lt;NetNameAsc&gt;,&lt;NetCode&gt;,&lt;BSIC&gt;,&lt;LAC&gt;,&lt;TA&gt;,&lt;GPRS&gt;[,&lt;PB-ARFCN&gt;],[&lt;NOM&gt;],&lt;RAC&gt;[,&lt;PAT&gt;]]</b></p> <p>where:</p> <p>&lt;B-ARFCN&gt; - BCCH ARFCN of the serving cell</p> <p>&lt;dBm&gt; - received signal strength in dBm</p> <p>&lt;NetNameAsc&gt; - operator name, quoted string type</p> <p>&lt;NetCode&gt; - string representing the network operator in numeric format: 5 or 6 digits [country code (3) + network code (2 or 3)]</p> <p>&lt;BSIC&gt; - Base Station Identification Code</p> <p>&lt;LAC&gt; - Localization Area Code</p> <p>&lt;TA&gt; - Time Advance: it's available only if a GSM or GPRS is running</p> <p>&lt;GPRS&gt; - GPRS supported in the cell</p> <p>0 - not supported 1 - supported</p> <p>The following information will be present only if GPRS is supported in the cell</p> <p>&lt;PB-ARFCN&gt; -</p>	

#SERVINFO - Serving Cell Information	SELINT 2
	<ul style="list-style-type: none"> <li>• if PBCCH is supported by the cell           <ul style="list-style-type: none"> <li>◦ if its content is the PBCCH ARFCN of the serving cell, then &lt;PB-ARFCN&gt; is available</li> <li>◦ else the label “hopping” will be printed</li> </ul> </li> <li>• else &lt;PB-ARFCN&gt; is not available</li> </ul> <p>&lt;NOM&gt; - Network Operation Mode</p> <p>”I” ”II” ”III”</p> <p>&lt;RAC&gt; - Routing Area Colour Code</p> <p>&lt;PAT&gt; - Priority Access Threshold</p> <p>0 3..6</p> <p>Note: during a call, a SMS sending/receiving or a location update the values of &lt;GPRS&gt;, &lt;PB-ARFCN&gt;, &lt;NOM&gt;, &lt;RAC&gt; and &lt;PAT&gt; parameters don't make sense.</p>
AT#SERVINFO=?	Test command tests for command existence (available only for 10.0x.xx5 and following versions)

### 3.5.7.1.41. Network Survey Of Timing Advance - #CSURVTA

#CSURVTA – Network Survey Of Timing Advance	SELINT 2
AT#CSURVTA=<ch1>,[<ch2>,...[,<chn>>]]]	<p>Execution command allows to perform a quick survey of timing advance through the given channels.</p> <p>Parameters:</p> <p>&lt;chn&gt; - channel number (arfcn)</p> <p>After issuing the command the device responds with the string:</p> <p><b>Network survey started...</b></p> <p>and, after a while, a list of timing advance values, one for each received carrier, is reported, each of them in the format:</p> <p><b>arfcn: &lt;arfcn&gt; TA: &lt;TAValue&gt;&lt;CR&gt;&lt;LF&gt;&lt;CR&gt;&lt;LF&gt;&lt;CR&gt;&lt;LF&gt;</b></p> <p>where:</p> <p>&lt;arfcn&gt; - decimal number; it is the RF channel</p> <p>&lt;TAValue&gt; - decimal number; it is the timing advance value in bit periods (1 bit period = 48/13 µs); the range of this value is 0-63; this value is -1 if time advance measurement fails</p>

	<p>Lastly, the #CSURVTA output ends in two ways, depending on the last #CSURVF setting:</p> <p style="text-align: center;">if #CSURVF=0 or #CSURVF=1</p> <p>The output ends with the string:</p> <p><b>Network survey ended</b></p> <p style="text-align: center;">if #CSURVF=2</p> <p>the output ends with the string:</p> <p><b>Network survey ended (Carrier: &lt;NoARFCN&gt; BCCh: 0)</b></p> <p>where</p> <p>&lt;NoARFCN&gt; - number of scanned frequencies</p> <p>Note: the maximum number of channels is 20.</p> <p>Note: during the execution of this command calls and sms, either incoming or outgoing, are not supported.</p> <p>Note: after the end of this command it is strongly suggested to wait at least 5 seconds before sending other AT commands.</p> <p>Note: this command can only be executed when mobile is in idle state.</p> <p>Note: it is possible to measure timing advance of cells that do not belong to current selected PLMN or current neighbour cell list.</p> <p>Note: if serving cell timing advance is needed, it is strongly suggested to measure its timing advance with this command, adding serving cell ARFCN to the list, in order to have even measures.</p> <p>Note: the command may be aborted and return ERROR in case of higher priority protocol stack event.</p> <p>Note: AT#CSURVNLF configuration affects this command behaviour.</p> <p>Note: AT#CSURVEXT configuration does not affect this command behaviour.</p>
<b>AT#CSURVTA=?</b>	Test command response is OK.
Example	AT#CSURVTA=9,7,4

	<p>Network survey started ...</p> <p>arfcn: 9 TA: 2</p> <p>arfcn: 7 TA: 11</p> <p>arfcn: 4 TA: 2</p> <p>Network survey ended</p> <p>OK</p>
--	--

### 3.5.7.1.42. +COPS Mode - #COPSMODE

#COPSMODE - +COPS Mode	SELINT 0 / 1
<b>AT#COPSMODE [=&lt;mode&gt;]</b>	<p>Set command sets the behaviour of +COPS command (<i>see +COPS</i>).</p> <p>Parameter:  <b>&lt;mode&gt;</b></p> <p>0 - +COPS behaviour like former GM862 family products (default)      1 - +COPS behaviour compliant with ETSI format</p> <p>Note: The setting is saved in NVM (and available on following reboot).</p> <p>Note: if parameter &lt;mode&gt; is omitted the behaviour of Set command is the same as Read command.</p>
<b>AT#COPSMODE?</b>	<p>Read command returns the current behaviour of +COPS command, in the format:</p> <p><b>#COPSMODE: &lt;mode&gt;</b></p> <p>where  <b>&lt;mode&gt;</b> - +COPS behaviour as seen before.</p>
<b>AT#COPSMODE=?</b>	Test command returns the range of available values for parameter <mode>.
Note	It's suggested to reboot the module after every #COPSMODE setting.

### 3.5.7.1.43. Query SIM Status - #QSS

#QSS - Query SIM Status	SELINT 0 / 1
-------------------------	--------------

#QSS - Query SIM Status		SELINT 0 / 1
AT#QSS[= [<mode>]]	<p>Set command enables/disables the Query SIM Status unsolicited indication in the ME.</p> <p>Parameter:  <b>&lt;mode&gt;</b> - type of notification            0 - disabled (factory default); it's possible only to query the current SIM status through Read command AT#QSS?            1 - enabled; the ME informs at every SIM status change through the following unsolicited indication:</p> <p><b>#QSS: &lt;status&gt;</b></p> <p>where:  <b>&lt;status&gt;</b> - current SIM status            0 - SIM NOT INSERTED            1 - SIM INSERTED</p>	
AT#QSS?	<p>Note: issuing AT#QSS&lt;CR&gt; is the same as issuing the Read command.</p> <p>Read command reports whether the unsolicited indication #QSS is currently enabled or not, along with the SIM status, in the format:</p> <p><b>#QSS: &lt;mode&gt;,&lt;status&gt;</b>            (&lt;mode&gt; and &lt;status&gt; are described above)</p>	
AT#QSS=?	Test command returns the supported range of values for parameter <mode>.	

#QSS - Query SIM Status		SELINT 2
AT#QSS= [<mode>]	<p>Set command enables/disables the Query SIM Status unsolicited indication in the ME.</p> <p>Parameter:  <b>&lt;mode&gt;</b> - type of notification            0 - disabled (factory default); it's possible only to query the current SIM status through Read command AT#QSS?            1 - enabled; the ME informs at every SIM status change through the following basic unsolicited indication:</p> <p><b>#QSS: &lt;status&gt;</b></p> <p>where:  <b>&lt;status&gt;</b> - current SIM status            0 - SIM NOT INSERTED            1 - SIM INSERTED</p> <p>2 - enabled; the ME informs at every SIM status change through the following unsolicited indication:</p>	

#QSS - Query SIM Status	SELINT 2
	<p><b>#QSS: &lt;status&gt;</b></p> <p>where:  <b>&lt;status&gt;</b> - current SIM status          0 - SIM NOT INSERTED          1 - SIM INSERTED          2 - SIM INSERTED and PIN UNLOCKED          3 - SIM INSERTED and READY (SMS and Phonebook access are possible).</p> <p>Note: the command reports the SIM status change after the &lt;mode&gt; has been set to 2. We suggest to set &lt;mode&gt;=2 and save the value in the user profile, then power off the module. The proper SIM status will be available at the next power on.</p>
AT#QSS?	Read command reports whether the unsolicited indication #QSS is currently enabled or not, along with the SIM status, in the format:  <b>#QSS: &lt;mode&gt;,&lt;status&gt;</b> (<mode> and <status> are described above)
AT#QSS=?	Test command returns the supported range of values for parameter <mode>.

### 3.5.7.1.44. ATD Dialing Mode - #DIALMODE

#DIALMODE - ATD Dialing Mode	SELINT 0 / 1
AT#DIALMODE[=<mode>]	<p>Set command sets ATD modality.</p> <p>Parameter:  <b>&lt;mode&gt;</b></p> <p>0 - (voice call only) <b>OK</b> result code is received as soon as it starts remotely ringing (factory default)          1 - (voice call only) <b>OK</b> result code is received only after the called party answers. Any character typed aborts the call and <b>NO CARRIER</b> result code is received.          2 - (voice call and data call) the following custom result codes are received, monitoring step by step the call status:</p> <ul style="list-style-type: none"> <li><b>DIALING</b> (MO in progress)</li> <li><b>RINGING</b> (remote ring)</li> <li><b>CONNECTED</b> (remote call accepted)</li> <li><b>RELEASED</b> (after ATH)</li> <li><b>DISCONNECTED</b> (remote hang-up)</li> </ul> <p>Note: The setting is saved in NVM and available on following reboot.</p> <p>Note: In case a <b>BUSY</b> tone is received and at the same time <b>ATX0</b> is enabled ATD will return <b>NO CARRIER</b> instead of <b>DISCONNECTED</b>.</p>

#DIALMODE - ATD Dialing Mode		SELINT 0 / 1
	Note: if parameter <mode> is omitted the behaviour of Set command is the same as Read command.	
AT#DIALMODE?	Read command returns current <b>ATD</b> dialing mode in the format:  #DIALMODE: <mode>	
AT#DIALMODE=?	Test command returns the range of values for parameter <mode>	

#DIALMODE - Dialing Mode		SELINT 2
AT#DIALMODE= [<mode>]	Set command sets dialing modality.  Parameter: <b>&lt;mode&gt;</b> 0 - (voice call only) <b>OK</b> result code is received as soon as it starts remotely ringing (factory default) 1 – (voice call only) <b>OK</b> result code is received only after the called party answers. Any character typed aborts the call and <b>OK</b> result code is received. 2 - (voice call and data call) the following custom result codes are received, monitoring step by step the call status:  <b>DIALING</b> (MO in progress) <b>RINGING</b> (remote ring) <b>CONNECTED</b> (remote call accepted) <b>RELEASED</b> (after <b>ATH</b> ) <b>DISCONNECTED</b> (remote hang-up)	
	Note: In case a <b>BUSY</b> tone is received and at the same time <b>ATX0</b> is enabled <b>ATD</b> will return <b>NO CARRIER</b> instead of <b>DISCONNECTED</b> .	
	Note: The setting is saved in NVM and available on following reboot.	
AT#DIALMODE?	Read command returns current <b>ATD</b> dialing mode in the format:  #DIALMODE: <mode>	
AT#DIALMODE=?	Test command returns the range of values for parameter <mode>	

### 3.5.7.1.45. Automatic Call - #ACAL

#ACAL - Automatic Call		SELINT 0 / 1
AT#ACAL[= [<mode>]]	Set command enables/disables the automatic call function.  Parameter: <b>&lt;mode&gt;</b> 0 - disables the automatic call function (factory default) 1 - enables the automatic call function. If enabled (and <b>&amp;D2</b> has been issued), the transition <b>OFF/ON</b> of <b>DTR</b> causes an automatic call to the first number (position 0) stored in the internal phonebook.	

#ACAL - Automatic Call		SELINT 0 / 1
	Note: type of call depends on the last issue of command +FCLASS.  Note: issuing AT#ACAL<CR> is the same as issuing the Read command.	
AT#ACAL?	Read command reports whether the automatic call function is currently enabled or not, in the format:  <b>#ACAL: &lt;mode&gt;</b>	
AT#ACAL=?	Test command returns the supported range of values for parameter <mode>.	
Note	See <b>&amp;Z</b> to write and <b>&amp;N</b> to read the number on module internal phonebook.	

#ACAL - Automatic Call		SELINT 2
AT#ACAL= [<mode>]	Set command enables/disables the automatic call function.  Parameter: <b>&lt;mode&gt;</b> 0 - disables the automatic call function (factory default) 1 - enables the automatic call function. If enabled (and <b>&amp;D2</b> has been issued), the transition <b>OFF/ON</b> of <b>DTR</b> causes an automatic call to the first number (position 0) stored in the internal phonebook.  Note: type of call depends on the last issue of command +FCLASS.	
AT#ACAL?	Read command reports whether the automatic call function is currently enabled or not, in the format:  <b>#ACAL: &lt;mode&gt;</b>  Note: as a consequence of the introduction of the command #ACALEXT (Extended Automatic Call) it is possible that the Read Command returns a value supported by #ACALEXT but <b>NOT</b> supported by #ACAL.  <b>AT#ACAL?</b> <b>#ACAL : 2</b>  <b>OK</b>  Due to this possible situation it is strongly recommended not to use contemporaneously both commands.	
AT#ACAL=?	Test command returns the supported range of values for parameter <mode>.	
Note	See <b>&amp;Z</b> to write and <b>&amp;N</b> to read the number on module internal phonebook.	

### 3.5.7.1.46. Extended Automatic Call - #ACALEXT

#ACALEXT - Extended Automatic Call		SELINT 0 / 1 / 2
AT#ACALEXT= <mode>,<index>	<p>Set command enables/disables the extended automatic call function.</p> <p>Parameters:</p> <p>&lt;mode&gt;</p> <ul style="list-style-type: none"> <li>0 - disables the automatic call function (factory default)</li> <li>1 - enables the automatic call function from “ME” phonebook.</li> <li>2 - enables the automatic call function from “SM” phonebook.</li> </ul> <p>&lt;index&gt; - it indicates a position in the currently selected phonebook.</p> <p>If the extended automatic call function is enabled and <b>&amp;D2</b> has been issued, the transition OFF/ON of <b>DTR</b> causes an automatic call to the number stored in position &lt;index&gt; in the selected phonebook.</p> <p>Note: type of call depends on the last issue of command <b>+FCLASS</b>.</p>	
AT#ACALEXT?	Read command reports either whether the automatic call function is currently enabled or not, and the last <index> setting in the format:	
	#ACALEXT: <mode>,<index>	
AT#ACALEXT=?	The range of available positions in a phonebook depends on the selected phonebook. This is the reason why the test command returns three ranges of values: the first for parameter <mode>, the second for parameter <index> when “ME” is the chosen phonebook, the third for parameter <index> when “SM” is the chosen phonebook.	
Note	Issuing #ACALEXT causes the #ACAL <mode> to be changed. Issuing AT#ACAL=1 causes the #ACALEXT <index> to be set to default. It is recommended to NOT use contemporaneously either #ACALEXT and #ACAL	
Note	See <b>&amp;Z</b> to write and <b>&amp;N</b> to read the number on module internal phonebook.	

### 3.5.7.1.47. Extended Call Monitoring - #ECAM

#ECAM - Extended Call Monitoring		SELINT 0 / 1
AT#ECAM[= [<onoff>]]	<p>This command enables/disables the call monitoring function in the <b>ME</b>.</p> <p>Parameter:</p> <p>&lt;onoff&gt;</p> <ul style="list-style-type: none"> <li>0 - disables call monitoring function (factory default)</li> <li>1 - enables call monitoring function; the <b>ME</b> informs about call events, such as incoming call, connected, hang up etc. using the following unsolicited indication:</li> </ul> <p>#ECAM: &lt;ccid&gt;,&lt;ccstatus&gt;,&lt;calltype&gt;,,,[&lt;number&gt;,&lt;type&gt;]</p>	

#ECAM - Extended Call Monitoring		SELINT 0 / 1
	<p>where</p> <p>&lt;ccid&gt; - call ID</p> <p>&lt;cstatus&gt; - call status</p> <ul style="list-style-type: none"> <li>0 - idle</li> <li>1 - calling (MO)</li> <li>2 - connecting (MO)</li> <li>3 - active</li> <li>4 - hold</li> <li>5 - waiting (MT)</li> <li>6 - alerting (MT)</li> <li>7 - busy</li> </ul> <p>&lt;calltype&gt; - call type</p> <ul style="list-style-type: none"> <li>1 - voice</li> <li>2 - data</li> </ul> <p>&lt;number&gt; - called number (valid only for &lt;cstatus&gt;=1)</p> <p>&lt;type&gt; - type of &lt;number&gt;</p> <ul style="list-style-type: none"> <li>129 - national number</li> <li>145 - international number</li> </ul> <p>Note: the unsolicited indication is sent along with usual codes (<b>OK</b>, <b>NO CARRIER</b>, <b>BUSY</b>...).</p> <p>Note: issuing <b>AT#ECAM&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT#ECAM=&lt;CR&gt;</b> returns the <b>OK</b> result code.</p>	
AT#ECAM?	Read command reports whether the extended call monitoring function is currently enabled or not, in the format:	
AT#ECAM=?	#ECAM: <onoff>	Test command returns the list of supported values for <onoff>

#ECAM - Extended Call Monitoring		SELINT 2
AT#ECAM= [<onoff>]	<p>This command enables/disables the call monitoring function in the ME.</p> <p>Parameter:</p> <p>&lt;onoff&gt;</p> <ul style="list-style-type: none"> <li>0 - disables call monitoring function (factory default)</li> <li>1 - enables call monitoring function; the ME informs about call events, such as incoming call, connected, hang up etc. using the following unsolicited indication:</li> </ul> <p>#ECAM: &lt;ccid&gt;,&lt;cstatus&gt;,&lt;calltype&gt;,,[&lt;number&gt;,&lt;type&gt;]</p> <p>where</p> <p>&lt;ccid&gt; - call ID</p>	

<b>#ECAM - Extended Call Monitoring</b>	<b>SELINT 2</b>
---	-----------------

<b>#ECAM - Extended Call Monitoring</b>	<b>SELINT 2</b>
	<p>&lt;ccstatus&gt; - call status          0 - idle          1 - calling (MO)          2 - connecting (MO)          3 - active          4 - hold          5 - waiting (MT)          6 - alerting (MT)          7 - busy</p> <p>&lt;calltype&gt; - call type          1 - voice          2 - data</p> <p>&lt;number&gt; - called number (valid only for &lt;ccstatus&gt;=1)</p> <p>&lt;type&gt; - type of &lt;number&gt;          129 - national number          145 - international number</p> <p>Note: the unsolicited indication is sent along with usual codes (<b>OK, NO CARRIER, BUSY...</b>).</p>
<b>AT#ECAM?</b>	Read command reports whether the extended call monitoring function is currently enabled or not, in the format:  <b>#ECAM: &lt;onoff&gt;</b>
<b>AT#ECAM=?</b>	Test command returns the list of supported values for <onoff>

### 3.5.7.1.48. SMS Overflow - #SMOV

<b>#SMOV - SMS Overflow</b>	<b>SELINT 0 / 1</b>
AT#SMOV[=<mode>]]	<p>Set command enables/disables the SMS overflow signalling function.</p> <p>Parameter:</p> <p>&lt;mode&gt;</p> <p>0 - disables SMS overflow signalling function(factory default)          1 - enables SMS overflow signalling function; when the maximum storage capacity has been reached, the following notification is sent:</p> <p><b>#SMOV: &lt;memo&gt;</b></p> <p>where &lt;memo&gt; is a string indicating the SMS storage that has reached maximum capacity:  <b>“SM” – SIM Memory</b></p> <p>Note: issuing AT#SMOV&lt;CR&gt; is the same as issuing the Read command.</p>

#SMOV - SMS Overflow		SELINT 0 / 1
	Note: issuing <b>AT#SMOV=&lt;CR&gt;</b> is the same as issuing the command <b>AT#SMOV=0&lt;CR&gt;</b> .	
<b>AT#SMOV?</b>	Read command reports whether the SMS overflow signalling function is currently enabled or not, in the format:  <b>#SMOV: &lt;mode&gt;</b>	
<b>AT#SMOV=?</b>	Test command returns the supported range of values of parameter <b>&lt;mode&gt;</b> .	

#SMOV - SMS Overflow		SELINT 2
<b>AT#SMOV=[&lt;mode&gt;]</b>	Set command enables/disables the SMS overflow signalling function.  Parameter: <b>&lt;mode&gt;</b> 0 - disables SMS overflow signalling function (factory default) 1 - enables SMS overflow signalling function; when the maximum storage capacity has been reached, the following network initiated notification is sent:  <b>#SMOV: &lt;memo&gt;</b>  <b>where &lt;memo&gt; is a string indicating the SMS storage that has reached maximum capacity:</b> <b>“SM” – SIM Memory</b>	
<b>AT#SMOV?</b>	Read command reports whether the SMS overflow signalling function is currently enabled or not, in the format:  <b>#SMOV: &lt;mode&gt;</b>	
<b>AT#SMOV=?</b>	Test command returns the supported range of values of parameter <b>&lt;mode&gt;</b> .	

### 3.5.7.1.49. Mailbox Numbers - #MBN

#MBN - Mailbox Numbers		SELINT 2
<b>AT#MBN</b>	Execution command returns the mailbox numbers stored on SIM, if this service is provided by the SIM.  The response format is: <b>[#MBN: &lt;index&gt;,&lt;number&gt;,&lt;type&gt;[,&lt;text&gt;][,mboxtpe][&lt;CR&gt;&lt;LF&gt;] #MBN: &lt;index&gt;,&lt;number&gt;,&lt;type&gt;[,&lt;text&gt;][,mboxtpe][...]]</b>  where: <b>&lt;index&gt;</b> - record number <b>&lt;number&gt;</b> - string type mailbox number in the format <b>&lt;type&gt;</b> <b>&lt;type&gt;</b> - type of mailbox number octet in integer format 129 - national numbering scheme 145 - international numbering scheme (contains the character "+")	

#MBN - Mailbox Numbers	SELINT 2
	<p>&lt;text&gt; - the alphanumeric text associated to the number; used character set should be the one selected with command +CSCS</p> <p>&lt;mboxtype&gt; - the message waiting group type of the mailbox, if available:          "VOICE" - voice          "FAX" - fax          "EMAIL" - electronic mail          "OTHER" - other</p> <p>Note: if all queried locations are empty (but available), no information text lines will be returned.</p>
AT#MBN=?	Test command returns the <b>OK</b> result code.

### 3.5.7.1.50. Message Waiting Indication - #MWI

#MWI - Message Waiting Indication	SELINT 2
<p>AT#MWI=&lt;enable&gt;</p> <p>Set command enables/disables the presentation of the <b>message waiting indicator</b> URC.</p> <p>Parameter:</p> <p>&lt;enable&gt;</p> <p>0 - disable the presentation of the #MWI URC          1 - enable the presentation of the #MWI URC each time a new message waiting indicator is received from the network and, at startup, the presentation of the status of the <b>message waiting indicators</b>, as they are currently stored on SIM..</p> <p>The URC format is:</p> <p>#MWI: &lt;status&gt;,&lt;indicator&gt;[,&lt;count&gt;]</p> <p>where:</p> <p>&lt;status&gt;</p> <p>0 - clear: it has been deleted one of the messages related to the indicator &lt;indicator&gt;.          1 - set: there's a new waiting message related to the indicator &lt;indicator&gt;          &lt;indicator&gt;</p> <p>1 - either Line 1 (CPHS context) or Voice (3GPP context)          2 - Line 2 (CPHS context only)          3 - Fax          4 - E-mail          5 - Other</p> <p>&lt;count&gt; - message counter: network information reporting the number of pending</p>	

#MWI - Message Waiting Indication	SELINT 2
	<p>messages related to the message waiting indicator &lt;indicator&gt;.</p> <p>The presentation at startup of the <b>message waiting indicators</b> status, as they are currently stored on SIM, is as follows:</p> <pre>#MWI: &lt;status&gt;[,&lt;indicator&gt;[,&lt;count&gt;][&lt;CR&gt;&lt;LF&gt; #MWI: &lt;status&gt;,&lt;indicator&gt;[,&lt;count&gt;][...]]]</pre> <p>where:</p> <p>&lt;status&gt;</p> <ul style="list-style-type: none"> <li>0 - no waiting message indicator is currently set: if this the case no other information is reported</li> <li>1 - there are waiting messages related to the message waiting indicator &lt;indicator&gt;.</li> </ul> <p>&lt;indicator&gt;</p> <ul style="list-style-type: none"> <li>1 - either Line 1 (CPHS context) or Voice (3GPP context)</li> <li>2 - Line 2 (CPHS context)</li> <li>3 - Fax</li> <li>4 - E-mail</li> <li>5 - Other</li> </ul> <p>&lt;count&gt; - message counter: number of pending messages related to the message waiting indicator &lt;indicator&gt; as it is stored on SIM.</p>
AT#MWI?	<p>Read command reports wheter the presentation of the <b>message waiting indicator</b> URC is currently enabled or not, and the current status of the <b>message waiting indicators</b> as they are currently stored on SIM. The format is:</p> <pre>#MWI: &lt;enable&gt;,&lt;status&gt;[,&lt;indicator&gt;[,&lt;count&gt;][&lt;CR&gt;&lt;LF&gt; #MWI: &lt;enable&gt;,&lt;status&gt;,&lt;indicator&gt;[,&lt;count&gt;][...]]]</pre>
AT#MWI=?	Test command returns the range of available values for parameter <enable>.

### 3.5.7.1.51. Audio Codec - #CODEC

#CODEC - Audio Codec	SELINT 0 / 1
AT#CODEC[=<codec>]	<p>Set command sets the audio codec mode.</p> <p>Parameter:</p> <p>&lt;codec&gt;</p> <ul style="list-style-type: none"> <li>0 - all the codec modes are enabled (factory default)</li> <li>1..31 - sum of integers each representing a specific codec mode:                     <ul style="list-style-type: none"> <li>1 - <b>FR</b>, full rate mode enabled</li> <li>2 - <b>EFR</b>, enhanced full rate mode enabled</li> <li>4 - <b>HR</b>, half rate mode enabled</li> <li>8 - <b>AMR-FR</b>, AMR full rate mode enabled</li> </ul> </li> </ul>

#CODEC - Audio Codec	SELINT 0 / 1
	<p>16 - <b>AMR-HR</b>, AMR half rate mode enabled</p> <p>Note: the full rate mode is added by default to any setting in the SETUP message (as specified in ETSI 04.08), but the call drops if the network assigned codec mode has not been selected by the user.</p> <p>Note: the setting 0 is equivalent to the setting 31.</p> <p>Note: The codec setting is saved in the profile parameters.</p> <p>Note: if optional parameter &lt;codec&gt; is omitted the behaviour of Set command is the same as Read command.</p>
AT#CODEC?	Read command returns current audio codec mode in the format:  <b>#CODEC: &lt;codec&gt;</b>
AT#CODEC=?	Test command returns the range of available values for parameter <codec>
Example	<p>AT#CODEC=14 OK</p> <p><i>sets the codec modes HR (4), EFR (2) and AMR-FR (8)</i></p>

#CODEC - Audio Codec	SELINT 2
AT#CODEC= [<codec>]	<p>Set command sets the audio codec mode.</p> <p>Parameter:</p> <p>&lt;codec&gt;</p> <p>0 - all the codec modes are enabled (factory default) 1..31 - sum of integers each representing a specific codec mode:</p> <ul style="list-style-type: none"> <li>1 - <b>FR</b>, full rate mode enabled <b>(This is the only option available for SW 13.00.000)</b></li> <li>2 - <b>EFR</b>, enhanced full rate mode enabled</li> <li>4 - <b>HR</b>, half rate mode enabled</li> <li>8 - <b>AMR-FR</b>, AMR full rate mode enabled</li> <li>16 - <b>AMR-HR</b>, AMR half rate mode enabled</li> </ul> <p>Note: the full rate mode is added by default to any setting in the SETUP message (as specified in ETSI 04.08), but the call drops if the network assigned codec mode has not been selected by the user.</p> <p>Note: the setting 0 is equivalent to the setting 31.</p> <p>Note: The codec setting is saved in the profile parameters.</p>

#CODEC - Audio Codec		SELINT 2
AT#CODEC?	Read command returns current audio codec mode in the format:  <b>#CODEC: &lt;codec&gt;</b>	
AT#CODEC=?	Test command returns the range of available values for parameter <codec>	
Example	AT#CODEC=14 OK  <i>sets the codec modes HR (4), EFR (2) and AMR-FR (8)</i>	

### 3.5.7.1.52. Network Timezone - #NITZ

#NITZ - Network Timezone		SELINT 0 / 1
AT#NITZ[= <val> [,<mode>]]]	<p>Set command enables/disables automatic date/time updating and Network Timezone unsolicited indication.</p> <p>Date and time information can be sent by the network after GSM registration or after GPRS attach.</p> <p>Parameters:</p> <p>&lt;val&gt;</p> <ul style="list-style-type: none"> <li>0 - disables automatic set (factory default)</li> <li>1 - enables automatic set</li> </ul> <p>&lt;mode&gt;</p> <ul style="list-style-type: none"> <li>0 - disables unsolicited message (factory default)</li> <li>1 - enables unsolicited message; after date and time updating the following unsolicited indication is sent:</li> </ul> <p><b>#NITZ: "yy/MM/dd,hh:mm:ss"</b></p> <p>where:</p> <ul style="list-style-type: none"> <li><b>yy</b> - year</li> <li><b>MM</b> - month (in digits)</li> <li><b>dd</b> - day</li> <li><b>hh</b> - hour</li> <li><b>mm</b> - minute</li> <li><b>ss</b> - second</li> </ul> <p>Note: issuing AT#NITZ&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT#NITZ=&lt;CR&gt; is the same as issuing the command AT#NITZ=0&lt;CR&gt;.</p>	
AT#NITZ?	<p>Read command reports whether automatic date/time updating is currently enabled or not, and whether Network Timezone unsolicited indication is enabled or not, in the format:</p> <p><b>#NITZ: &lt;val&gt;,&lt;mode&gt;</b></p>	

#NITZ - Network Timezone		SELINT 0 / 1
AT#NITZ=?	Test command returns supported values of parameters <val> and <mode>.	

#NITZ - Network Timezone		SELINT 2
AT#NITZ= [<val> [,<mode>]]	<p>Set command enables/disables (a) automatic date/time updating, (b) Full Network Name applying and (c) #NITZ URC; moreover it permits to change the #NITZ URC format.</p> <p>Date and time information can be sent by the network after GSM registration or after GPRS attach.</p> <p>Parameters:</p> <p>&lt;val&gt;</p> <ul style="list-style-type: none"> <li>0 - disables (a) automatic data/time updating, (b) Full Network Name applying and (c) #NITZ URC; moreover it sets the #NITZ URC '<i>basic</i>' format (see &lt;datetime&gt; below) (factory default for all products except GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS)</li> <li>1..15 - as a sum of:                     <ul style="list-style-type: none"> <li>1 - enables automatic date/time updating</li> <li>2 - enables Full Network Name applying</li> <li>4 - it sets the #NITZ URC '<i>extended</i>' format (see &lt;datetime&gt; below)</li> <li>8 - it sets the #NITZ URC '<i>extended</i>' format with Daylight Saving Time (DST) support (see &lt;datetime&gt; below)</li> </ul>                     (default for GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS: 7)                 </li> </ul> <p>&lt;mode&gt;</p> <ul style="list-style-type: none"> <li>0 - disables #NITZ URC (factory default)</li> <li>1 - enables #NITZ URC; after date and time updating the following unsolicited indication is sent:</li> </ul> <p>#NITZ: &lt;datetime&gt;</p> <p>where:</p> <p>&lt;datetime&gt; - string whose format depends on subparameter &lt;val&gt;</p> <ul style="list-style-type: none"> <li>"yy/MM/dd,hh:mm:ss" - '<i>basic</i>' format, if &lt;val&gt; is in (0..3)</li> <li>"yy/MM/dd,hh:mm:ss±zz" - '<i>extended</i>' format, if &lt;val&gt; is in (4..7)</li> <li>"yy/MM/dd,hh:mm:ss±zz,d" - '<i>extended</i>' format with DST support, if &lt;val&gt; is in (8..15)</li> </ul> <p>where:</p> <p><b>yy</b> - year</p> <p><b>MM</b> - month (in digits)</p> <p><b>dd</b> - day</p> <p><b>hh</b> - hour</p> <p><b>mm</b> - minute</p>	

#NITZ - Network Timezone	SELINT 2
	<p><b>ss</b> - second</p> <p><b>zz</b> - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory, range is -47..+48)</p> <p><b>d</b> - number of hours added to the local TZ because of Daylight Saving Time (summertime) adjustment; range is 0-3.</p> <p>Note: If the DST information isn't sent by the network, then the &lt;datetime&gt; parameter has the format "yy/MM/dd, hh:mm:ss±zz"</p>
AT#NITZ?	Read command reports whether (a) automatic date/time updating, (b) Full Network Name applying, (c) #NITZ URC (as well as its format) are currently enabled or not, in the format:
	#NITZ: <val>,<mode>
AT#NITZ=?	Test command returns supported values of parameters <val> and <mode>.

### 3.5.7.1.53. Clock management - #CCLK

#CCLK - Clock Management	SELINT 2
AT#CCLK=<time>	<p>Set command sets the real-time clock of the ME.</p> <p>Parameter:</p> <p>&lt;time&gt; - current time as quoted string in the format:  <b>"yy/MM/dd, hh:mm:ss±zz,d"</b></p> <p><b>yy</b> - year (two last digits are mandatory), range is 00..99</p> <p><b>MM</b> - month (two last digits are mandatory), range is 01..12</p> <p><b>dd</b> - day (two last digits are mandatory)</p> <p>The range for dd(day) depends either on the month and on the year it refers to. Available ranges are:</p> <ul style="list-style-type: none"> <li>(01..28)</li> <li>(01..29)</li> <li>(01..30)</li> <li>(01..31)</li> </ul> <p>Trying to enter an out of range value will raise an error</p> <p><b>hh</b> - hour (two last digits are mandatory), range is 00..23</p> <p><b>mm</b> - minute (two last digits are mandatory), range is 00..59</p> <p><b>ss</b> - seconds (two last digits are mandatory), range is 00..59</p> <p><b>±zz</b> - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory), range is -47..+48</p> <p><b>d</b> - number of hours added to the local TZ because of Daylight Saving Time (summertime) adjustment; range is 0-2.</p>
AT#CCLK?	<p>Read command returns the current setting of the real-time clock, in the format &lt;time&gt;.</p> <p>Note: if the time is set by the network but the DST information is missing, or the</p>

#CCLK - Clock Management		SELINT 2
	time is set by +CCLK command, then the <time> format is: "yy/MM/dd,hh:mm:ss±zz"	
AT#CCLK=?	Test command returns the <b>OK</b> result code.	
Example	<pre>AT#CCLK="02/09/07,22:30:00+04,1" OK AT#CCLK? #CCLK: 02/09/07,22:30:25+04,1 OK</pre>	

### 3.5.7.1.54. Enhanced Network Selection - #ENS

#ENS - Enhanced Network Selection		SELINT 2
AT#ENS=[<mode>]	<p>Set command is used to activate the ENS functionality.</p> <p>Parameter:</p> <p>&lt;mode&gt;</p> <p>0 - disable ENS functionality (default)      1 - enable ENS functionality; if <b>AT#ENS=1</b> has been issued, the following values will be automatically set:</p> <ul style="list-style-type: none"> <li>➤ at every next power-up                     <ul style="list-style-type: none"> <li>a Band GSM 850 and PCS enabled (<b>AT#BND=3</b>)</li> <li>b SIM Application Toolkit enabled on user interface 0 if not previously enabled on a different user interface (<b>AT#STIA=2</b>)</li> </ul> </li> <li>➤ just at first next power-up                     <ul style="list-style-type: none"> <li>a Automatic Band Selection enabled (<b>AT#AUTOBND=2</b>) only if the previous setting was equal to AT#AUTOBND=0</li> <li>b PLMN list not fixed (<b>AT#PLMNMODE=1</b>).</li> </ul> </li> </ul> <p>Note: the new setting will be available just at first next power-up.</p> <p>Note: If ‘Four Band’ Automatic Band Selection has been activated (<b>AT#AUTOBND=2</b>), at power-up the value returned by <b>AT#BND?</b> could be different from 3 when ENS functionality is enabled.</p> <p>Note: on version 10.0x.xx4 the set command AT#ENS=1 doesn’t enable the SIM Application Toolkit if the command AT#ENAUSIM? returns 1.</p>	
AT#ENS?	<p>Read command reports whether the ENS functionality is currently enabled or not, in the format:</p> <p>#ENS: &lt;mode&gt;</p> <p>where:</p> <p>&lt;mode&gt; as above</p>	
AT#ENS=?	Test command reports the available range of values for parameter <mode>.	
Reference	Cingular Wireless LLC Requirement	

### 3.5.7.1.55. Select Band - #BND

#BND - Select Band	SELINT 0 / 1
AT#BND[= <band>]	<p>Set command selects the current band.</p> <p>Parameter <b>&lt;band&gt;</b>:</p> <ul style="list-style-type: none"> <li>0 - GSM 900MHz + DCS 1800MHz</li> <li>1 - GSM 900MHz + PCS 1900MHz</li> <li>2 - GSM 850MHz + DCS 1800MHz (available only on quadri-band modules)</li> <li>3 - GSM 850MHz + PCS 1900MHz (available only on quadri-band modules)</li> </ul> <p>Note: This setting is maintained even after power off.</p> <p>Note: issuing <b>AT#BND&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT#BND=&lt;CR&gt;</b> is the same as issuing the command <b>AT#BND=0&lt;CR&gt;</b>.</p>
AT#BND?	Read command returns the current selected band in the format: <b>#BND: &lt;band&gt;</b>
AT#BND=?	Test command returns the supported range of values of parameter <b>&lt;band&gt;</b> .  Note: the range of values differs between triband modules and quadric-band modules
Note:	Not available for GC864-DUAL, GC864-DUAL V2 and GE864-DUAL V2

#BND - Select Band	SELINT 2
AT#BND= <band>	<p>Set command selects the current band.</p> <p>Parameter <b>&lt;band&gt;</b>:</p> <ul style="list-style-type: none"> <li>0 - GSM 900MHz + DCS 1800MHz</li> <li>1 - GSM 900MHz + PCS 1900MHz; this value is not available if the ENS functionality has been activated (see <b>#ENS</b>)</li> <li>2 - GSM 850MHz + DCS 1800MHz (available only on quadri-band modules); this value is not available if the ENS functionality has been activated (see <b>#ENS</b>)</li> <li>3 - GSM 850MHz + PCS 1900MHz (available only on quadri-band modules)</li> </ul> <p>Note: This setting is maintained even after power off.</p> <p>Note: if the normal automatic band selection is enabled (<b>AT#AUTOBND=1</b>) then the last <b>#BND</b> settings can automatically change at power-up; then you can normally use the command.</p>

<b>#BND - Select Band</b>		<b>SELINT 2</b>
		Note: if the ‘four bands’ automatic band selection is enabled ( <b>AT#AUTOBND=2</b> ) then you can issue <b>AT#BND=&lt;band&gt;</b> but it will have no functional effect; nevertheless every following read command <b>AT#BND?</b> will report that setting.
<b>AT#BND?</b>		Read command returns the current selected band in the format:  <b>#BND: &lt;band&gt;</b>
<b>AT#BND=?</b>		Test command returns the supported range of values of parameter <b>&lt;band&gt;</b> .  Note: the range of values differs between tri-band modules and quadri-band modules
Note:		Not available for GC864-DUAL, GC864-DUAL V2 and GE864-DUAL V2

### 3.5.7.1.56. Automatic Band Selection - #AUTOBND

<b>#AUTOBND - Automatic Band Selection</b>		<b>SELINT 0 / 1</b>
<b>AT#AUTOBND[=&lt;value&gt;]</b>	Set command enables/disables the automatic band selection at power-on.  Parameter: <b>&lt;value&gt;</b> : 0 - disables automatic band selection at power-on (default for all products) 1 - enables automatic band selection at power-on; <b>+COPS=0</b> is necessary condition to effectively have automatic band selection at next power-on; the automatic band selection stops as soon as a GSM cell is found.  Note: if automatic band selection is enabled the band changes every about 90 seconds through available bands until a GSM cell is found.  Note: if parameter <b>&lt;value&gt;</b> is omitted the behaviour of Set command is the same as Read command.	
<b>AT#AUTOBND?</b>	Read command returns whether the automatic band selection is enabled or not in the format:  <b>#AUTOBND: &lt;value&gt;</b>	
<b>AT#AUTOBND=?</b>	Test command returns the range of supported values for parameter <b>&lt;value&gt;</b> .	

<b>#AUTOBND - Automatic Band Selection</b>		<b>SELINT 2</b>
<b>AT#AUTOBND[=&lt;value&gt;]</b>	Set command enables/disables the automatic band selection at power-on.  Parameter:	

#AUTOBND - Automatic Band Selection	SELINT 2
	<p><b>&lt;value&gt;:</b></p> <p>0 - disables automatic band selection at <b>next</b> power-up (default for all products, except GE865-QUAD, GL865-QUAD, GE910-QUAD and GE910-GNSS)</p> <p>1 - enables automatic band selection at <b>next</b> power-up; the automatic band selection stops as soon as a GSM cell is found (deprecated).</p> <p>2 -enables automatic band selection in four bands (at 850/1900 and 900/1800); differently from previous settings it takes <b>immediate</b> effect (default for GE865-QUAD, GL865-QUAD, GE910-QUAD and GE910-GNSS)</p> <p>Note: necessary condition to <i>effectively</i> have automatic band selection at next power-up (due to either <b>AT#AUTOBND=1</b> or <b>AT#AUTOBND=2</b>) is that <b>AT+COPS=0</b> has to be previously issued</p> <p>Note: if automatic band selection is enabled (<b>AT#AUTOBND=1</b>) the band changes every about 90 seconds through available bands until a GSM cell is found.</p> <p>Note: if the current setting is equal to <b>AT#AUTOBND=0</b> and we're issuing <b>AT#ENS=1</b>, at <i>first next</i> power-up after the ENS functionality has been activated (see <b>#ENS</b>) the automatic band selection (<b>AT#AUTOBND=2</b>) is enabled.</p>
AT#AUTOBND?	Read command returns whether the automatic band selection is enabled or not in the form:
	<b>#AUTOBND: &lt;value&gt;</b>
AT#AUTOBND=?	Test command returns the range of supported values for parameter <b>&lt;value&gt;</b> .

### 3.5.7.1.57. Lock to single band - #BNDLOCK

#BNDLOCK – Lock to single band	SELINT 2
AT#BNDLOCK=<LockedBan d>	<p>This command allows to set the single band the device must be locked to, selectable within those allowed for the specific product.</p> <p>Parameters:</p> <p><b>&lt;LockedBand&gt;:</b></p> <p>0 - disables band locking (factory default);      1 - enables band locking on GSM 900MHz;      2 - enables band locking on DCS 1800MHz;      3 - enables band locking on GSM 850MHz;      4 - enables band locking on PCS 1900MHz.</p> <p>Note: the value set by command is directly stored in NVM and doesn't depend on the specific CMUX instance.</p> <p>Note: the new setting takes effect after a new registration procedure to the network.</p>

	<p>For this reason it is strongly recommended a power cycle (power-off and power-on the device) after new setting.</p> <p>Another possibility is to keep the device on and to force a new registration to the network as in the following example:</p> <ul style="list-style-type: none"> <li>- set AT+COPS=1,2,00001 (manual registration to not existing real network)</li> <li>- wait for +CREG: 0,3</li> <li>- set AT+COPS=0,0 (for automatic registration) or set AT+COPS=1,0,... (for manual registration)</li> </ul> <p>Note: in case of a four bands device with current setting <b>AT#AUTOBND=0</b> there might be conflicts between <b>AT#BND</b> and <b>AT#BNDLOCK</b> stored values. It is user responsibility to set proper values avoiding conflicts (no cross check is available between the two commands).</p>
<b>AT#BNDLOCK?</b>	Read command reports the currently stored parameter <LockedBand> in the format: <b>#BNDLOCK: &lt;LockedBand&gt;</b>
<b>AT#BNDLOCK=?</b>	Test command reports the supported range of values for parameter <LockedBand> according to specific product.

### 3.5.7.1.58. Skip Escape Sequence - #SKIPESC

<b>#SKIPESC - Skip Escape Sequence</b>		<b>SELINT 0 / 1</b>
<b>AT#SKIPESC[=&lt;mode&gt;]]</b>	<p>Set command enables/disables skipping the escape sequence +++ while transmitting during a data connection.</p> <p>Parameter: <b>&lt;mode&gt;</b></p> <p>0 - doesn't skip the escape sequence; its transmission is enabled (factory default). 1 - skips the escape sequence; its transmission is not enabled.</p> <p>Note: in case of an FTP connection, the escape sequence is not transmitted, regardless of the command setting.</p> <p>Note: issuing <b>AT#SKIPESC&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT#SKIPESC=&lt;CR&gt;</b> is the same as issuing the command <b>AT#SKIPESC=0&lt;CR&gt;</b>.</p>	
<b>AT#SKIPESC?</b>	Read command reports whether escape sequence skipping is currently enabled or not, in the format:	

#SKIPESC - Skip Escape Sequence		SELINT 0 / 1
	#SKIPESC: <mode>	
AT#SKIPESC=?	Test command reports supported range of values for parameter <mode>.	

#SKIPESC - Skip Escape Sequence		SELINT 2
AT#SKIPESC=[<mode>]	<p>Set command enables/disables skipping the escape sequence +++ while transmitting during a data connection.</p> <p>Parameter:  <b>&lt;mode&gt;</b>            0 - doesn't skip the escape sequence; its transmission is enabled (factory default).            1 - skips the escape sequence; its transmission is not enabled.</p> <p>Note: in case of an FTP connection, the escape sequence is not transmitted, regardless of the command setting.</p>	
AT#SKIPESC?	Read command reports whether escape sequence skipping is currently enabled or not, in the format:	
	#SKIPESC: <mode>	
AT#SKIPESC=?	Test command reports supported range of values for parameter <mode>.	

### 3.5.7.1.59. Escape Sequence Guard Time - #E2ESC

#E2ESC - Escape Sequence Guard Time		SELINT 0 / 1
AT#E2ESC[=<gt;>]	<p>Set command sets a guard time in seconds for the escape sequence in GPRS to be considered a valid one (and return to on-line command mode).</p> <p>Parameter:  <b>&lt;gt;&gt;</b>            0 - guard time defined by command S12 (factory default)            1..10 - guard time in seconds</p> <p>Note: if the Escape Sequence Guard Time is set to a value different from zero, it overrides the one set with <b>S12</b>.</p> <p>Note: issuing AT#E2ESC&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT#E2ESC=&lt;CR&gt; returns the <b>OK</b> result code.</p>	
AT#E2ESC?	Read command returns current value of the escape sequence guard time, in the format:	
	#E2ESC: <gt;>	
AT#E2ESC=?	Test command returns the <b>OK</b> result code.	

#E2ESC - Escape Sequence Guard Time		SELINT 2
AT#E2ESC=	Set command sets a guard time in seconds for the escape sequence in GPRS to be	

#E2ESC - Escape Sequence Guard Time		SELINT 2
[<gt>]	<p>considered a valid one (and return to on-line command mode).</p> <p>Parameter:  <b>&lt;gt&gt;</b>            0 - guard time defined by command S12 (factory default)            1..10 - guard time in seconds</p> <p>Note: if the Escape Sequence Guard Time is set to a value different from zero, it overrides the one set with <b>S12</b>.</p>	
AT#E2ESC?	Read command returns current value of the escape sequence guard time, in the format:	#E2ESC: <gt>
AT#E2ESC=?	Test command returns the range of supported values for parameter <gt>.	
AT#E2ESC= [<gt>]	<p>Set command sets a guard time in seconds for the escape sequence in GPRS to be considered a valid one (and return to on-line command mode).</p> <p>Parameter:  <b>&lt;gt&gt;</b>            0 - guard time defined by command S12 (factory default)            1..10 - guard time in seconds</p> <p>Note: if the Escape Sequence Guard Time is set to a value different from zero, it overrides the one set with <b>S12</b>.</p>	

### 3.5.7.1.60. PPP-GPRS Connection Authentication Type - #GAUTH

#GAUTH - PPP-GPRS Connection Authentication Type		SELINT 0 / 1
AT#GAUTH[=<type>]	<p>Set command sets the authentication type either for PPP-GPRS and PPP-GSM connections.</p> <p>Parameter  <b>&lt;type&gt;</b>            0 - no authentication            1 - PAP authentication (factory default)            2 - CHAP authentication</p> <p>Note: if parameter &lt;type&gt; is omitted the behaviour of Set command is the same as Read command.</p>	
AT#GAUTH?	Read command reports the current PPP-GPRS connection authentication type, in the format:	#GAUTH: <type>
AT#GAUTH=?	Test command returns the range of supported values for parameter <type>.	

#GAUTH - PPP-GPRS Connection Authentication Type		SELINT 2
AT#GAUTH=<type>	<p>Set command sets the authentication type either for PPP-GPRS and PPP-GSM connections.</p> <p>Parameter &lt;type&gt;</p> <ul style="list-style-type: none"> <li>0 - no authentication</li> <li>1 - PAP authentication (factory default)</li> <li>2 - CHAP authentication</li> <li>3 - automatic (PAP and CHAP)</li> </ul>	
AT#GAUTH?	Read command reports the current PPP-GPRS connection authentication type, in the format:	#GAUTH: <type>
AT#GAUTH=?	Test command returns the range of supported values for parameter <type>.	

### 3.5.7.1.61. PPP-GPRS Parameters Configuration - #GPPPCFG

#GPPPCFG - PPP-GPRS Parameters Configuration		SELINT 2
AT#GPPPCFG=<hostIPaddress>[,<LCPtimeout>[,<PPPmode>]]	<p>Set command sets three parameters for a PPP-GPRS connection.</p> <p>Parameters:</p> <p>&lt;hostIPaddress&gt; - Host IP Address that is assigned to the PPP server side (the host application); Sstring type, it can be any valid IP address in the format: xxx.xxx.xxx.xxx.</p> <p>&lt;LCPtimeout&gt; - LCP response timeout value in 100ms units 10..600 - hundreds of ms (factory default is 25)</p> <p>&lt;PPPmode&gt; - PPP mode</p> <ul style="list-style-type: none"> <li>0 - passive mode (default), the module waits the first message coming from the remote application (e.g. LCP Conf Req) before starting the LCP negotiation</li> <li>1 - active mode, the module starts autonomously the LCP negotiation immediately after the CONNECT message</li> <li>2 - passive mode, the module waits the first message coming from the remote application (e.g. LCP Conf Req) before starting the LCP negotiation; LCP termination is performed by the module</li> <li>3 - active mode, the module starts autonomously the LCP negotiation immediately after the CONNECT message; LCP termination is performed by the module</li> </ul> <p>Note: if &lt;hostIPaddress&gt;="0.0.0.0" (factory default) the <b>Host IP Address</b> assigned to the host application is the previous remote IP Address obtained by the Network.</p>	
AT# GPPPCFG?	Read command reports the current PPP-GPRS connection parameters in the	

#GPPPCFG - PPP-GPRS Parameters Configuration		SELINT 2
	format:  #GPPPCFG: <hostIPaddress>,<LCPtimeout>,<PPPmode>	
AT# GPPPCFG=?	Test command returns the range of supported values for parameter <LCPtimeout> and <PPPmode>, in the format:  #GPPPCFG: (10-600),(0-3)	

### 3.5.7.1.62. Enables/disables PPP compression - #GPPPCFGEXT

#GPPPCFGEXT – enables/disables PPP compression		SELINT 2
AT#GPPPCFGEXT =<Comp>[,<unused_A>[,<unused_B>[,<unused_C>]]]	Set command enables/disables the use of protocol and address/control field compression in PPP.  Parameter: <Comp> 0 – disables compression 1 – enables compression (default)	
AT#GPPPCFGEXT?	Read command returns the current configuration parameters value:  #GPPPCFGEXT: <Comp>,0,0,0<CR><LF>	
AT#GPPPCFGEXT=?	Test command returns the range of supported values for all the parameters.	

### 3.5.7.1.63. RTC Status - #RTCSTAT

#RTCSTAT - RTC Status		SELINT 0 / 1
AT#RTCSTAT[=<status>]	Set command resets the RTC status flag.  Parameter: <status> 0 - Set RTC Status to <b>RTC HW OK</b>  Note: the initial value of RTC status flag is <b>RTC HW Error</b> and it doesn't change until a command <b>AT#RTCSTAT=0</b> is issued.  Note: if a power failure occurs and the buffer battery is down the RTC status flag is set to 1. It doesn't change until command <b>AT#RTCSTAT=0</b> is issued.  Note: if parameter <status> is omitted the behaviour of Set command is the same as Read command.	
AT#RTCSTAT?	Read command reports the current value of RTC status flag, in the format:	

#RTCSTAT - RTC Status		SELINT 0 / 1
	#RTCSTAT: <status>	
AT#RTCSTAT=?	Test command returns the range of supported values for parameter <status>	

#RTCSTAT - RTC Status		SELINT 2
AT#RTCSTAT= [<status>]	<p>Set command resets the RTC status flag.</p> <p>Parameter:  <b>&lt;status&gt;</b>            0 - Set RTC Status to <b>RTC HW OK</b></p> <p>Note: the initial value of RTC status flag is <b>RTC HW Error</b> and it doesn't change until a command <b>AT#RTCSTAT=0</b> is issued.</p> <p>Note: if a power failure occurs and the buffer battery is down the RTC status flag is set to <b>1</b>. It doesn't change until command <b>AT#RTCSTAT=0</b> is issued.</p>	
AT#RTCSTAT?	Read command reports the current value of RTC status flag, in the format:	
	#RTCSTAT: <status>	
AT#RTCSTAT=?	Test command returns the range of supported values for parameter <status>	

### 3.5.7.1.64. GSM Antenna Detection - #GSMAD

#GSMAD - GSM Antenna Detection		SELINT 2
AT#GSMAD= [<mod>, [<uremode>, [<interval>, [<detGPIO>, [<repGPIO>]]]]]	<p>Set command sets the behaviour of antenna detection algorithm</p> <p>Parameters:</p> <p><b>&lt;mod&gt;</b></p> <ul style="list-style-type: none"> <li>0 - antenna detection algorithm not active</li> <li>1 - periodic activation of the antenna detection algorithm; detection is started every &lt;interval&gt; period, using &lt;detGPIO&gt; for detection; if the algorithm detects a change in the antenna status the module is notified by URC <b>#GSMAD</b> (see format below)</li> <li>2 - instantaneous activation of the antenna detection algorithm; if the algorithm detects a change in the antenna status the module is notified by URC <b>#GSMAD</b> (see format below); this instantaneous activation doesn't affect a periodic activation eventually started before. This modality is obsolete and is maintained only for backward compatibility. We suggest to use the modality 3</li> </ul> <p>URC format:</p> <p><b>#GSMAD: &lt;presence&gt;</b></p> <p>where:</p> <p><b>&lt;presence&gt;</b></p>	

	<p>0 - antenna connected.      1 - antenna connector short circuited to ground.      2 - antenna connector short circuited to power.      3 - antenna not detected (open).</p> <p>3 - instantaneous activation of the antenna detection algorithm as modality 2 but in this case the command doesn't return until the algorithm ended. The returned value is the antenna &lt;presence&gt; status just detected. Format:</p> <pre>AT#GSMAD=3 #GSMAD: &lt;presence&gt;</pre> <p>OK</p> <p>This instantaneous activation doesn't affect a periodic activation eventually started before, then the output format would be:</p> <pre>AT#GSMAD=3 #GSMAD: &lt;presence&gt;</pre> <p>OK</p> <p>#GSMAD: &lt;presence&gt; // URC resulting of previous #GSMAD=1</p> <p>&lt;urcmod&gt; - URC presentation mode. It has meaning and can be set only if &lt;mod&gt; is 1.</p> <p>0 - it disables the presentation of the antenna detection URC      1 - it enables the presentation of the antenna detection URC, whenever the antenna detection algorithm detects a change in the antenna status; the unsolicited message is in the format:</p> <pre>#GSMAD: &lt;presence&gt;</pre> <p>where:      &lt;presence&gt; is as before</p> <p>&lt;interval&gt; - duration in seconds of the interval between two consecutive antenna detection algorithm runs (default is 120). It has meaning and can be set only if &lt;mod&gt; is 1.      ..1..3600 - seconds</p> <p>&lt;detGPIO&gt; - defines which GPIO shall be used as input by the Antenna Detection algorithm. For the &lt;detGPIO&gt; actual range see Test Command</p> <p>&lt;repGPIO&gt; - defines which GPIO shall be used by the Antenna Detection algorithm to report antenna condition. It has meaning only if &lt;mod&gt; is 1. For the &lt;repGPIO&gt; actual range see Test Command.</p>
--	---

	<p>Note: the URC presentation mode &lt;urcmode&gt; is related to the current AT instance only (see +cmux); last &lt;urcmode&gt; settings are saved for every instance as extended profile parameters, thus it is possible to restore them either if the multiplexer control channel is released and set up, back and forth.</p> <p>Note: GPIO is set to LOW when antenna is connected. Set to HIGH otherwise</p> <p>Note: #GSMAD parameters, excluding &lt;urcmode&gt;, are saved in NVM.</p>
AT#GSMAD?	Read command returns the current parameter settings for #GSMAD command in the format:  <b>#GSMAD: &lt;mod&gt;,&lt;urcmode&gt;,&lt;interval&gt;,&lt;detGPIO&gt;,&lt;repGPIO&gt;</b>
AT#GSMAD=?	Test command reports the supported range of values for parameters <mod>, <urcmode>, <interval>, <detGPIO> and <repGPIO>.

### 3.5.7.1.65. SIM Detection Mode - #SIMDET

#SIMDET - SIM Detection Mode		SELINT 2
AT#SIMDET= <mode>	<p>Set command specifies the SIM Detection mode</p> <p>Parameter:</p> <p>&lt;mode&gt; - SIM Detection mode</p> <p>0 - ignore SIMIN pin and simulate the status ‘SIM Not Inserted’      1 - ignore SIMIN pin and simulate the status ‘SIM Inserted’      2 - automatic SIM detection through SIMIN Pin (default)</p>	
AT#SIMDET?	<p>Read command returns the currently selected Sim Detection Mode in the format:</p> <p><b>#SIMDET: &lt;mode&gt;,&lt;simin&gt;</b></p> <p><b>where:</b></p> <p>&lt;mode&gt; - SIM Detection mode, as before      &lt;simin&gt; - SIMIN pin real status      0 - SIM not inserted      1 - SIM inserted</p>	
AT#SIMDET=?	Test command reports the supported range of values for parameter <mode>	

### 3.5.7.1.66. SIM Enhanced Speed - #ENHSIM

#ENHSIM - SIM Enhanced Speed		SELINT 2
AT#ENHSIM= <mod>	Set command activates or deactivates the Sim Enhanced Speed Functionality.	

	<p>0 - Not Active (default for all 7.3.xxx software release)      1 - BRF is (F=512 D=8) (default for 10.00.xxx software release)</p> <p><i>(For BRF definition refer to ISO-7816-3)</i></p> <p>Note: value &lt;mod&gt; is saved in NVM and will be used since next module startup or new SIM insertion.</p> <p>Note: module will use the slowest speed between the one programmed and the one supported by the SIM.</p>
<b>AT#ENHSIM?</b>	Read command returns whether the Sim Enhanced Speed Functionality is currently activated or not, in the format:
<b>AT#ENHSIM=?</b>	Test command reports the supported range of values for parameter <mod>.
Reference	GSM 11.11, ISO-7816-3
Note	It is strongly suggested to verify which is the maximum speed supported by the final application

### 3.5.7.1.67. Subscriber number - #SNUM

#SNUM – Subscriber Number	SELINT 2
<b>AT#SNUM=</b> <index>,<number>[,<alpha>]  Parameter: <index> - record number The number of record in the EFmsisdn depends on the SIM. If only <index> value is given, then delete the EFmsisdn record in location <index> is deleted. For all SW versions except 13.00.xxx and 16.00.xxx, if the ENS functionality has not been previously enabled (see <b>#ENS</b> ), <index>=1 is the only value admitted.  <number> - string containing the phone number The string could be written between quotes. For all SW versions except 13.00.xxx and 16.00.xxx, if the ENS functionality has been previously enabled (see <b>#ENS</b> ) "+" at start only is also admitted (international numbering scheme).  <alpha> - alphanumeric string associated to <number>. Default value is empty string (""), otherwise the used character set should be the one selected with +CSCS. The string could be written between quotes, the number of characters depends on the SIM. If empty string is given (""), the corresponding <alpha> will be an empty string.  Note: the command return ERROR if EFmsisdn file is not present in the SIM or if	

	MSISDN service is not allocated and activated in the SIM Service Table (see 3GPP TS 11.11).
<b>AT#SNUM=?</b>	Test command returns the <b>OK</b> result code

### 3.5.7.1.68. SIM Answer to Reset - #SIMATR

<b>#SIMATR – SIM Answer To Reset</b>		<b>SELINT 2</b>
<b>AT#SIMATR</b>	<p>This command returns the characters collected from the Reset/ATR procedure.</p> <p>Note: The ATR is the information presented by the SIM to the ME at the beginning of the card session and gives operational requirements (ISO/IEC 7816-3).</p>	

### 3.5.7.1.69. CPU Clock Mode - #CPUMODE

<b>#CPUMODE - CPU Clock Mode</b>		<b>SELINT 2</b>
<b>AT#CPUMODE=&lt;mode&gt;</b>	<p>Set command specifies the CPU clock mode</p> <p>Parameter:</p> <p><b>&lt;mode&gt;</b></p> <ul style="list-style-type: none"> <li>0 - normal CPU clock @26Mhz</li> <li>1 - CPU clock @52Mhz</li> <li>2 - CPU clock @52Mhz, during GPRS TX/RX only</li> <li>3 - CPU clock @104Mhz</li> <li>4 - CPU clock @104Mhz, during GPRS TX/RX only</li> </ul> <p>Note: using &lt;mode&gt; greater than 0, the power consumption will increase</p>	
<b>AT#CPUMODE?</b>	Read command returns the currently selected CPU clock mode in the format: <b>#CPUMODE: &lt;mode&gt;</b>	
<b>AT#CPUMODE=?</b>	Test command reports the supported range of values for parameter <mode>.	

### 3.5.7.1.70. GSM Context Definition - #GSMCONT

#GSMCONT - GSM Context Definition		SELINT 2
AT#GSMCONT= <cid>[,<P_type>, <CSD_num>]	<p>Set command specifies context parameter values for the only GSM context, identified by the (local) context identification parameter 0.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;cid&gt; - context Identifier; numeric parameter which specifies the only GSM context</li> <li>0</li> <li>&lt;P_type&gt; - protocol type; a string parameter which specifies the type of protocol "IP" - Internet Protocol</li> <li>&lt;CSD_num&gt; - phone number of the internet service provider</li> </ul> <p>Note: issuing #GSMCONT=0 causes the values for context number 0 to become undefined.</p>	
AT#GSMCONT?	Read command returns the current settings for the GSM context, if defined, in the format:  +GSMCONT: <cid>,<P_type>,<CSD_num>	
AT#GSMCONT=?	Test command returns the supported range of values for all the parameters.	

### 3.5.7.1.71. IPEGSM configurations - #GSMCONTCFG

#GSMCONTCFG - IPEGSM configurations		SELINT 2
AT#GSMCONTCFG= <actTo>[,<unused_A> [,<unused_B>[,<unused_C>]]]]	<p>Set command sets the IPEGSM configuration.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;actTo&gt; - activation timer value</li> <li>0 – no timer (default)</li> <li>50..65535 – timeout value in hundreds of milliseconds</li> </ul> <p>Note: this timeout starts as soon as the PPP activation starts (refer to EasyGPRS User Guide). It does not include the time for the CSD call to be established.</p> <p>Note: the value set by command is directly stored in NVM and doesn't depend on the specific AT instance.</p>	
AT#GSMCONTCFG?	Read command returns the current configuration parameters value:  #GSMCONTCFG:<actTo>,0,0,0<CR><LF>	
AT#GSMCONTCFG=?	Test command returns the range of supported values for all the subparameters.	

### 3.5.7.1.72. Show Address - #CGPADDR

#CGPADDR - Show Address	SELINT 2
AT#CGPADDR=<cid>[,<cid>[,...]]	<p>Execution command returns either the IP address for the GSM context (if specified) and/or a list of PDP addresses for the specified PDP context identifiers</p> <p>Parameters:</p> <p>&lt;cid&gt; - context identifier</p> <p>0 - specifies the GSM context (see +GSMCONT).</p> <p>1..5 - numeric parameter which specifies a particular PDP context definition (see +CGDCONT command).</p> <p>Note: if no &lt;cid&gt; is specified, the addresses for all <b>defined</b> contexts are returned.</p> <p>Note: issuing the command with more than 6 parameters raises an error.</p> <p>Note: the command returns only one row of information for every specified &lt;cid&gt;, even if the same &lt;cid&gt; is present more than once.</p> <p>The command returns a row of information for every specified &lt;cid&gt; whose context has been already defined. No row is returned for a &lt;cid&gt; whose context has not been defined yet. Response format is:</p> <pre>#CGPADDR: &lt;cid&gt;,&lt;address&gt;[&lt;CR&gt;&lt;LF&gt; #CGPADDR: &lt;cid&gt;,&lt;address&gt;[...]]</pre> <p>where:</p> <p>&lt;cid&gt; - context identifier, as before</p> <p>&lt;address&gt; - its meaning depends on the value of &lt;cid&gt;</p> <ul style="list-style-type: none"> <li>a) if &lt;cid&gt; is the (only) GSM context identifier (&lt;cid&gt;=0) it is the dynamic address assigned during the GSM context activation.</li> <li>b) if &lt;cid&gt; is a PDP context identifier (&lt;cid&gt; in (1..5)) it is a string that identifies the terminal in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the +CGDCONT command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to by &lt;cid&gt;.</li> </ul> <p>Note: if no address is available the empty string ("") is represented as &lt;address&gt;.</p>
AT#CGPADDR=?	Test command returns a list of defined <cid>s.
Example	<pre>AT#SGACT=0,1 #SGACT: xxx.yyy.zzz.www  OK AT#CGPADDR= #CGPADDR: 0,"xxx.yyy.zzz.www"</pre>

	OK AT#CGPADDR=? #CGPADDR: (0) OK
--	---

### 3.5.7.1.73. Network Scan Timer - #NWSCANTMR

#NWSCANTMR - Network Scan Timer	SELINT 2
<b>AT#NWSCANTMR=&lt;tmr&gt;</b>	Set command sets the Network Scan Timer that is used by the module to schedule the next network search when it is without network coverage (no signal).  Parameter: <tmr> - timer value in units of seconds 5 3600 - time in seconds (default 5 secs.)
<b>AT#NWSCANTMR</b>	Execution command reports time, in seconds, when the next scan activity will be executed. The format is:  <b>#NWSCANTMREXP: &lt;time&gt;</b>  Note: if <time> is zero it means that the timer is not running
<b>AT#NWSCANTMR?</b>	Read command reports the current parameter setting for <b>#NWSCANTMR</b> command in the format:  <b>#NWSCANTMR: &lt;tmr&gt;</b>
<b>AT#NWSCANTMR=?</b>	Test command reports the supported range of values for parameter <tmr>
Note	How much time it takes to execute the network scan depends either on how much bands have been selected and on network configuration (mean value is 5 seconds)

### 3.5.7.1.74. Call Establishment Lock - #CESTHLCK

#CESTHLCK – Call establishment lock	SELINT 2
<b>AT#CESTHLCK=[&lt;closure_type&gt;]</b>	This command can be used to disable call abort before the DCE enters connected state.  <closure_type>: 0 - Aborting the call setup by reception of a character is generally possible at any time before the DCE enters connected state (default)  1 - Aborting the call setup is disabled until the DCE enters connected state
<b>AT#CESTHLCK?</b>	Read command returns the current setting of <closure_type> parameter in the format:  <b>#CESTHLCK: &lt;closure_type&gt;</b>

#CESTHLCK – Call establishment lock	SELINT 2
AT#CESTHLCK=?	Test command returns the supported range of values for the <closure_type> parameter

### 3.5.7.1.75. Phone Activity Status - #CPASMODE

#CPASMODE – AT+CPAS answer mode	SELINT 2
AT#CPASMODE=<mode>	<p>Set command enables/disables a modified AT+CPAS command response when the command is issued before an incoming call starts ringing (RING unsolicited code sent to the TE). If &lt;mode&gt; is 0, AT+CPAS response will be +CPAS: 4 otherwise the response will be +CPAS: 3</p> <p>Parameter:          &lt;mode&gt; - AT+CPAS response selection          0 – standard AT+CPAS response (factory default)          1 – modified AT+CPAS response.</p> <p>Note: the value set by command is directly stored in NVM and doesn't depend on the specific AT instance</p>
AT#CPASMODE?	Read command reports the currently selected <mode> in the format: <b>#CPASMODE: &lt;mode&gt;</b>
AT#CPASMODE=?	Test command reports the supported range of values for parameter <mode>

### 3.5.7.1.76. ICCID SIM file reading mode - #FASTCCID

#FASTCCID – Set ICCID SIM file reading mode	SELINT 2
AT#FASTCCID=[<fast>]	<p>The set command is used to specify the ICCID reading mode.</p> <p>&lt;fast&gt;: a numeric parameter which indicates the reading mode</p> <p>0 – the ICCID value is read from the SIM card each time the AT#CCID command is issued and not during SIM card initialization          (default for all products, except for GE910-QUAD and GE910-GNSS)</p> <p>1 – the ICCID value is read from the SIM card during SIM card initialization          (default for GE910-QUAD and GE910-GNSS)</p> <p>Note: the value is saved in NVM and has effect only at the next power cycle.</p>
AT#FASTCCID?	The read command returns the currently selected reading mode in the form:

#FASTCCID – Set ICCID SIM file reading mode	SELINT 2
	#FASTCCID: <fast>
AT#FASTCCID=?	Test command reports the supported list of currently available <fast>s.

### 3.5.7.1.77. Write to I2C - #I2CWR

#I2CWR – Write to I2C	SELINT 2
<b>AT#I2CWR=</b> <sdaPin>, <sclPin>, <deviceId>, <registerId>, <len>	<p>This command is used to Send Data to an I2C peripheral connected to module GPIOs</p> <p>&lt;sdaPin&gt;: GPIO number for SDA . Valid range is “any input/output pin” (see Test Command.)</p> <p>&lt;sclPin&gt;: GPIO number to be used for SCL. Valid range is “any output pin” (see Test Command).</p> <p>&lt;deviceId&gt;: address of the I2C device, with the LSB, used for read\write command. It doesn't matter if the LSB is set to 0 or to 1. 10 bit addressing supported. Value has to be written in hexadecimal form (without 0x).</p> <p>&lt;registerId&gt;: Register to write data to , range 0..255. Value has to be written in hexadecimal form (without 0x).</p> <p>&lt;len&gt;: number of data to send. Valid range is 1-254.</p> <p>The module responds to the command with the prompt '&gt;' and awaits for the data to send. To complete the operation send <b>Ctrl-Z</b> char (<b>0x1A</b> hex); to exit without writing the message send <b>ESC</b> char (<b>0x1B</b> hex).</p> <p>Data shall be written in Hexadecimal Form.</p> <p>If data are successfully sent, then the response is <b>OK</b>.</p> <p>If data sending fails for some reason, an error code is reported. Example if CheckAck is set and no Ack signal was received on the I2C bus</p> <p>E.g.</p> <pre>AT#I2CWR=2,3,20,10,14 &gt; 00112233445566778899AABBCCDD&lt;ctrl-z&gt; OK Set GPIO2 as SDA, GPIO3 as SCL; Device I2C address is 0x20; 0x10 is the address of the first register where to write I2C data;</pre>

#I2CWR – Write to I2C	SELINT 2
	<p>14 data bytes will be written since register 0x10</p> <p>NOTE: At the end of the execution GPIO will be restored to the original setting ( check AT#GPIO Command )</p> <p>NOTE: device address, register address where to read from\ write to, and date bytes have to be written in hexadecimal form without 0x.</p>
AT#I2CWR=?	Test command reports the supported list of currently available <service>s.

### 3.5.7.1.78. Read to I2C - #I2CRD

#I2CRD – Read to I2C	SELINT 2
AT#I2CRD= <sdaPin>, <sclPin>, <deviceId>, <registerId>, <len>	<p>This command is used to Receive Data from an I2C peripheral connected to module GPIOs</p> <p>&lt;sdaPin&gt;: GPIO number for SDA . Valid range is “any input/output pin” (see Test Command.)</p> <p>&lt;sclPin&gt;: GPIO number to be used for SCL. Valid range is “any output pin” (see Command Test).</p> <p>&lt;deviceId&gt;: address of the I2C device, with the LSB, used for read\write command. It doesn't matter if the LSB is set to 0 or to 1. 10 bit addressing supported. Value has to be written in hexadecimal form (without 0x before).</p> <p>&lt;registerId&gt;: Register to read data from, range 0..255. Value has to be written in hexadecimal form (without 0x before).</p> <p>&lt;len&gt;: number of data to receive. Valid range is 1-254.</p> <p>Data Read from I2C will be dumped in Hex:</p> <p>E.g. AT#I2CRD=2,3,20,10,12 #I2CRD: 00112233445566778899AABBCC OK</p> <p>NOTE: If data requested are more than data available in the device, dummy data ( normally 0x00 or 0xff ) will be dumped.</p> <p>NOTE: At the end of the execution GPIO will be restored to the original setting ( check AT#GPIO Command )</p> <p>NOTE: device address, register address where to read from\ write to, and date bytes have to be written in hexadecimal form without 0x.</p>

#I2CRD – Read to I2C	SELINT 2
AT#I2CRD=?	Test command reports the supported list of currently available <service>s.

### 3.5.7.1.79. Power saving mode ring - #PSMRI

#PSMRI – Power Saving Mode Ring	SELINT 2
<b>AT#PSMRI=</b> <x>	<p>Set command enables/disables the Ring Indicator pin response to an URC message while modem is in power saving mode. If enabled, a negative going pulse is generated, when URC message for specific event is invoked.</p> <p>The duration of this pulse is determined by the value of &lt;x&gt;.</p> <p>Parameter:</p> <p>&lt;x&gt; - RI enabling</p> <p>0 - disables RI pin response for URC message(factory default)</p> <p>50-1150 - enables RI pin response for URC messages.</p> <p>Note: when RING signal from incoming call/SMS/socket listen is enabled, the behaviour for #PSMRI will be ignored.</p> <p>Note: to avoid missing of URC messages while modem is in power saving mode flow control has to be enabled in command mode (AT#CFLO=1)</p> <p>Note: the behavior for #PSMRI is invoked, only when modem is in sleep mode (AT+CFUN=5 and DTR Off on Main UART)</p> <p>Note: the value set by command is stored in the profile extended section and doesn't depend on the specific AT instance</p>
<b>AT#PSMRI?</b>	Read command reports the duration in ms of the pulse generated, in the format: <b>#PSMRI: &lt;x&gt;</b>
<b>AT#PSMRI=?</b>	Test command reports the supported range of values for parameter <x>

### 3.5.7.1.80. Software level selection - #SWLEVEL

#SWLEVEL – SW Level selection	SELINT 2
AT#SWLEVEL=<level>	<p>Set command enables 2 enhanced features:</p> <ul style="list-style-type: none"> <li>1) It permits to get a faster indication of SIM status when the PIN is not required (see command #QSS)</li> <li>2) DTMF duration (see AT+VTS;AT+VTD ) can be controlled even for values shorter than 300mS.</li> </ul> <p>Parameters:</p> <p>&lt;level&gt; - SW level</p>

	<p>0 - disable SW level (default for all products, except GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>1 - enable SW level (default for GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>Note1: the value of &lt;level&gt; parameter is directly stored in NVM and doesn't depend on the specific AT instance.</p> <p>Note2: please remember that DTMFs are generated at network level, and the real duration can be operator dependant.</p>
AT#SWLEVEL?	Read command reports the currently selected <level> in the format:  <b>#SWLEVEL: &lt;level&gt;</b>
AT#SWLEVEL=?	Test command reports the supported range of values for parameter<level>

### 3.5.7.1.81. Control Command Flow - #CFLO

<b>#CFLO – Command Flow Control</b>		<b>SELINT 2</b>
AT#CFLO= <enable>	<p>Set command enables/disables the flow control in command mode. If enabled, current flow control is applied to both data mode and command mode.</p> <p>Parameter:</p> <p>&lt;enable&gt; -</p> <p>0 – disable flow control in command mode &lt;default value&gt;</p> <p>1 – enable flow control in command mode</p> <p>Note: setting value is saved in the profile</p>	
AT#CFLO?	Read command returns current setting value in the format  <b>#CFLO: &lt;enable&gt;</b>	
AT#CFLO=?	Test command returns the range of supported values for parameter <enable>	

### 3.5.7.1.82. Report concatenated SMS indexes - #CMGLCONCINDEX

<b>#CMGLCONCINDEX – Report concatenated SMS indexes</b>		<b>SELINT 2</b>
AT#CMGLCONCINDEX	<p>The command will report a line for each concatenated SMS containing:</p> <p><b>#CMGLCONCINDEX: N,i,j,k...</b></p> <p>where</p> <p>N is the number of segments that form the whole concatenated SMS</p>	

#CMGLCONCINDEX – Report concatenated SMS indexes		SELINT 2
	i,j,k are the SMS indexes of each SMS segment , 0 if segment has not been received  If no concatenated SMS is present on the SIM, only <b>OK</b> result code will be returned.	
AT#CMGLCONCINDEX=?	Test command returns <b>OK</b> result code.	
Example	at#cmglconcindex #CMGLCONCINDEX: 3,0,2,3 #CMGLCONCINDEX: 5,4,5,6,0,8  OK	

### 3.5.7.1.83. Codec Information - #CODECINFO

#CODECINFO – Codec Information		SELINT 2
AT#CODECINFO[ =<format>[, <mode>]]	<p>This command is both a set and an execution command.</p> <p>Set command enables/disables codec information reports depending on the parameter &lt;mode&gt;, in the specified &lt;format&gt;.</p> <p>Parameters:</p> <p>&lt;format&gt;</p> <ul style="list-style-type: none"> <li>0 – numeric format (default)</li> <li>1 – textual format</li> </ul> <p>&lt;mode&gt;</p> <ul style="list-style-type: none"> <li>0 - disable codec information unsolicited report (default)</li> <li>1 - enable codec information unsolicited report only if the codec changes</li> <li>2 - enable short codec information unsolicited report only if the codec changes</li> </ul> <p>If &lt;mode&gt;=1 the unsolicited channel mode information is reported in the following format:</p> <pre>(if &lt;format&gt;=0) #CODECINFO: &lt;codec_used&gt;,&lt;codec_set&gt;  (if &lt;format&gt;=1) #CODECINFO: &lt;codec_used&gt;,&lt;codec_set1&gt; [,&lt;codec_set2&gt;[..,[&lt;codec_setn&gt;]]]</pre> <p>If &lt;mode&gt;=2 the unsolicited codec information is reported in the following format:</p> <pre>#CODECINFO: &lt;codec_used&gt;</pre>	

<b>#CODECINFO – Codec Information</b>	<b>SELINT 2</b>
---------------------------------------	-----------------

	<p>The reported values are described below.</p> <p>Execution command reports codec information in the specified &lt;format&gt;.</p> <pre>(if &lt;format&gt;=0) #CODECINFO: &lt;codec_used&gt;,&lt;codec_set&gt;  (if &lt;format&gt;=1) #CODECINFO: &lt;codec_used&gt;,&lt;codec_set1&gt; [,&lt;codec_set2&gt;[..[,codec_setn]]]</pre> <p>The reported values are:</p> <pre>(if &lt;format&gt;=0) &lt;codec_used&gt; - one of the following channel modes: 0 – no TCH 1 - full rate speech 1 on TCH 2 - full rate speech 2 on TCH 4 - half rate speech 1 on TCH 8 - full rate speech 3 – AMR on TCH 16 - half rate speech 3 – AMR on TCH 128 – full data 9.6 129 – full data 4.8 130 – full data 2.4 131 – half data 4.8 132 – half data 2.4 133 – full data 14.4  &lt;codec_set&gt; 1..31 - sum of integers each representing a specific codec mode: 1 - FR, full rate mode enabled 2 - EFR, enhanced full rate mode enabled 4 - HR, half rate mode enabled 8 - FAMR, AMR full rate mode enabled 16 - HAMR, AMR half rate mode enabled  (if &lt;format&gt;=1) &lt;codec_used&gt; - one of the following channel modes: None – no TCH FR - full rate speech 1 on TCH EFR - full rate speech 2 on TCH HR - half rate speech 1 on TCH FAMR - full rate speech 3 – AMR on TCH HAMR - half rate speech 3 – AMR on TCH FD96 - full data 9.6 FD48 - full data 4.8</pre>
--	--

#CODECINFO – Codec Information	SELINT 2
	<p>FD24 - full data 2.4      HD48 - half data 4.8      HD24 - half data 2.4      FD144 - full data 14.4</p> <p><b>&lt;codec_setn&gt;</b>      FR - full rate mode enabled      EFR - enhanced full rate mode enabled      HR - half rate mode enabled      FAMR - AMR full rate mode enabled      HAMR - AMR half rate mode enabled</p> <p>Note: The command refers to codec information in speech call and to channel mode in data/fax call.</p> <p>Note: if AT#CODEC is 0, the reported codec set for <b>&lt;format&gt;=0</b> is 31 (all codec).</p>
<b>AT#CODECINFO?</b>	Read command reports <b>&lt;format&gt;</b> and <b>&lt;mode&gt;</b> parameter values in the format:  <b>#CODECINFO: &lt;format&gt;,&lt;mode&gt;</b>
<b>AT#CODECINFO=?</b>	Test command returns the range of supported <b>&lt;format&gt;</b> and <b>&lt;mode&gt;</b> .

### 3.5.7.1.84. Second Interface Instance - #SII

#SII – Second Interface Instance	SELINT 2
<b>AT#SII=&lt;inst&gt;[,&lt;rate&gt;[,&lt;form at&gt;[,&lt;parity&gt;]]]</b>	<p>This command activates one of the three AT instances available, and assigns it to the ASC1 serial port at a particular speed and format.</p> <p>Parameters:</p> <p><b>&lt;inst&gt;:</b>      is a number that identifies the instance that will be activated on ASC1. The parameter is mandatory and can be 0, 1 or 2:      0 – disables the other AT instance and restores the trace service;      1 – enables instance 1;      2 – enables instance 2;</p> <p><b>&lt;rate&gt;:</b>      Set command specifies the DTE speed at which the device accepts commands during command mode operations; it may be used to fix the DTE-DCE interface speed. The default value is 115200. It has sense only if <b>&lt;inst&gt;</b> parameter has value either 1 or 2.      Parameter:      300</p>

	<p>1200 2400 4800 9600 19200 38400 57600 115200</p> <p><b>&lt;format&gt;:</b> determines the number of bits in the data bits, the presence of a parity bit, and the number of stop bits in the start-stop frame. The default value is 3,0, (N81) format. It has sense only if <b>&lt;inst&gt;</b> parameter has value either 1 or 2.</p> <p>Parameter: 1 - 8 Data, 2 Stop 2 - 8 Data, 1 Parity, 1 Stop 3 - 8 Data, 1 Stop 5 - 7 Data, 1 Parity, 1 Stop</p> <p><b>&lt;parity&gt;:</b> determines how the parity bit is generated and checked, if present. It has a meaning only if <b>&lt;format&gt;</b> parameter has value either 2 or 5 and only if <b>&lt;inst&gt;</b> parameter has value either 1 or 2.</p> <p>Parameter: 0 - Odd 1 - Even</p> <p>Note: the value set by command is directly stored in NVM and doesn't depend on the specific AT instance.</p> <p>Note: two sets of <b>&lt;rate&gt;</b>, <b>&lt;format&gt;</b> and <b>&lt;parity&gt;</b> parameters values are stored in NVM: one for instance 1 (<b>&lt;inst&gt;</b> = 1) and the other for instance 2 (<b>&lt;inst&gt;</b> = 2). The <b>&lt;rate&gt;</b>, <b>&lt;format&gt;</b> and <b>&lt;parity&gt;</b> parameters values are ignored when <b>&lt;inst&gt;</b> parameter has value 0.</p> <p>Note: ASC1 port doesn't support hardware flow control.</p>
AT#SII?	<p>Read command reports the currently active parameters settings in the format:</p> <p><b>#SII: &lt;inst&gt;[,&lt;rate&gt;,&lt;format&gt;,&lt;parity&gt;]</b></p> <p>Note: the <b>&lt;rate&gt;</b>, <b>&lt;format&gt;</b> and <b>&lt;parity&gt;</b> parameters values are showed only if <b>&lt;inst&gt;</b> parameter has value either 1 or 2.</p>
AT#SII=?	<p>Test command reports the supported range of values for parameter <b>&lt;inst&gt;</b>, <b>&lt;rate&gt;</b>, <b>&lt;format&gt;</b> and <b>&lt;parity&gt;</b></p>

### 3.5.7.1.85. SIMIN pin configuration - #SIMINCFG

#SIMINCFG – SIMIN pin configuration		SELINT 2
AT#SIMINCFG=<GPIO_pin>	<p>This command allows to configure a General Purpose I/O pin as SIM DETECT input</p> <p><b>Parameters:</b></p> <p>&lt;GPIO_pin&gt; - GPIO pin number:            0 – no GPIO pin is selected (default value)            1 to <i>Max_GPIO_Pin_Number</i></p> <p>Note: <i>Max_GPIO_Pin_Number</i> is the highest GPIO pin number available: this value depends on the hardware. (See Test command or Hardware User Guide)</p>	
AT#SIMINCFG?	Read command reports the selected GPIO pin in the format:  <b>#SIMINCFG: &lt;GPIO_pin&gt;</b>	
AT#SIMINCFG=?	Test command reports supported range of values for parameter <b>&lt;GPIO_pin&gt;</b>	

### 3.5.7.1.86. System turn-off - #SYSHALT

#SYSHALT – system turn-off		SELINT 0,1,2
AT#SYSHALT[= <GPIO_restore>, <DTR_wakeup_en>]	<p>The module is turned off. It can be awoken by reset pin, alarm or DTR pin transition to low.</p> <p>Parameters:</p> <p>&lt;GPIO_restore&gt;:            0 – GPIOs and serial ports pins are left unchanged (default)            1 – GPIO and serial pins are set in input with pull down</p> <p>&lt;DTR_wakeup_en&gt;:            0 – DTR has no effect on module turned off by SYSHALT (default)            1 – DTR transition from high to low turns on again the module turned off by SYSHALT command</p>	
AT#SYSHALT?	Read command reports the default state of the parameters <GPIO_restore> and <DTR_wakeup_en> in the format:  <b>#SYSHALT: 0,0</b>	
AT#SYSHALT=?	Test command reports supported range of values for all parameters.	

### 3.5.7.1.87. Enable USIM application - #ENAUSIM

#ENAUSIM – Enable USIM application		SELINT 2
AT#ENAUSIM=<enable>	<p>This command enables/disables the USIM application</p> <p>Parameters:</p> <p>&lt;enable&gt;:</p> <ul style="list-style-type: none"> <li>0: USIM application Disabled</li> <li>1: USIM application Enabled, SIM Application Toolkit disabled</li> <li>2: USIM application Enabled, SIM Application Toolkit enabled</li> </ul> <p>Note: the value set by command is directly stored in NVM and available on following reboot. USIM application activation/deactivation is only performed at power on.</p> <p>Each time &lt;enable&gt; value is changed a power cycle is needed</p> <p>Note: when the USIM application is enabled with &lt;enable&gt; equal to 1, SIM Application Toolkit will be automatically disabled and cannot be activated. In particular, the request of SAT activation (see #STIA) will return ERROR and entering AT#ENS = 1 doesn't activate SAT.</p>	
AT#ENAUSIM?	Read command reports the currently selected <enable> in the format: <b>#ENAUSIM: &lt;enable&gt;</b>	
AT#ENAUSIM=?	Test command reports the supported range of values for parameter <enable>	

### 3.5.7.1.88. Select language - #LANG

#LANG – select language		SELINT 2
AT#LANG=<lan>	<p>Set command selects the currently used language for displaying different messages</p> <p>Parameter:</p> <p>&lt;lan&gt; - selected language</p> <ul style="list-style-type: none"> <li>“en” – English (factory default)</li> <li>“it” – Italian</li> </ul>	
AT#LANG?	Read command reports the currently selected <lan> in the format:	

	#LANG: <lan>
AT#LANG=?	Test command reports the supported range of values for parameter <lan>

### 3.5.7.1.89. Call forwarding Flags - #CFF

#CFF – Call Forwarding Flags		SELINT 2
AT#CFF=<enable>	<p>Set command enables/disables the presentation of the SIM <b>call forwarding flags</b> URC.</p> <p>Parameter:  <b>&lt;enable&gt;</b></p> <p>0 - disable the presentation of the <b>#CFF</b> URC          1 - enable the presentation of the <b>#CFF</b> URC each time the Call Forwarding Unconditional (CFU) SS setting is changed or checked and, at startup, the presentation of the status of the <b>call forwarding flags</b>, as they are currently stored on SIM.</p> <p>The URC format is:</p> <p><b>#CFF: &lt;status&gt;,&lt;fwdtonum&gt;</b></p> <p>where:  <b>&lt;status&gt;</b></p> <p>0 – CFU disabled          1 – CFU enabled</p> <p>&lt; <b>fwdtonum</b> &gt; - number incoming calls are forwarded to</p> <p>The presentation at start up of the <b>call forwarding flags</b> status, as they are currently stored on SIM, is as follows:</p> <p><b>#CFF: &lt;status&gt;,&lt; fwdtonum &gt;</b></p> <p>where:  <b>&lt;status&gt;</b></p> <p>0 – CFU disabled          1 – CFU enabled</p> <p>&lt; <b>fwdtonum</b> &gt; - number incoming calls are forwarded to</p>	
AT#CFF?	Read command reports whether the presentation of the <b>call forwarding flags</b> URC is currently enabled or not, and, if the flags field is present in the SIM, the current status of the <b>call forwarding flags</b> as they are currently stored on SIM, and the number incoming calls are forwarded to. The format is:	

#CFF – Call Forwarding Flags		SELINT 2
	#CFF: <enable>[,<status>,<fwdtonum >]	
AT#CFF=?	Test command returns the range of available values for parameter <enable>.	

### 3.5.7.1.90. Hang up call - #CHUP

#CHUP - Hang Up Call		SELINT 2
AT#CHUP	Execution command ends all active and held calls, also if a multi-party session is running. It also allows disconnecting of a data call from a CMUX instance different from the one that was used to start the data call.	
AT#CHUP=?	Test command returns the OK result code	

### 3.5.7.1.91. Set Encryption algorithm - #ENCALG

#ENCALG – Set Encryption Algorithm		SELINT 2
AT#ENCALG=[<encGSM>][,<encGPRS>]	<p>This command enables or disables the GSM and/or GPRS encryption algorithms supported by the module.</p> <p>Parameters:</p> <p>&lt;encGSM&gt;:</p> <ul style="list-style-type: none"> <li>0 – no GSM encryption algorithm</li> <li>1..7 - sum of integers each representing a specific GSM encryption algorithm:           <ul style="list-style-type: none"> <li>1 – A5/1</li> <li>2 – A5/2</li> <li>4 – A5/3</li> </ul> </li> <li>255 - reset the default values</li> </ul> <p>&lt;encGPRS&gt;:</p> <ul style="list-style-type: none"> <li>0 – no GPRS encryption algorithm</li> <li>1..3 - sum of integers each representing a specific GPRS encryption algorithm:           <ul style="list-style-type: none"> <li>1 – GEA1</li> <li>2 – GEA2</li> </ul> </li> <li>255 - reset the default values</li> </ul> <p>Note: the values are stored in NVM and available on following reboot.</p>	
AT#ENCALG?	Read command reports the currently selected <encGSM> and	

	<p>&lt;encGPRS&gt;, and the last used &lt;useGSM&gt; and &lt;useGPRS&gt; in the format:</p> <p><b>#ENCALG: &lt;encGSM&gt;,&lt;encGPRS&gt;,&lt;usedGSM&gt;,&lt;usedGPRS&gt;</b></p> <p>Parameters:</p> <p><b>&lt;usedGSM&gt;:</b></p> <ul style="list-style-type: none"> <li>0 – no GSM encryption algorithm</li> <li>1 – A5/1</li> <li>2 – A5/2</li> <li>4 – A5/3</li> </ul> <p><b>&lt;usedGPRS&gt;:</b></p> <ul style="list-style-type: none"> <li>0 – no GPRS encryption algorithm</li> <li>1 – GEA1</li> <li>2 – GEA2</li> </ul>
<b>AT#ENCALG=?</b>	<p>Test command reports the supported range of values for parameters in the format:</p> <p>&lt;encGSM&gt; and &lt;encGPRS&gt;.</p>
Example	<p>AT#ENCALG?  #ENCALG: 5,2,1,1</p> <p>OK</p> <p>AT#ENCALG=5,1  OK</p> <p><i>sets the GSM encryption algorithm A5/1 and A5/3, and the GPRS encryption algorithm GEA1.  It will be available at the next reboot.</i></p> <p>AT#ENCALG?  #ENCALG: 5,2,1,1</p> <p><i>The last two values indicate that the last used GSM encryption algorithm is A5/1 and the last used GPRS encryption algorithm is GEA1</i></p> <p><i>After reboot</i></p> <p>AT#ENCALG?  #ENCALG: 5,1,1,1</p>

### 3.5.7.1.92. RS485 enable/disable and configure - #RS485

#RS485 – RS485 enable/disable and configure		SELINT 2
AT#RS485=<enable> [,<gpio>]	<p>Set command enables/disables the half-RS485 standard using an additional configurable GPIO. The GPIO is set ON when the UART of module is transmitting and it is reset as soon as transmission is completed. Optionally it allows specifying the GPIO to use.</p> <p>Parameters:</p> <p>&lt;enable&gt; - enable/disable the simulation:            0 – disable half-RS485            1 – enable half-RS485</p> <p>Note: if gpio is omitted, the first available GPIO will be selected.</p> <p>&lt;gpio&gt; - GPIO pin number:            The test command returns the range of usable GPIO; this value depends on the hardware.            Note: if &lt;enable&gt;=0, &lt;gpio&gt; has no meaning and can be omitted, otherwise it is mandatory to set this parameter.</p> <p>Note: the value set by command is stored in NVM.</p> <p>Note: sending two consecutive enable commands without a disable between them will produce an error; the configuration will remain the first.</p>	
AT#RS485?	Read command reports the current state and the selected GPIO in the format: <b>#RS485: &lt; enable &gt;,&lt; gpio &gt;</b>	
AT#RS485=?	Test command reports the supported range of values for the parameters <enable> and <gpio>	

### 3.5.7.1.93. Read current network status - #RFSTS

#RFSTS – Read current network status		SELINT 2
AT#RFSTS	<p>Execution command reads current network status, in the format:</p> <p><b>#RFSTS:&lt;PLMN&gt;,&lt;ARFCN&gt;,&lt;RSSI&gt;,&lt;LAC&gt;,&lt;RAC&gt;,&lt;TXPWR&gt;,&lt;MM&gt;,&lt;RR&gt;,&lt;NOM&gt;,&lt;CID&gt;,&lt;IMSI&gt;,&lt;NetNameAsc&gt;,&lt;SD&gt;,&lt;ABND&gt;</b></p> <p>Where:</p> <p>&lt;PLMN&gt; - Country code and operator code(MCC, MNC)</p>	

	<p>&lt;ARFCN&gt; - GSM Assigned Radio Channel          &lt;RSSI&gt; - Received Signal Strength Indication          &lt;LAC&gt; - Localization Area Code          &lt;RAC&gt; - Routing Area Code          &lt;TXPWR&gt; - Tx Power          &lt;MM&gt; - Mobility Management State (NOT AVAILABLE)          &lt;RR&gt; - Radio Resource State (NOT AVAILABLE) &lt;NOM&gt; - Network Operator Mode          &lt;CID&gt; - Cell ID          &lt;IMSI&gt; - International Mobile Subscriber Identity          &lt;NetNameAsc&gt; - Operator name          &lt;SD&gt; - Service Domain          0 - No Service          1 - CS only          2 - PS only          3 - CS+PS            &lt;ABND&gt; - Active Band          1 - GSM 850          2 - GSM 900          3 - DCS 1800          4 - PCS 1900       </p>
AT#RFSTS=?	Test command tests for command existence.

### 3.5.7.1.94. Set CMUX Mode - #CMUXMODE

#CMUXMODE – CMUX Mode Set		SELINT 2
AT#CMUXMODE=<mode>	<p>Set command specifies the CMUX mode</p> <p>Parameter:  <b>&lt;mode&gt;:</b>            0 – Old break octet format (0x01) and ignore DTR feature is disabled (default)            1 – New break octet format (0x03) and ignore DTR feature is disabled            4 – Old break octet format (0x01) and ignore DTR feature is enabled            5 – New break octet format (0x03) and ignore DTR feature is enabled</p> <p>If the ignore DTR feature is enabled, then the DCE doesn't care the state and the transitions of the DTR line of the DTE. Otherwise a transition of the DTR instructs the DCE to disable the CMUX and switches to the normal command mode.</p> <p>Note: a software or hardware reset restores the default value.</p>	

<b>AT#CMUXMODE?</b>	Read command reports the currently selected <mode> in the format: <b>#CMUXMODE: &lt;mode&gt;</b>
<b>AT#CMUXMODE =?</b>	Test command reports the supported range of values for parameter <mode>  Response: <b>#CMUXMODE: (0,1,4,5)</b>

### 3.5.7.1.95. Connect physical ports to Service Access Points - #PORTCFG

<b>#PORTCFG – connect physical ports to Service Access Points</b>		<b>SELINT 2</b>
<b>AT#PORTCFG=&lt;Variant&gt;</b>	<p>AT#PORTCFG command allows to connect Service Access Points (software anchorage points) to the external physical ports giving a great flexibility. Examples of Service Access Points: AT Parser Instance #1,#2, #3, TT(Telit Trace).</p> <p>&lt;Variant&gt; parameter range: 0 ÷ 6; factory setting: 0. Please, refer to “GE-910 Family Ports Arrangements User Guide” document for a detailed explanation of all port configurations</p> <p>Note: in order to enable the set port configuration, the module has to be rebooted.</p>	
<b>AT#PORTCFG?</b>	<p>Read command reports:</p> <p>&lt;requested&gt; value shows the requested configuration that will be activated on the next power off /on of the module; &lt;active&gt; value shows the actual configuration.</p> <p><b>#PORTCFG: &lt;requested&gt;,&lt;active&gt;</b></p>	
<b>AT#PORTCFG=?</b>	<p>Test command reports a brief description of the supported ports arrangement solutions. For each &lt;Variant&gt; parameter value are displayed, on one row, the allowed couples formed by: a physical port and the logically connected internal software Access Point (AT, TT). On each row are reported the couples concerning both configurations: USB cable plugged into USB port or not plugged in.</p> <p>AT, indicated on each command row result, can be AT0, AT1, or AT2.</p>	

### 3.5.7.2. AT Run Commands

#### 3.5.7.2.1. Enable SMS Run AT Service - #SMSATRUN

#SMSATRUN – Enable SMS AT Run service		SELINT 2
AT#SMSATRUN=  <mod>	<p>Set command enables/disables the SMS AT RUN service.</p> <p>Parameter:  <b>&lt; mod &gt;</b>            0: Service Disabled            1: Service Enabled</p> <p>Note1: When the service is active on a specific AT instance (see AT#SMSATRUNCFG), that instance cannot be used for any other scope, except for OTA service that has the highest priority.            For example in the multiplexer request to establish the Instance, the request will be rejected.</p> <p>Note2: the current settings are stored in NVM.</p>	
AT#SMSATRUN?	<p>Read command returns the current settings of &lt;mode&gt; and the value of &lt;stat&gt; in the format:</p> <p># SMSATRUN: &lt;mod&gt;,&lt;stat&gt;</p> <p>where:  <b>&lt;stat&gt;</b> - service status            0 – not active            1 - active</p>	
AT#SMSATRUN =?	Test command returns the supported values for the SMSATRUN parameters	
Notes:	<ul style="list-style-type: none"> <li>• By default the SMS ATRUN service is disabled</li> </ul> <p>It can be activated either by the command AT#SMSATRUN or receiving a special SMS that can be sent from a Telit server.</p>	

#### 3.5.7.2.2. Set SMS Run AT Service parameters - #SMSATRUNCFG

#SMSATRUNCFG – Set SMS AT Run Parameters	
AT#SMSATRUNCFG=  <instance> [,<urcmode> [,<timeout>]]	<p>Set command configures the SMS AT RUN service.</p> <p>Parameter:  <b>&lt;instance&gt;</b>:            AT instance that will be used by the service to run the AT Command. Range 2 - 3, default 3.</p> <p><b>&lt;urcmode&gt;:</b></p>

#SMSATRUNCFG – Set SMS AT Run Parameters	
	<p>0 – disable unsolicited message      1 - enable an unsolicited message when an AT command is requested via SMS (default).</p> <p>When unsolicited is enabled, the AT Command requested via SMS is indicated to TE with unsolicited result code:</p> <pre>#SMSATRUN: &lt;Text&gt;</pre> <p>e.g.:  <code>#SMSATRUN: AT+CGMR;+CGSN;+GSN;+CCLK</code></p> <p>Unsolicited is dumped on the instance that requested the service activation.</p> <p><b>&lt;timeout&gt;:</b>      It defines in minutes the maximum time for a command execution. If timeout expires the module will be rebooted. Range 1 – 60, default 5.</p> <p>Note 1: the current settings are stored in NVM.</p> <p>Note 2: the instance used for the SMS AT RUN service is the same used for the EvMoni service. Therefore, when the #SMSATRUNCFG sets the &lt;instance&gt; parameter, the change is reflected also in the &lt;instance&gt; parameter of the #ENAEVMONICFG command, and viceversa.</p> <p>Note 3: the set command returns ERROR if the command AT#ENAEVMONI? returns 1 as &lt;mod&gt; parameter or the command AT#SMSATRUN? returns 1 as &lt;mod&gt; parameter</p>
AT#SMSATRUNCFG?	<p>Read command returns the current settings of parameters in the format:</p> <pre>#SMSATRUNCFG:&lt;instance&gt;,&lt;urcmod&gt;,&lt;timeout&gt;</pre>
AT#SMSATRUNCFG=?	<p>Test command returns the supported values for the SMSATRUNCFG parameters</p>

### 3.5.7.2.3. SMS AT Run White List - #SMSATWL

#SMSATWL – SMS AT Run White List		SELINT 2
AT#SMSATWL= <action> ,<index> [,<entryType> [,<string>]]	<p>Set command to handle the white list.</p> <p><b>&lt;action &gt;:</b></p> <ul style="list-style-type: none"> <li>0 – Add an element to the WhiteList</li> <li>1 – Delete an element from the WhiteList</li> <li>2 – Print all elements of the WhiteList</li> </ul>	

#SMSATWL – SMS AT Run White List	SELINT 2
	<p>&lt;index&gt;: Index of the WhiteList. Range 1-8</p> <p>&lt;entryType&gt;:            0 – Phone Number            1 – Password</p> <p>NOTE: A maximum of two Password Entry can be present at same time in the white List</p> <p>&lt;string&gt;: string parameter enclosed between double quotes containing or the phone number or the password</p> <p>Phone number shall contain numerical characters and/or the character “+” at the beginning of the string and/or the character “*” at the end of the string.            Password shall be 16 characters length</p> <p>NOTE: When the character “*” is used, it means that all the numbers that begin with the defined digit are part of the white list.</p> <p>E.g.  “+39*” All Italian users can ask to run AT Command via SMS  “+39349*” All vodafone users can ask to run AT Command via SMS.</p>
AT#SMSATWL?	Read command returns the list elements in the format:  <b>#SMSATWL: [&lt;entryType&gt;,&lt;string&gt;]</b>
AT#SMSATWL=?	Test command returns the supported values for the parameter <action>, <index> and <entryType>

### 3.5.7.2.4. Set TCP Run AT Service parameter - #TCPATRUNCFG

#TCPATRUNCFG– Set TCP AT Run Service Parameters	SELINT 2
AT#TCPATRUNCFG= <connId> ,<instance> ,<tcpPort> ,<tcpHostPort> ,<tcpHost> [,<urcmode> [,<timeout> [,<authMode> [,<retryCnt> [,<retryDelay>]]]]]	Set command configures the TCP AT RUN service Parameters:  <connId> socket connection identifier. Default 1.  Range 1..6. This parameter is mandatory. <instance>: AT instance that will be used by the service to run the AT Command. Default 2. Range 2 - 3. This parameter is mandatory.  <tcpPort>

<b>#TCPATRUNCFG – Set TCP AT Run Service Parameters</b>	<b>SELINT 2</b>
---	-----------------

<p>Tcp Listen port for the connection to the service in server mode. Default 1024. Range 1...65535. This parameter is mandatory.</p> <p><b>&lt;tcpHostPort&gt;</b> Tcp remote port of the Host to connect to, in client mode. Default 1024. Range 1...65535. This parameter is mandatory.</p> <p><b>&lt;tcpHost&gt;</b> IP address of the Host, string type. This parameter can be either:  <ul style="list-style-type: none"> <li>- any valid IP address in the format: “xxx.xxx.xxx.xxx”</li> <li>- any host name to be solved with a DNS query</li> </ul> This parameter is mandatory. Default “”.</p> <p><b>&lt;urcmod&gt;:</b>  0 – disable unsolicited messages  1 - enable an unsolicited message when the TCP socket is connected or disconnect ( default ).</p> <p>When unsolicited is enabled, an asynchronous TCP Socket connection is indicated to TE with unsolicited result code:</p> <p>#TCPATRUN: &lt;iphostaddress&gt;</p> <p>When unsolicited is enabled, the TCP socket disconnection is indicated to TE with unsolicited result code:</p> <p>#TCPATRUN: &lt;DISCONNECT&gt;</p> <p>Unsolicited is dumped on the instance that requested the service activation.</p> <p><b>&lt;timeout&gt;:</b> Define in minutes the maximum time for a command execution. If timeout expires the module will be rebooted. The default value is 5 minutes. Range 1...5.</p> <p><b>&lt;authMode&gt;:</b> determines the authentication procedure in server mode:  0 – ( default ) when connection is up, username and password (in this order and each of them followed by a Carriage Return) have to be sent to the module before the first AT command.  1 – when connection is up, the user receives a request for username and, if username is correct, a request for password. Then a message of "Login successfull" will close authentication phase.</p>
---

#TCPATRUNCFG – Set TCP AT Run Service Parameters	SELINT 2
	<p>Note: if username and/or password are not allowed (see AT#TCPATRUNAUTH) the connection will close immediately.</p> <p><b>&lt;retryCnt&gt;:</b> in client mode, at boot or after a socket disconnection, this parameter represents the number of attempts that are made in order to re-connect to the Host. Default: 0. Range 0...5.</p> <p><b>&lt;retryDelay&gt;:</b> in client mode, delay between one attempt and the other. In minutes. Default: 2. Range 1...3600.</p> <p>Note2: the current settings are stored in NVM.</p> <p>Note3: to start automatically the service when the module is powered-on, the automatic PDP context activation has to be set (see AT#SGACTCFG command).</p> <p>Note 4: the set command returns ERROR if the command AT#TCPATRUNL? returns 1 as &lt;mod&gt; parameter or the command AT#TCPATRUND? returns 1 as &lt;mod&gt; parameter</p>
AT#TCPATRUNCFG?	<p>Read command returns the current settings of parameters in the format:</p> <p><b>#TCPATRUNCFG:</b>  <b>&lt;connId&gt;,&lt;instance&gt;,&lt;tcpPort&gt;,&lt;tcpHostPort&gt;,&lt;tcpHost&gt;,&lt;urcmode&gt;,&lt;timeout&gt;,&lt;authMode&gt;,&lt;retryCnt&gt;,&lt;retryDelay&gt;</b></p>
AT#TCPATRUNCFG=?	<p>Test command returns the supported values for the TCPATRUNCFG parameters</p>

### 3.5.7.2.5. TCP Run AT Service in listen (server) mode - #TCPATRUNL

#TCPATRUNL – Enables TCP AT Run Service in listen (server) mode	SELINT 2
AT#TCPATRUNL=<mod>	<p>Set command enables/disables the TCP AT RUN service in server mode. When this service is enabled, the module tries to put itself in TCP listen state.</p> <p>Parameter:  <b>&lt; mod &gt;</b></p> <p>0: Service Disabled          1: Service Enabled</p> <p>Note1: If SMSATRUN is active on the same instance (see AT#TCPATRUNCFG) the command will return ERROR.</p>

#TCPATRUNL – Enables TCP AT Run Service in listen (server) mode	SELINT 2
	<p>Note2: when the service is active it is on a specific AT instance (see AT#TCPATRUNCFG), that instance cannot be used for any other scope. For example, if the multiplexer requests to establish the Instance, the request will be rejected.</p> <p>Note3: the current settings are stored in NVM.</p> <p>Note4: to start automatically the service when the module is powered-on, the automatic PDP context activation has to be set (see AT#SGACTCFG command).</p>
AT#TCPATRUNL?	<p>Read command returns the current settings of &lt;mode&gt; and the value of &lt;stat&gt; in the format:</p> <p><b>#TCPATRUNL: &lt;mod&gt;,&lt;stat&gt;</b></p> <p>where:  <b>&lt;stat&gt;</b> - connection status      0 – not in listen      1 - in listen or active</p>
AT#TCPATRUNL =?	Test command returns the supported values for the TCPATRUNL parameters

### 3.5.7.2.6. TCP AT Run Firewall List - #TCPATRUNFRWL

# TCPATRUNFRWL – TCP AT Run Firewall List	SELINT 2
AT#TCPATRUNFRWL = <action>, <ip_addr>, <net_mask>	<p>Set command controls the internal firewall settings for the TCPATRUN connection.</p> <p>Parameters:</p> <p>&lt;action&gt; - command action      0 - remove selected chain      1 - add an <b>ACCEPT</b> chain      2 - remove all chains (<b>DROP</b> everything); &lt;ip_addr&gt; and &lt;net_mask&gt; has no meaning in this case.</p> <p>&lt;ip_addr&gt; - remote address to be added into the <b>ACCEPT</b> chain; string type, it can be any valid IP address in the format:      xxx.xxx.xxx.xxx</p> <p>&lt;net_mask&gt; - mask to be applied on the &lt;ip_addr&gt;; string type, it can be any valid IP address mask in the format: xxx.xxx.xxx.xxx</p> <p>Command returns <b>OK</b> result code if successful.</p> <p>Firewall general policy is <b>DROP</b>, therefore all packets that are not included into an <b>ACCEPT</b> chain rule will be silently discarded.</p>

# TCPATRUNFRWL – TCP AT Run Firewall List	SELINT 2
	<p>When a packet comes from the IP address <b>incoming_IP</b>, the firewall chain rules will be scanned for matching with the following criteria:</p> <p><b>incoming_IP &amp; &lt;net_mask&gt; = &lt;ip_addr&gt; &amp; &lt;net_mask&gt;</b></p> <p>If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.</p> <p>Note1: A maximum of 5 firewall can be present at same time in the List.</p> <p>Note2: the firewall list is saved in NVM</p>
AT# TCPATRUNFRWL?	<p>Read command reports the list of all <b>ACCEPT</b> chain rules registered in the Firewall settings in the format:</p> <pre>#TCPATRUNFRWL: &lt;ip_addr&gt;,&lt;net_mask&gt; #TCPATRUNFRWL: &lt;ip_addr&gt;,&lt;net_mask&gt; ... OK</pre>
AT#TCPATRUNFRWL=?	Test command returns the allowed values for parameter <b>&lt;action&gt;</b> .

### 3.5.7.2.7. TCP AT Run Authentication Parameters List - #TCPATRUNAUTH

# TCPATRUNAUTH – TCP AT Run Authentication Parameters List	SELINT 2
AT# TCPATRUNAUTH = <action>, <userid>, <passw>	<p>Execution command controls the authentication parameters for the TCPATRUN connection.</p> <p>Parameters:</p> <p>&lt;<b>action</b>&gt; - command action      0 - remove selected chain      1 - add an <b>ACCEPT</b> chain      2 - remove all chains (<b>DROP</b> everything); &lt;<b>userid</b>&gt; and &lt;<b>passw</b>&gt; has no meaning in this case.</p> <p>&lt;<b>userid</b>&gt; - user to be added into the <b>ACCEPT</b> chain; string type, maximum length 50</p> <p>&lt;<b>passw</b>&gt; - password of the user on the &lt;<b>userid</b>&gt;; string type, maximum length 50</p> <p>Command returns <b>OK</b> result code if successful.</p> <p>Note1: A maximum of 3 entry (password and userid) can be present at same time in the List.</p>

# TCPATRUNAUTH – TCP AT Run Authentication Parameters List	SELINT 2
	Note2: the Authentication Parameters List is saved in NVM.
<b>AT#TCPATRUNAUTH?</b>	Read command reports the list of all ACCEPT chain rules registered in the Authentication settings in the format:  <b>#TCPATRUNAUTH: &lt;user_id&gt;,&lt;passw&gt;</b> <b>#TCPATRUNAUTH: &lt;user_id&gt;,&lt;passw&gt;</b> .... <b>OK</b>
<b>AT#TCPATRUNAUTH =?</b>	Test command returns the allowed values for parameter <action>.

### 3.5.7.2.8. TCP AT Run in dial (client) mode - #TCPATRUND

#TCPATRUND – Enables TCP Run AT Service in dial (client) mode	SELINT 2
<b>AT#TCPATRUND=&lt;mod&gt;</b>	<p>Set command enables/disables the TCP AT RUN service in client mode. When this service is enabled, the module tries to open a connection to the Host (the Host is specified in AT#TCPATRUNCFG).</p> <p>Parameter:  <b>&lt; mod &gt;</b></p> <ul style="list-style-type: none"> <li>0: Service Disabled</li> <li>1: Service Enabled</li> </ul> <p>Note1: If SMSATRUN is active on the same instance (see AT#TCPATRUNCFG) the command will return ERROR.</p> <p>Note2: when the service is active it is on a specific AT instance (see AT#TCPATRUNCFG), that instance cannot be used for any other scope. For example if the multiplexer request to establish the Instance, the request will be rejected.</p> <p>Note3: the current setting are stored in NVM</p> <p>Note4: to start automatically the service when the module is powered-on, the automatic PDP context activation has to be set (see AT#SGACTCFG command).</p> <p>Note5: if the connection closes or at boot, if service is enabled and context is active, the module will try to reconnect for the number of attempts specified in AT#TCPATRUNCFG; also the delay between one attempt and the other will be the one specified in AT#TCPATRUNCFG.</p>
<b>AT# TCPATRUND?</b>	Read command returns the current settings of <mode> and the value of <stat> in the format:

#TCPATRUND – Enables TCP Run AT Service in dial (client) mode	SELINT 2
	<b>#TCPATRUND: &lt;mod&gt;,&lt;stat&gt;</b>  where: <stat> - connection status 0 - not connected 1 – connected or connecting at socket level 2 - not connected but still trying to connect, attempting every delay time (specified in AT#TCPATRUNCFG)
AT#TCPATRUND =?	Test command returns the supported values for the TCPATRUND parameters

### 3.5.7.2.9. Closing TCP Run AT Socket - #TCPATRUNCLOSE

#TCPATRUNCLOSE – Closes TCP Run AT Socket	SELINT 2
AT#TCPATRUNCLOSE	Closes the socket used by TCP ATRUN service.  Note: TCP ATRUN status is still enabled after this command, so the service re-starts automatically.
AT#TCPATRUNCLOSE =?	Test command returns OK

### 3.5.7.2.10. TCP AT Run Command Sequence - #TCPATCMDSEQ

#TCPATCMDSEQ – For TCP Run AT Service, allows the user to give AT commands in sequence	SELINT 2
AT#TCPATCMDSEQ= <mod>	Set command enable/disable, for TCP Run AT service, a feature that allows giving more than one AT command without waiting for responses. It does not work with commands that uses the prompt '>' to receive the message body text (e.g. "at+cmgs", "at#semail")  Parameter: <b>&lt; mod &gt;</b> 0: Service Disabled (default) 1: Service Enabled
AT# TCPATCMDSEQ?	Read command returns the current settings of parameters in the format:  <b>#TCPATCMDSEQ: &lt;mod&gt;</b>
AT# TCPATCMDSEQ =?	Test command returns the supported values for the TCPATCMDSEQ parameters

### 3.5.7.2.11. TCP Run AT service to a serial port - #TCPATCONSER

#TCPATCONSER – Connects the TCP Run AT service to a serial port	SELINT 2
AT#TCPATCONSER= <port>,<rate>	Set command sets the TCP Run AT in transparent mode, in order to have direct access to the serial port specified. Data will be transferred directly,

#TCPATCONSER – Connects the TCP Run AT service to a serial port	SELINT 2
	<p>without being elaborated, between the TCP Run AT service and the serial port specified.          If the CMUX protocol is running the command will return ERROR.</p> <p>Parameter:  <b>&lt;port&gt;</b>          0 – 1. Serial port to connect to.</p> <p><b>&lt;rate&gt;</b>          baud rate for data transfer. Allowed values are          300,1200,2400,4800,9600,19200,38400,57600,115200.</p> <p>Note1: the command has to be issued from the TCP ATRUN instance          Note2: After this command has been issued, if no error has occurred, then a “CONNECT” will be returned by the module to advise that the TCP ATRUN instance is in <i>online mode</i> and connected to the port specified.          Note3: To exit from online mode and close the connection, the escape sequence (+++) has to be sent on the TCP ATRUN instance</p>
<b>AT# TCPATCONSER =?</b>	Test command returns the supported values for the TCPATCONSER parameters

### 3.5.7.2.12. Run AT command execution - #ATRUNDELAY

#ATRUNDELAY – Set the delay on Run AT command execution	SELINT 2
<b>AT#ATRUNDELAY= &lt;srv&gt;,&lt;delay&gt;</b>	<p>Set command enables the use of a delay before the execution of AT command received by Run AT service (TCP and SMS). It affects just AT commands given through Run AT service.</p> <p><b>&lt;srv&gt;</b>          0 – TCP Run AT service          1 - SMS Run AT service</p> <p><b>&lt;delay&gt;</b> Value of the delay, in seconds. Range 0..30.          Default value 0 for both services (TCP and SMS).</p> <p>Note1 - The use of the delay is recommended to execute some AT commands that require network interaction or switch between GSM and GPRS services. For more details see the RUN AT User Guide.</p> <p>Note2: The delay is valid till a new AT#ATRUNDELAY is set.</p>
<b>AT#ATRUNDELAY?</b>	Read command returns the current settings of parameters in the format:  <b>#ATRUNDELAY: 0, &lt;delayTCP&gt;</b> <b>#ATRUNDELAY: 1, &lt;delaySMS&gt;</b>

#ATRUNDELAY – Set the delay on Run AT command execution		SELINT 2
	OK	
AT#ATRUNDELAY=?	Test command returns the supported values for the ATRUNDELAY parameters	

### 3.5.7.3. Event Monitor Commands

#### 3.5.7.3.1. Enable EvMoni Service - #ENAEVMONI

#ENAEVMONI – Enable EvMoni Service		SELINT 2
AT#ENAEVMONI=<mod>	<p>Set command enables/disables the EvMoni service.</p> <p>Parameter:  <b>&lt;mod&gt;</b></p> <p>0: Service Disabled (default)      1: Service Enabled</p> <p>Note1: When the service is active on a specific AT instance, that instance cannot be used for any other scope, except for OTA service that has the highest priority. For example in the multiplexer request to establish the Instance, the request will be rejected.</p> <p>Note2: the current settings are stored in NVM.</p>	
AT#ENAEVMONI?	<p>Read command returns the current settings of &lt;mode&gt; and the value of &lt;stat&gt; in the format:</p> <p># ENAEVMONI: &lt;mod&gt;,&lt;stat&gt;</p> <p>where:  <b>&lt;stat&gt;</b> - service status      0 – not active (default)      1 - active</p>	
AT#ENAEVMONI=?	Test command returns the supported values for the ENAEVMONI parameters	

#### 3.5.7.3.2. EvMoni Service parameter - #ENAEVMONICFG

#ENAEVMONICFG – Set EvMoni Service Parameters		SELINT 2
AT#ENAEVMONICFG=<instance>[,<urcmode>[,<timeout>]]	<p>Set command configures the EvMoni service.</p> <p>Parameter:  <b>&lt;instance&gt;:</b>          AT instance that will be used by the service to run the AT Command. Range 2 - 3. (Default: 3)</p>	

#ENAEVMONICFG – Set EvMoni Service Parameters	SELINT 2
	<p><b>&lt;urcmod&gt;:</b>            0 – disable unsolicited message            1 - enable an unsolicited message when an AT command is executed after an event is occurred (default)</p> <p>When unsolicited is enabled, the AT Command is indicated to TE with unsolicited result code:</p> <p>#EVMONI: &lt;Text&gt;</p> <p>e.g.:  #EVMONI: AT+CGMR;+CGSN;+GSN;+CCLK</p> <p>Unsolicited is dumped on the instance that requested the service activation.</p> <p><b>&lt;timeout&gt;:</b>  It defines in minutes the maximum time for a command execution. If timeout expires the module will be rebooted. (Default: 5)</p> <p>Note 1: the current settings are stored in NVM.</p> <p>Note 2: the instance used for the EvMoni service is the same used for the SMS AT RUN service. Therefore, when the #ENAEVMONICFG sets the &lt;instance&gt; parameter, the change is reflected also in the &lt;instance&gt; parameter of the #SMSATRUNCFG command, and viceversa.</p> <p>Note 3: the set command returns ERROR if the command AT#ENAEVMONI? returns 1 as &lt;mod&gt; parameter or the command AT#SMSATRUN? returns 1 as &lt;mod&gt; parameter</p>
AT#ENAEVMONICFG?	Read command returns the current settings of parameters in the format:  #ENAEVMONICFG:<instance>,<urcmod>,<timeout>
AT# ENAEVMONICFG =?	Test command returns the supported values for the ENAEVMONICFG parameters

### 3.5.7.3.3. Event Monitoring - #EVMONI

#EVMONI – Set the single Event Monitoring	SELINT 2
AT#EVMONI= <label>, <mode>, [<paramType> ,<param>]	<p>Set command enables/disables the single event monitoring, configures the related parameter and associates the AT command</p> <p><b>&lt;label&gt;:</b> string parameter (that has to be enclosed between double quotes) indicating the event under monitoring. It can assume the following values:</p> <ul style="list-style-type: none"> <li>• VBATT - battery voltage monitoring (not yet implemented)</li> <li>• DTR - DTR monitoring (not yet implemented)</li> <li>• ROAM - roaming monitoring</li> </ul>

#EVMONI – Set the single Event Monitoring	SELINT 2
<ul style="list-style-type: none"> <li>• CONTDEACT - context deactivation monitoring</li> <li>• RING - call ringing monitoring</li> <li>• STARTUP – module start-up monitoring</li> <li>• REGISTERED – network registration monitoring</li> <li>• GPIO1 – monitoring on a selected GPIO in the GPIO range</li> <li>• GPIO2 – monitoring on a selected GPIO in the GPIO range</li> <li>• GPIO3 – monitoring on a selected GPIO in the GPIO range</li> <li>• GPIO4 – monitoring on a selected GPIO in the GPIO range</li> <li>• GPIO5 – monitoring on a selected GPIO in the GPIO range</li> <li>• ADCH1 – ADC High Voltage monitoring</li> <li>• ADCL1 – ADC Low Voltage monitoring</li> <li>• DTMF1 – monitoring on user defined DTMF string</li> <li>• DTMF2 – monitoring on user defined DTMF string</li> <li>• DTMF3 – monitoring on user defined DTMF string</li> <li>• DTMF4 – monitoring on user defined DTMF string</li> <li>• CONSUME1 – used to define an action to be used in consume functionality (see parameter &lt;action_id&gt; in #CONSUMECFG command)</li> <li>• CONSUME2 – used to define an action to be used in consume functionality (see parameter &lt;action_id&gt; in #CONSUMECFG command)</li> <li>• CONSUME3 – used to define an action to be used in consume functionality (see parameter &lt;action_id&gt; in #CONSUMECFG command)</li> <li>• CONSUME4 – used to define an action to be used in consume functionality (see parameter &lt;action_id&gt; in #CONSUMECFG command)</li> <li>• CONSUME5 – used to define an action to be used in consume functionality (see parameter &lt;action_id&gt; in #CONSUMECFG command)</li> </ul> <p><b>&lt;mode&gt;:</b></p> <p>0 – disable the single event monitoring (default)          1 – enable the single event monitoring</p> <p><b>&lt;paramType&gt;:</b> numeric parameter indicating the type of parameter contained in <b>&lt;param&gt;</b>. The 0 value indicates that <b>&lt;param&gt;</b> contains the AT command string to execute when the related event has occurred. Other values depend from the type of event.</p> <p><b>&lt;param&gt;:</b> it can be a numeric or string value depending on the value of <b>&lt;paramType&gt;</b> and on the type of event.          If <b>&lt;paramType&gt;</b> is 0, then <b>&lt;param&gt;</b> is a string containing the AT command:</p> <ul style="list-style-type: none"> <li>• It has to be enclosed between double quotes</li> <li>• It has to start with the 2 chars AT (or at)</li> <li>• If the string contains the character ", then it has to be replaced with the 3 characters \22</li> <li>• the max string length is 96 characters</li> <li>• if it is an empty string, then the AT command is erased</li> </ul>	

#EVMONI – Set the single Event Monitoring	SELINT 2
	<ul style="list-style-type: none"> <li>• If &lt;label&gt; is VBATT, &lt;paramType&gt; can assume values in the range 0 - 2.             <ul style="list-style-type: none"> <li>◦ if &lt;paramType&gt; = 1, &lt;param&gt; indicates the battery voltage threshold in the range 0 – 500, where one unit corresponds to 10 mV (therefore 500 corresponds to 5 V). (Default: 0)</li> <li>◦ if &lt;paramType&gt; = 2, &lt;param&gt; indicates the time interval in seconds after that the voltage battery under the value specified with &lt;paramType&gt; = 1 causes the event. The range is 0 – 255. (Default: 0)</li> </ul> </li> <li>• If &lt;label&gt; is DTR, &lt;paramType&gt; can assume values in the range 0 - 2.             <ul style="list-style-type: none"> <li>◦ if &lt;paramType&gt; = 1, &lt;param&gt; indicates the status high or low under monitoring. The values are 0 (low) and 1 (high). (Default: 0)</li> <li>◦ if &lt;paramType&gt; = 2, &lt;param&gt; indicates the time interval in seconds after that the DTR in the status specified with &lt;paramType&gt; = 1 causes the event. The range is 0 – 255. (Default: 0)</li> </ul> </li> <li>• If &lt;label&gt; is ROAM, &lt;paramType&gt; can assume only the value 0. The event under monitoring is the roaming state.</li> <li>• If &lt;label&gt; is CONTDEACT, &lt;paramType&gt; can assume only the value 0. The event under monitoring is the context deactivation.</li> <li>• If &lt;label&gt; is RING, &lt;paramType&gt; can assume values in the range 0 - 1.             <ul style="list-style-type: none"> <li>◦ if &lt;paramType&gt; = 1, &lt;param&gt; indicates the numbers of call rings after that the event occurs. The range is 1-50. (Default: 1)</li> </ul> </li> <li>• If &lt;label&gt; is STARTUP, &lt;paramType&gt; can assume only the value 0. The event under monitoring is the module start-up.</li> <li>• If &lt;label&gt; is REGISTERED, &lt;paramType&gt; can assume only the value 0. The event under monitoring is the network registration (to home network or in roaming) after the start-up and the SMS ordering.</li> <li>• If &lt;label&gt; is GPIOX, &lt;paramType&gt; can assume values in the range 0 - 3.             <ul style="list-style-type: none"> <li>◦ if &lt;paramType&gt; = 1, &lt;param&gt; indicates the GPIO pin number; supported range is from 1 to a value that depends on the hardware. (Default: 1)</li> <li>◦ if &lt;paramType&gt; = 2, &lt;param&gt; indicates the status high or low under monitoring. The values are 0 (low) and 1 (high) . (Default: 0)</li> <li>◦ if &lt;paramType&gt; = 3, &lt;param&gt; indicates the time interval in seconds after that the selected GPIO pin in the status specified with &lt;paramType&gt; = 1 causes the event. The range is 0 – 255. (Default: 0)</li> </ul> </li> <li>• If &lt;label&gt; is ADCH1, &lt;paramType&gt; can assume values in the range 0 - 3.             <ul style="list-style-type: none"> <li>◦ if &lt;paramType&gt; = 1, &lt;param&gt; indicates the ADC pin number; supported range is from 1 to a value that depends on the hardware. (Default: 1)</li> <li>◦ if &lt;paramType&gt; = 2, &lt;param&gt; indicates the ADC High voltage threshold in the range 0 – 2000 mV. (Default: 0)</li> <li>◦ if &lt;paramType&gt; = 3, &lt;param&gt; indicates the time interval in seconds after that the selected ADC pin above the value specified</li> </ul> </li> </ul>

#EVMONI – Set the single Event Monitoring	SELINT 2
	<p>with &lt;paramType&gt; = 1 causes the event. The range is 0 – 255. (Default: 0)</p> <ul style="list-style-type: none"> <li>• If &lt;label&gt; is ADCL1, &lt;paramType&gt; can assume values in the range 0 - 3.                     <ul style="list-style-type: none"> <li>◦ if &lt;paramType&gt; = 1, &lt;param&gt; indicates the ADC pin number; supported range is from 1 to a value that depends on the hardware. (Default: 1)</li> <li>◦ if &lt;paramType&gt; = 2, &lt;param&gt; indicates the ADC Low voltage threshold in the range 0 – 2000 mV. (Default: 0)</li> <li>◦ if &lt;paramType&gt; = 3, &lt;param&gt; indicates the time interval in seconds after that the selected ADC pin under the value specified with &lt;paramType&gt; = 1 causes the event. The range is 0 – 255. (Default: 0)</li> </ul> </li> <li>• If &lt;label&gt; is DTMFX, &lt;paramType&gt; can assume values in the range 0 - 2.                     <ul style="list-style-type: none"> <li>◦ if &lt;paramType&gt; = 1, &lt;param&gt; indicates the DTMF string; the single DTMF characters have to belong to the range ((0-9),#,*,(A-D)); the maximum number of characters in the string is 15</li> <li>◦ if &lt;paramType&gt; = 2, &lt;param&gt; indicates the timeout in milliseconds. It is the maximum time interval within which a DTMF tone must be detected after detecting the previous one, to be considered as belonging to the DTMF string. The range is (500 – 5000). (Default: 1000)</li> </ul> </li> <li>• If &lt;label&gt; is CONSUMEX, &lt;paramType&gt; can assume only the value 0.</li> </ul> <p>Note: the DTMF string monitoring is available only if the DTMF decode has been enabled (see #DTMF command)</p>
AT# EVMONI?	Read command returns the current settings for each event in the format:  <b>#EVMONI: &lt;label&gt;,&lt;mode&gt;,&lt;param0&gt;[,&lt;param1&gt;[,&lt;param2&gt;[,&lt;param3&gt;]]]</b>  Where <param0>, <param1>, <param2> and <param3> are defined as before for <param> depending on <label> value
AT#EVMONI=?	Test command returns values supported as a compound value

### 3.5.7.3.4. Send Message - #CMGS

#CMGS - Send Message	SELINT 2
(PDU Mode) AT#CMGS=<length>,<pdu>	<p><b>(PDU Mode)</b></p> <p>Execution command sends to the network a message.</p> <p>Parameter:</p> <p>&lt;length&gt; - length of the PDU to be sent in bytes (excluding the SMSC address octets). 7..164</p> <p>&lt;pdu&gt; - PDU in hexadecimal format (each octet of the PDU is given as two IRA character long hexadecimal number) and given in one line.</p>

#CMGS - Send Message	SELINT 2
	<p>Note: when the length octet of the SMSC address (given in the &lt;pdu&gt;) equals zero, the SMSC address set with command +CSCA is used; in this case the SMSC Type-of-Address octet shall not be present in the &lt;pdu&gt;.</p> <p>If message is successfully sent to the network, then the result is sent in the format:</p> <p><b>#CMGS: &lt;mr&gt;</b></p> <p>where</p> <p>&lt;mr&gt; - message reference number; 3GPP TS 23.040 TP-Message-Reference in integer format.</p> <p>Note: if message sending fails for some reason, an error code is reported.</p>
(Text Mode) <b>AT#CMGS=&lt;da&gt;,&lt;text&gt;</b>	<p align="center"><b>(Text Mode)</b></p> <p>Execution command sends to the network a message.</p> <p>Parameters:</p> <p>&lt;da&gt; - destination address, string type represented in the currently selected character set (see +CSCS).</p> <p>&lt;text&gt; - text to send</p> <p>The entered text should be enclosed between double quotes and formatted as follows:</p> <ul style="list-style-type: none"> <li>- if current &lt;dcs&gt; (see +CSMP) indicates that GSM03.38 default alphabet is used and current &lt;fo&gt; (see +CSMP) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set, then ME/TA converts the entered text into GSM alphabet, according to GSM 27.005, Annex A.</li> <li>- if current &lt;dcs&gt; (see +CSMP) indicates that 8-bit or UCS2 data coding scheme is used or current &lt;fo&gt; (see +CSMP) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set, the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. the ‘asterisk’ will be entered as <b>2A</b> (<b>IRA50</b> and <b>IRA65</b>) and this will be converted to an octet with integer value <b>0x2A</b>)</li> </ul> <p>If message is successfully sent to the network, then the result is sent in the format:</p> <p><b>#CMGS: &lt;mr&gt;</b></p> <p>where</p> <p>&lt;mr&gt; - message reference number; 3GPP TS 23.040 TP-Message-Reference in integer format.</p>

#CMGS - Send Message		SELINT 2
		Note: if message sending fails for some reason, an error code is reported.
<b>AT#CMGS=?</b>		Test command returns the <b>OK</b> result code.
Note		To avoid malfunctions it is suggested to wait for the #CMGS: <mr> or #CMS <b>ERROR: &lt;err&gt;</b> response before issuing further commands.
Reference		GSM 27.005

### 3.5.7.3.5. Write Message To Memory - #CMGW

#CMGW - Write Message To Memory		SELINT 2
(PDU Mode) <b>AT#CMGW=</b> <length>,<pdu>	<b>(PDU Mode)</b> Execution command writes in the <memw> memory storage a new message.  Parameter: <length> - length in bytes of the PDU to be written. 7..164 <pdu> - PDU in hexadecimal format (each octet of the PDU is given as two IANA character long hexadecimal number) and given in one line.  If message is successfully written in the memory, then the result is sent in the format:  <b>#CMGW: &lt;index&gt;</b>  where: <index> - message location index in the memory <memw>.  If message storing fails for some reason, an error code is reported.	
(Text Mode) <b>AT#CMGW=&lt;da&gt;</b> ,<text>	<b>(Text Mode)</b> Execution command writes in the <memw> memory storage a new message.  Parameters: <da> - destination address, string type represented in the currently selected character set (see +CSCS). <text> - text to write  The entered text should be enclosed between double quotes and formatted as follows:  - if current <dcs> (see +CSMP) indicates that GSM03.38 default alphabet is used and current <fo> (see +CSMP) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set, then ME/TA converts the entered text into GSM alphabet, according to GSM 27.005, Annex A. - if current <dcs> (see +CSMP) indicates that 8-bit or UCS2 data coding scheme is used or current <fo> (see +CSMP) indicates that 3GPP TS 23.040	

#CMGW - Write Message To Memory		SELINT 2
	<p>TP-User-Data-Header-Indication is set, the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. the ‘asterisk’ will be entered as <b>2A</b> (<b>IRA50</b> and <b>IRA65</b>) and this will be converted to an octet with integer value <b>0x2A</b>)</p> <p>If message is successfully written in the memory, then the result is sent in the format:</p> <p><b>#CMGW: &lt;index&gt;</b>  where:  <b>&lt;index&gt;</b> - message location index in the memory <b>&lt;memw&gt;</b>.</p> <p>If message storing fails for some reason, an error code is reported.</p>	
<b>AT#CMGW=?</b>	Test command returns the <b>OK</b> result code.	
Reference	GSM 27.005	
Note	To avoid malfunctions is suggested to wait for the <b>#CMGW: &lt;index&gt;</b> or <b>+CMS ERROR: &lt;err&gt;</b> response before issuing further commands.	

### 3.5.7.4. CONSUME Commands

#### 3.5.7.4.1. Configure consume parameters - #CONSUMECFG

#CONSUMECFG – configure consume parameters		SELINT 2
AT#CONSUMECFG=<rule_id>[,<service_type>[,<rule_enable>[,<period>[,<limit_amount>[,<action_id>]]]]]	<p>This command sets the parameters related to the consume functionality</p> <p>Parameters:</p> <p><b>&lt;rule_id&gt;</b>  Index of the rule to apply to a defined <b>&lt;service_type&gt;</b>  Range: (0-10)  The available rules are 10 and their identifier ranges from 1 to 10. The special case of <b>&lt;rule_id&gt;=0</b> is explained below in a note.</p> <p><b>&lt;service_type&gt;</b>  Type of service to count:  0 – No service (default)  1 – SMS Sent  2 – SMS Received  3 – Total SMS  4 – CS MO Calls  5 – CS MT Calls  6 – Total CS Calls  7 – IP All Data Sent  8 – IP All Data Received</p>	

	<p>9 – IP All Data      10 – IP All Data Sent (with Header)      11 – IP All Data Received (with Header)      12 – IP All Data (with Header)</p> <p><b>&lt;rule_enable&gt;</b>      Enable the counter on the rule      0 – rule disabled (default)      1 – rule enabled</p> <p><b>&lt;period&gt;</b>      Time period over which the service type data are counted:      0 – life (entire module life) (default)      1 – 8760 (hours)</p> <p><b>&lt;limit_amount&gt;</b>      Limit amount of data to count. 0 is default value and means no set limit: in this case only the counter is active.      0 – 4294967295 KBytes, for &lt;service_type&gt;=7,8,9,10,11 and 12      0 – 65535 number of SMS, for &lt;service_type&gt;=1,2, and 3      0 – 65535 minutes, for &lt;service_type&gt;=4,5 and 6</p> <p><b>&lt;action_id&gt;</b>      Identifier of the action to trigger when the threshold limit has been reached. It corresponds to the AT command associated to the event CONSUMEX, where X=1,...5. (Refer to #EVMONI command)      Range: (0-5); 0 means no action associated: in this case only the counter is active.</p> <p>Note: the Set command #CONSUMECFG=0 has a special behaviour: for all the enabled rules, the data and time of related counters are reset (<u>if they are not-life counters</u>)</p> <p>Note: the values set by command are directly stored in NVM and don't depend on the specific CMUX instance</p> <p>Note: the life counters are disabled if &lt;enable&gt; parameter of AT#ENACONSUME is equal to 0</p> <p>Note: a rule can be changed only setting &lt;rule_enable&gt;=0. The data and time of related counter are also reset (<u>if it's not a life counter</u>).</p> <p>Note: when the period expires and the limit amount of data has not been reached, then the counted data are reset, so the counting in the next period starts from 0.</p> <p>Note: if a service is blocked, then the related (life or not) counter is</p>
--	---

	stopped also in terms of time (as well as in terms of data obviously).
AT#CONSUMECFG?	Read command returns the current settings for each rule in the format:  <b>#CONSUMECFG:</b> <b>&lt;rule_id&gt;,&lt;service_type&gt;,&lt;rule_enable&gt;,&lt;period&gt;,&lt;limit_amount&gt;,&lt;action_id&gt;</b>
AT#CONSUMECFG=?	Test command reports the supported range of values for all parameters

### 3.5.7.4.2. Enable consume functionality - #ENACONSUME

#ENACONSUME – enable consume functionality	SELINT 2
AT#ENACONSUME=<enable>[,<storing_mode>[,<storing_period>]]	<p>Set command enables/disables the consume functionality.</p> <p>Parameters:</p> <p><b>&lt;enable&gt;</b>      0 – disable consume functionality (default)      1 – disable consume functionality except life counters      2 – enable consume functionality</p> <p><b>&lt;storing_mode&gt;</b>:      0 – the counters are saved in NVM at every shutdown (default)      1 – the counters are saved in NVM at every shutdown and periodically at regular intervals specified by <b>&lt;storing_period&gt;</b> parameter</p> <p><b>&lt;storing_period&gt;</b> - number of hours after that the counters are saved; numeric value in hours; range (0,8-24); 0 is default value and means no set period (as <b>&lt;storing_mode&gt;</b>=0)</p> <p>Note: the values set by command are directly stored in NVM and don't depend on the specific CMUX instance</p> <p>Note: when the functionality is disabled with <b>&lt;enable&gt;</b>=0, the data counters are stopped but not reset: to reset them (<u>except life counters</u>) set <b>&lt;rule_enable&gt;</b>=0 with AT#CONSUMECFG command.</p> <p>Note: when the functionality is disabled with <b>&lt;enable&gt;</b>=1, the data counters are stopped <u>except life counters</u>.</p> <p>Note: the life counters are never reset, neither in terms of counted data nor in terms of time</p>
AT#ENACONSUME?	Read command returns the current settings for all parameters in the format:  <b>#ENACONSUME: &lt;enable&gt;,&lt;storing_mode&gt;,&lt;storing_period&gt;</b>

AT#ENACONSUME=?	Test command reports the supported range of values for all parameters
-----------------	---

### 3.5.7.4.3. Report consume statistics - #STATSCONSUME

#STATSCONSUME – report consume statistics	SELINT 2
<p><b>AT#STATSCONSUME[=&lt;counter_type&gt;]</b></p> <p>Execution command reports the values of the life counters for every type of service or the values of period counters for every rule.</p> <p>Parameter:  <b>&lt;counter_type&gt;</b>  Type of counter: range (0-1)</p> <p>0 – period counter: the command returns the values of period counters for every rule defined with <b>AT#CONSUMECFG</b> command in the format:</p> <p><b>#STATSCONSUME:</b>  <b>&lt;rule_1&gt;,&lt;service_type&gt;,&lt;counted_data&gt;,&lt;threshold&gt;,&lt;current_time&gt;,&lt;period&gt;&lt;CR&gt;&lt;LF&gt;#STATSCONSUME:</b>  <b>&lt;rule_2&gt;,&lt;service_type&gt;,&lt;counted_data&gt;,&lt;threshold&gt;,&lt;current_time&gt;,&lt;period&gt;&lt;CR&gt;&lt;LF&gt;....&lt;CR&gt;&lt;LF&gt;&gt;#STATSCONSUME:</b>  <b>&lt;rule_10&gt;,&lt;service_type&gt;,&lt;counted_data&gt;,&lt;threshold&gt;,&lt;current_time&gt;,&lt;period&gt;</b></p> <p>where  <b>&lt;rule_i&gt;</b>  Index of the rule defined with <b>AT#CONSUMECFG</b></p> <p><b>&lt;service_type&gt;</b>  Type of service:  1 – SMS Sent  2 – SMS Received  3 – Total SMS  4 – CS MO Calls  5 – CS MT Calls  6 – Total CS Calls  7 – IP All Data Sent  8 – IP All Data Received  9 – IP All Data  10 – IP All Data Sent (with Header)  11 – IP All Data Received (with Header)  12 – IP All Data (with Header)</p> <p><b>&lt;counted_data&gt;</b>  Number of data counted during <b>&lt;current_time&gt;</b></p> <p><b>&lt;threshold&gt;</b></p>	

	<p>Limit amount of data to count (set in parameter &lt;limit_amount&gt; with AT#CONSUMECFG)</p> <p>&lt;current_time&gt; Number of passed hours in the current &lt;period&gt;</p> <p>&lt;period&gt; Number of total hours in the period where the data are counted (corresponds to the value set in &lt;period&gt; with AT#CONSUMECFG)</p> <p>1 – life counter: the command returns the values of life counters for every service type in the format:</p> <pre>#STATSCONSUME: &lt;service_1&gt;,&lt;life_data&gt;,&lt;current_time&gt;&lt;CR&gt;&lt;LF&gt;#STATSCONSUME: &lt;service_2&gt;,&lt;life_data&gt;,&lt;current_time&gt;&lt;CR&gt;&lt;LF&gt;...&lt;CR&gt;&lt;LF&gt;#STATSCONSUME:&lt;service_12&gt;,&lt;life_data&gt;,&lt;current_time&gt;</pre> <p>where &lt;service_i&gt; is defined as &lt;service_type&gt; above</p> <p>&lt;life_data&gt; Number of data counted during entire life time period</p> <p>&lt;current_time&gt; Number of passed hours during entire life time period</p> <p>Note: issuing AT#STATSCONSUME without parameters has the same effect as AT#STATSCONSUME=0</p>
AT#STATSCONSUME=?	Test command returns <b>OK</b> result code

### 3.5.7.4.4. Block/unblock a type of service - #BLOCKSCONSUME

#BLOCKCONSUME – block/unblock a type of service	SELINT 2
AT#BLOCKCONSUME=<service_type>,<block>	<p>Execution command blocks/unblocks a type of service</p> <p>Parameter: &lt;service_type&gt;</p> <p>Type of service:</p> <ul style="list-style-type: none"> <li>1 – SMS Sending</li> <li>2 – SMS Receiving</li> <li>3 – SMS Sending/ Receiving</li> <li>4 – CS MO Calls</li> <li>5 – CS MT Calls</li> <li>6 – MO/MT CS Calls</li> </ul>

	<p>7 – IP Data</p> <p><b>&lt;block&gt;</b>          0 – unblock the service specified in <b>&lt;service_type&gt;</b>          1 – block the service specified in <b>&lt;service_type&gt;</b></p> <p>Note: even if the service “SMS Received” has been blocked, an SMS ATRUN digest SMS can be received and managed.</p> <p>Note: the type of service 7 “IP Data” comprises all the IP services (i.e. IP ,with or without header, sent, receive and sent/receive data)</p>
<b>AT#BLOCKCONSUME?</b>	Read command reports the status blocked/unblocked of every type of service in the following format:  <b>#BLOCKCONSUME: &lt;service_type&gt;,&lt;block&gt;</b>
<b>AT#BLOCKCONSUME=?</b>	Test command reports the supported range of values for <b>&lt;service_type&gt;</b> and <b>&lt;block&gt;</b> parameters

### 3.5.7.5. FOTA Commands

#### 3.5.7.5.1. OTA Set Network Access Point - #OTASNAP

#OTASNAP – OTA Set Network Access Point		SELINT 0/1
AT#OTASNAP= <addr>[,<company_na me>]	<p>Set command specifies the SMS number that the module has to use to send the Remote Registration SM. If the current IMSI hasn't been yet registered, the Remote Registration SM is automatically sent.</p> <p>Parameters:</p> <p>&lt;addr&gt; - string parameter which specifies the phone number          &lt;company_name&gt; - string parameter containing a client identifier</p> <p>Note1: a special form of the Set command, #OTASNAP="”, causes the deletion of the SMS number</p> <p>Note2: the value of &lt;addr&gt; parameter can be overwritten from the OTA server by the Provisioning SMS</p> <p>Note3: a change of the value of &lt;company_name&gt; parameter causes a new FOTA Registration procedure</p> <p>Note4: if the &lt;company_name&gt; is an empty string, an ERROR is returned</p> <p>Note5: the setting is saved in NVM</p>	
AT#OTASNAP?	Read command reports the current settings in the format:	

#OTASNAP – OTA Set Network Access Point		SELINT 0/1
	#OTASNAP: <addr>[,<company_name>]	
AT#OTASNAP	Execution command has the same effect as the Read command	
AT#OTASNAP =?	<p>Test command returns the maximum length of &lt;addr&gt; field and maximum length of &lt;company_name&gt; field. The format is:</p> <p>#OTASNAP: &lt;nlength&gt;,&lt;tlength&gt;</p> <p>where:</p> <p>&lt;nlength&gt; - integer type value indicating the maximum length of field &lt;addr&gt;</p> <p>&lt;tlength&gt; - integer type value indicating the maximum length of field &lt;company_name&gt;</p>	

#OTASNAP – OTA Set Network Access Point		SELINT 2
AT#OTASNAP= <addr>[,<company_name>]	<p>Set command specifies the SMS number that the module has to use to send the Remote Registration SM. If the current IMSI hasn't been yet registered, the Remote Registration SM is automatically sent.</p> <p>Parameters:</p> <p>&lt;addr&gt; - string parameter which specifies the phone number</p> <p>&lt;company_name&gt; - string parameter containing a client identifier</p> <p>Note1: a special form of the Set command, #OTASNAP="\"", causes the deletion of the SMS number</p> <p>Note2: the value of &lt;addr&gt; parameter can be overwritten from the OTA server by the Provisioning SMS</p> <p>Note3: a change of the value of &lt;company_name&gt; parameter causes a new FOTA Registration procedure</p> <p>Note4: if the &lt;company_name&gt; is an empty string, an ERROR is returned</p> <p>Note5: the setting is saved in NVM</p>	
AT#OTASNAP?	Read command reports the current settings in the format:	
	#OTASNAP: <addr>[,<company_name>]	
AT#OTASNAP =?	Test command returns the maximum length of <addr> field and maximum	

#OTASNAP – OTA Set Network Access Point		SELINT 2
	<p>length of &lt;company_name&gt; field. The format is:</p> <p><b>#OTASNAP: &lt;nlength&gt;,&lt;tlength&gt;</b></p> <p>where:</p> <p>&lt;nlength&gt; - integer type value indicating the maximum length of field &lt;addr&gt;</p> <p>&lt;tlength&gt; - integer type value indicating the maximum length of field &lt;company_name&gt;</p>	
Example	<pre>AT#OTASNAP="SMS Number","Client Alpha" OK AT#OTASNAP? #OTASNAP:"SMS Number","Client Alpha" OK AT#OTASNAP=? #OTASNAP: 21,15 OK</pre>	

### 3.5.7.5.2. OTA Set User Answer - #OTASUAN

#OTASUAN – OTA Set User Answer		SELINT 0/1
AT#OTASUAN=<response>[,<mode>[<bfr>]]	<p>Set command:</p> <ul style="list-style-type: none"> <li>a) enables or disables sending of unsolicited result code #OTAEV that asks the TE to accept or reject the Management Server request to download a firmware</li> <li>b) allows the TE to accept or reject the request</li> </ul> <p>Parameters:</p> <p>&lt;response&gt; - numeric parameter used to accept or reject the download request</p> <ul style="list-style-type: none"> <li>0 – the request is rejected</li> <li>1 – the request is accepted</li> <li>2 – the request is delayed indefinitely: the URC is prompted indefinitely until the request is accepted or reject</li> </ul> <p>&lt;mode&gt; - numeric parameter that controls the processing of unsolicited result code #OTAEV</p> <ul style="list-style-type: none"> <li>0 –buffer unsolicited result codes in the MT; if MT result code buffers is full, the oldest ones can be discarded. No codes are forwarded to the TE.</li> <li>1 –discard unsolicited result codes when MT-TE link is reserved (e.g. in on-line data mode); otherwise forward them directly to the TE</li> <li>2 –buffer unsolicited result codes in the MT when MT-TE link is reserved (e.g. in on-line data mode) and flush them to the TE when MT-TE link becomes available; otherwise forward them directly to the TE</li> </ul> <p>&lt;bfr&gt; - numeric parameter that controls the effect on buffered codes when &lt;mode&gt;</p>	

#OTASUAN – OTA Set User Answer	SELINT 0/1
	<p>1 or 2 is entered</p> <p>0 – MT buffer of unsolicited result codes #OTAEV is cleared when &lt;mode&gt; 1 or 2 is entered</p> <p>1 – MT buffer of unsolicited result codes #OTAEV is flushed to TE when &lt;mode&gt; 1 or 2 is entered</p> <p>Note: the following unsolicited result codes and the corresponding events are defined:</p> <p><b>#OTAEV: Do you want to upgrade the firmware?</b> A management server request to start the firmware upgrade. The user answer is expected</p> <p><b>#OTAEV: User Answer Timeout</b> Expected User Answer not received within server defined time interval</p> <p><b>#OTAEV: Automatic Fw Upgrade Requested</b> An automatic Fw Upgrade procedure has started</p> <p><b>#OTAEV: Start Fw Download</b> The firmware download is started</p> <p><b>#OTAEV: Fw Download Complete</b> The firmware download is finished</p> <p><b>#OTAEV: OTA Fw Upgrade Failed</b> The Fw upgrade has failed</p> <p><b>#OTAEV: Module Upgraded To New Fw</b> The Fw upgrade is successfully finished</p> <p><b>#OTAEV: Server notified about successfull FW Upgrade</b> The final SMS has been sent to the server notifying the successful FW upgrade</p> <p><b>"#OTAEV: Registered"</b> The module has registered itself to a server</p> <p><b>"#OTAEV: Not registered"</b> The registration procedure has failed</p> <p><b>"#OTAEV: Company Name Registered"</b> The company name is registered</p> <p><b>"#OTAEV: Company Name not registered"</b> The company name is not registered</p>

#OTASUAN – OTA Set User Answer		SELINT 0/1
	<p>"#OTAEV: Provisioned"  A server has provisioned the module</p> <p>"#OTAEV: Notified"  A server has notified the module</p>	
AT# OTASUAN?	Read command reports the current settings in the format:	
	#OTASUAN: ,<mode>,<bfr>	
AT#OTASUAN	Execution command has the same effect as the Read command	
AT#OTASUAN =?	Test command returns values supported as a compound value	
Example	AT#OTASUAN=,2,1 OK AT#OTASUAN? #OTASUAN: ,2,1 OK AT#OTASUAN =? #OTASUAN: (0-2),(0-2),(0,1) OK	

#OTASUAN – OTA Set User Answer		SELINT 2
AT#OTASUAN= <response>[,<mode>][,<bfr>]]	<p>Set command:</p> <ul style="list-style-type: none"> <li>a) enables or disables sending of unsolicited result code #OTAEV that asks the TE to accept or reject the Management Server request to download a firmware</li> <li>b) allows the TE to accept or reject the request</li> </ul> <p>Parameters:</p> <p>&lt;response&gt; - numeric parameter used to accept or reject the download request</p> <ul style="list-style-type: none"> <li>0 – the request is rejected</li> <li>1 – the request is accepted</li> <li>2 – the request is delayed indefinitely: the URC is prompted indefinitely until the request is accepted or reject</li> </ul> <p>&lt;mode&gt; - numeric parameter that controls the processing of unsolicited result code #OTAEV</p> <ul style="list-style-type: none"> <li>0 –buffer unsolicited result codes in the MT; if MT result code buffers is full, the oldest ones can be discarded. No codes are forwarded to the TE.</li> <li>1 –discard unsolicited result codes when MT-TE link is reserved (e.g. in on-line data mode); otherwise forward them directly to the TE</li> <li>2 –buffer unsolicited result codes in the MT when MT-TE link is reserved (e.g. in on-line data mode) and flush them to the TE when MT-TE link becomes available; otherwise forward them directly to the TE</li> </ul> <p>&lt;bfr&gt; - numeric parameter that controls the effect on buffered codes when &lt;mode&gt; 1 or 2 is entered</p>	

#OTASUAN – OTA Set User Answer	SELINT 2
<p>0 – MT buffer of unsolicited result codes #OTAEV is cleared when &lt;mode&gt; 1 or 2 is entered</p> <p>1 – MT buffer of unsolicited result codes #OTAEV is flushed to TE when &lt;mode&gt; 1 or 2 is entered</p> <p>Note: the following unsolicited result codes and the corresponding events are defined:</p> <p>#OTAEV: Do you want to upgrade the firmware? A management server request to start the firmware upgrade. #OTASUAN – OTA Set User Answer		SELINT 2
	A server has provisioned the module  "#OTAEV: Notified" A server has notified the module	
AT# OTASUAN?	Read command reports the current settings in the format:  <b>#OTASUAN: ,&lt;mode&gt;,&lt;bfr&gt;</b>	
AT#OTASUAN =?	Test command returns values supported as a compound value	
Example	AT#OTASUAN=,2,1 OK AT#OTASUAN? #OTASUAN: ,2,1 OK AT#OTASUAN =? #OTASUAN: (0-2),(0-2),(0,1) OK	

### 3.5.7.5.3. OTA Set Ring Indicator - #OTASETRI

#OTASETRI - OTA Set Ring Indicator		SELINT 0/1
AT#OTASETRI=[<n>]	<p>Set command enables/disables the Ring Indicator pin response to a manual OTA server request to start the firmware upgrade. If enabled, a negative going pulse is generated when the URC “#OTAEV: <i>Do you want to upgrade the firmware?</i>” is prompted (see AT#OTASUAN command). The duration of this pulse is determined by the value of &lt;n&gt;.</p> <p>Parameter:</p> <p>&lt;n&gt; - RI enabling</p> <ul style="list-style-type: none"> <li>0 - disables RI pin response when the URC “#OTAEV: <i>Do you want to upgrade the firmware?</i>” is prompted (factory default)</li> <li>50..1150 - enables RI pin response. The value of &lt;n&gt; is the duration in ms of the pulse generated when the URC “#OTAEV: <i>Do you want to upgrade the firmware?</i>” is prompted.</li> </ul> <p>Note: if the &lt;response&gt; parameter of the AT#OTASUAN command has the value 2, then the URC is prompted indefinitely until the Fw update request is accepted or reject and, for every URC, a pulse is generated.</p> <p>Note: the setting is saved in the profile parameters</p>	
AT#OTASETRI?	Read command reports the duration in ms of the pulse generated when the URC “#OTAEV: <i>Do you want to upgrade the firmware?</i> ” is prompted, in the format:  <b>#OTASETRI: &lt;n&gt;</b>	

#OTASETRI - OTA Set Ring Indicator		SELINT 0/1
		Note: as seen before, the value <n>=0 means that the <b>RI</b> pin response to the URC is disabled.
AT#OTASETRI	Execution command has the same effect as the Read command	
AT#OTASETRI=?	Reports the range of supported values for parameter <n>	

#OTASETRI - OTA Set Ring Indicator		SELINT 2
AT#OTASETRI=[<n>]	Set command enables/disables the Ring Indicator pin response to a manual OTA server request to start the firmware upgrade. If enabled, a negative going pulse is generated when the URC “#OTAEV: Do you want to upgrade the firmware?” is prompted (see <b>AT#OTASUAN</b> command). The duration of this pulse is determined by the value of <n>.  Parameter: <n> - <b>RI</b> enabling 0 - disables <b>RI</b> pin response when the URC “#OTAEV: Do you want to upgrade the firmware?” is prompted (factory default) 50..1150 - enables <b>RI</b> pin response. The value of <n> is the duration in ms of the pulse generated when the URC “#OTAEV: Do you want to upgrade the firmware?” is prompted.  Note: if the <response> parameter of the AT#OTASUAN command has the value 2, then the URC is prompted indefinitely until the Fw update request is accepted or reject and, for every URC, a pulse is generated.  Note: the setting is saved in the profile parameters	
AT#OTASETRI?	Read command reports the duration in ms of the pulse generated when the URC “#OTAEV: Do you want to upgrade the firmware?” is prompted, in the format:  <b>#OTASETRI: &lt;n&gt;</b>  Note: as seen before, the value <n>=0 means that the <b>RI</b> pin response to the URC is disabled.	
AT#OTASETRI=?	Reports the range of supported values for parameter <n>	

### 3.5.7.5.4. Saves IP port and IP address for OTA over IP - #OTAIPCFG

#OTAIPCFG – Saves IP port and IP address for OTA over IP		SELINT 0/1
AT#OTAIPCFG=<IPort>,<IPaddr>[,<unused>]	This command saves in NVM the IP port number and IP address of the OTA server.  Parameters: <b>&lt;IPPort&gt;</b> : IP port of the OTA server <b>&lt;IPAddr&gt;</b> : IP address of the OTA server, string type. This parameter can be any valid IP address in the format: “xxx.xxx.xxx.xxx”	

	<p>Note: the values set by the command are directly stored in NVM and don't depend on the specific CMUX instance.</p> <p>Note2: a special form of the Set command, #OTAIPCFG=&lt;IPort&gt;," sets the IP address to "0.0.0.0".</p>
<b>AT#OTAIPCFG?</b>	Read command reports the currently selected <IPort> and <IPaddr> in the format:  <b>#OTAIPCFG: &lt;IPort&gt;,&lt;IPaddr&gt;,0</b>
<b>AT#OTAIPCFG</b>	Execution command has the same effect as the Read command
<b>AT#OTAIPCFG =?</b>	Test command reports the range of supported values for parameters <IPort> and <unused>

<b>#OTAIPCFG – Saves IP port and IP address for OTA over IP</b> <span style="float: right;">SELINT 2</span>	
<b>AT#OTAIPCFG=&lt;IPort&gt;,&lt;IPaddr&gt;[,&lt;unused&gt;]</b>	<p>This command saves in NVM the IP port number and IP address of the OTA server.</p> <p>Parameters:</p> <p>&lt;IPort&gt;: IP port of the OTA server          &lt;IPaddr&gt;: IP address of the OTA server, string type. This parameter can be any valid IP address in the format: "xxx.xxx.xxx.xxx"</p> <p>Note: the values set by the command are directly stored in NVM and don't depend on the specific CMUX instance.</p> <p>Note2: a special form of the Set command, #OTAIPCFG=&lt;IPort&gt;," sets the IP address to "0.0.0.0".</p>
<b>AT#OTAIPCFG?</b>	Read command reports the currently selected <IPort> and <IPaddr> in the format:  <b>#OTAIPCFG: &lt;IPort&gt;,&lt;IPaddr&gt;,0</b>
<b>AT#OTAIPCFG=?</b>	Test command reports the range of supported values for parameters <IPort> and <unused>

### 3.5.7.5.5. Starts an OTA Update over IP - #OTAIPUPD

<b>#OTAIPUPD – Starts an OTA Update over IP</b> <span style="float: right;">SELINT 0/1/2</span>	
<b>AT#OTAIPUPD</b>	This command starts an OTA Update over IP. Note: in order to complete the update, the device has to be registered in the OTA server.

	<p>Note: it is necessary to set some parameters beforehand: the bearer (CSD or GPRS) and the APN, through the command AT#OTASNAPIPCFG, the IP port and IP address, through the command AT#OTAIPCFG.</p> <p>After the command AT#OTAIPUPD has been set, some unsolicited messages will inform the user about the status of the update process:</p> <ul style="list-style-type: none"> <li>- <b>#OTAEV: Start Fw Download</b></li> <li>- <b>#OTAEV: Fw Download Complete</b></li> <li>- <b>#OTAEV: Module Upgraded To New FW</b></li> <li>- <b>#OTAEV: Server notified about successfull FW Upgrade</b></li> </ul> <p><b>Or, in case of failure:</b></p> <ul style="list-style-type: none"> <li>- <b>#OTAEV: OTA FW Upgrade Failed</b></li> </ul>
<b>AT#OTAIPUPD?</b>	Read command reports the current status of the OTA over IP: the value 1 is returned if the OTA over IP is running (in this case the user shall receive the unsolicited messages), 0 otherwise.
<b>AT#OTAIPUPD =?</b>	Test command tests for command existence

### 3.5.7.5.6. OTA Set IP port and address for OTA over IP - #OTASNAPIP

#OTASNAPIP – OTA Set IP port and address for OTA over IP	SELINT 0/1
<b>AT#OTASNAPIP= &lt;IPort&gt;,&lt;IPaddr&gt;[,&lt;mynumber&gt;[,&lt;company_name&gt;[,&lt;unused&gt;]]]</b> <p>Parameters:</p> <p>&lt;IPort&gt; - IP port of the OTA server  &lt;IPaddr&gt; - IP address of the OTA server, string type.  This parameter can be any valid IP address in the format: “xxx.xxx.xxx.xxx”  &lt;mynumber&gt; - string parameter which specifies the phone number of the client  &lt;company_name&gt; - string parameter containing a client identifier</p> <p>Note1: the command returns ERROR if the APN has not been set through the command AT#OTASNAPIPCFG</p> <p>Note2: a special form of the Set command, #OTASNAP=&lt;IPort&gt;,””, sets the IP</p>	Set command specifies the IP port number and IP address that the module has to use to send the Remote Registration message. If the current IMSI hasn't been yet registered, the Remote Registration message is automatically sent.

<b>#OTASNAPIP – OTA Set IP port and address for OTA over IP</b>		<b>SELINT 0/1</b>
	<p>address to “0.0.0.0”.</p> <p>Note3: the values of &lt;IPort&gt; and &lt;IPaddr&gt; parameters can be overwritten from the OTA server by any SMS ( Command, RSA Discovery Registration ... )</p> <p>Note4: a change of the value of &lt;company_name&gt; parameter causes a new FOTA Registration procedure</p> <p>Note5: if the &lt;company_name&gt; is an empty string, an ERROR is returned</p> <p>Note6: all the settings are saved in NVM but &lt; mynumber&gt;</p>	
<b>AT#OTASNAPIP?</b>	Read command reports the current settings in the format:  <b>#OTASNAPIP: &lt;IPort&gt;,&lt;IPaddr&gt;[,&lt;company_name&gt;],0</b>	
<b>AT#OTASNAPIP</b>	Execution command has the same effect as the Read command	
<b>AT#OTASNAPIP =?</b>	Test command returns the range for <IPort> values and the maximum length of <mynumber> field and of <company_name> field. The format is:  <b>#OTASNAPIP: (0-65535),&lt;nlength&gt;,&lt;tlength&gt;</b>  where: <nlength> - integer type value indicating the maximum length of field <mynumber> <tlength> - integer type value indicating the maximum length of field <company_name>	

<b>#OTASNAPIP – OTA Set IP port and address for OTA over IP</b>		<b>SELINT 2</b>
<b>AT#OTASNAPIP= &lt;IPort&gt;,&lt;IPaddr&gt;[,&lt;mynumber&gt;[,&lt;company_name&gt;[,&lt;unused&gt;]]]</b>	<p>Set command specifies the IP port number and IP address that the module has to use to send the Remote Registration message. If the current IMSI hasn't been yet registered, the Remote Registration message is automatically sent.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;IPort&gt; - IP port of the OTA server</li> <li>&lt;IPaddr&gt; - IP address of the OTA server, string type. This parameter can be any valid IP address in the format: “xxx.xxx.xxx.xxx”</li> <li>&lt;mynumber&gt; - string parameter which specifies the phone number of the client</li> <li>&lt;company_name&gt; - string parameter containing a client identifier</li> </ul> <p>Note1: the command returns ERROR if the APN has not been set through the command AT#OTASNAPIPCFG</p> <p>Note2: a special form of the Set command, #OTASNAP=&lt;IPort&gt;,"", sets the IP address to “0.0.0.0”.</p> <p>Note3: the values of &lt;IPort&gt; and &lt;IPaddr&gt; parameters can be overwritten from</p>	

#OTASNAPIP – OTA Set IP port and address for OTA over IP	SELINT 2
	<p>the OTA server by any SMS ( Command, RSA Discovery Registration ... )</p> <p>Note4: a change of the value of &lt;company_name&gt; parameter causes a new FOTA Registration procedure</p> <p>Note5: if the &lt;company_name&gt; is an empty string, an ERROR is returned</p> <p>Note6: all the settings are saved in NVM but &lt; mynumber&gt;</p>
AT#OTASNAPIP?	Read command reports the current settings in the format:  #OTASNAPIP: <iPort>,<iAddr>[,<company_name>],0
AT#OTASNAPIP=?	Test command returns the range for <iPort> values and the maximum length of <mynumber> field and of <company_name> field. The format is:  #OTASNAPIP: (40-65535),<nlength>,<tlength>  where: <nlength> - integer type value indicating the maximum length of field <mynumber> <tlength> - integer type value indicating the maximum length of field <company_name>

### 3.5.7.5.7. OTA Set Access Point Name for OTA over IP - #OTASNAPIPCFG

#OTASNAPIPCFG – OTA Set Access Point Name for OTA over IP	SELINT 0/1
AT#OTASNAPIPCF G= <bearer>,<APN>[,<username>,<password>[,<rspTimeout>]]	<p>Set command specifies the bearer (GSM or GPRS) and the APN that the module has to use to send the Remote Registration message.</p> <p>The APN is the Access Point Name in case of GPRS bearer or the internet service provider number in case of GSM bearer.</p> <p>Parameters:</p> <p>&lt;bearer&gt;</p> <p>0 – Undefined ( default value )</p> <p>1 – GSM</p> <p>2 - GPRS</p> <p>&lt;APN&gt; - string parameter; in case of GPRS bearer: Access Point Name, a logical name that is used to select the GGSN or the external packet data network; in case of GSM bearer: phone number of the internet service provider</p> <p>&lt;username&gt; - string parameter, used only if the context requires it</p> <p>&lt;password&gt; - string parameter, used only if the context requires it</p>

#OTASNAPIPCFG – OTA Set Access Point Name for OTA over IP	SELINT 0/1
	<p>&lt;rspTimeout&gt; - used when waiting for a response from OTA server, after the module has sent a message: if there's no response within this timeout period the TCP connection is closed.</p> <p>0 - no timeout</p> <p>1..65535 - timeout value in seconds (default 300 s.)</p> <p>Note1: if the &lt;bearer&gt; is set to 0, then the APN is erased. If the bearer is already 0, any &lt;APN&gt; or &lt;username&gt; or &lt;password&gt; will not be set</p> <p>Note2: the values of &lt;bearer&gt;, &lt;APN&gt;, &lt;username&gt; and &lt;password&gt; parameters can be overwritten from the OTA server by any SMS ( Command, RSA Discovery Registration ... )</p> <p>Note3: all the settings are saved in NVM</p>
AT#OTASNAPIPCFG?	Read command reports the current settings in the format:  <b>#OTASNAPIPCFG:</b> <b>&lt;bearer&gt;,&lt;APN&gt;[,&lt;username&gt;[,&lt;password&gt;[,&lt;rspTimeout&gt;]]]</b>
AT#OTASNAPIPCFG	Execution command has the same effect as the Read command
AT#OTASNAPIPCFG=?	Test command returns the range for <bearer> values, the maximum length of <APN>, <username> and <password> string parameters and the range for <rspTimeout> values. The format is:  <b>#OTASNAPIPCFG: (0-2),99,49,49,(0-65535)</b>

#OTASNAPIPCFG – OTA Set Access Point Name for OTA over IP	SELINT 2
AT#OTASNAPIPCFG=G=<bearer>,<APN>[,<username>,<password>[,<rspTimeout>]]	<p>Set command specifies the bearer (GSM or GPRS) and the APN that the module has to use to send the Remote Registration message.</p> <p>The APN is the Access Point Name in case of GPRS bearer or the internet service provider number in case of GSM bearer.</p> <p>Parameters:</p> <p>&lt;bearer&gt;</p> <p>0 – Undefined ( default value )</p> <p>1 – GSM</p> <p>2 - GPRS</p> <p>&lt;APN&gt; - string parameter; in case of GPRS bearer: Access Point Name, a logical name that is used to select the GGSN or the external packet data network; in case of GSM bearer: phone number of the internet service provider</p> <p>&lt;username&gt; - string parameter, used only if the context requires it</p>

#OTASNAPIPCFG – OTA Set Access Point Name for OTA over IP	SELINT 2
	<p>&lt;password&gt; - string parameter, used only if the context requires it</p> <p>&lt;rspTimeout&gt; - used when waiting for a response from OTA server, after the module has sent a message: if there's no response within this timeout period the TCP connection is closed.</p> <p>0 - no timeout</p> <p>1..65535 - timeout value in seconds (default 300 s.)</p> <p>Note1: if the &lt;bearer&gt; is set to 0, then the APN is erased. If the bearer is already 0, any &lt;APN&gt; or &lt;username&gt; or &lt;password&gt; will not be set</p> <p>Note2: the values of &lt;bearer&gt;, &lt;APN&gt;, &lt;username&gt; and &lt;password&gt; parameters can be overwritten from the OTA server by any SMS ( Command, RSA Discovery Registration ... )</p> <p>Note3: all the settings are saved in NVM</p>
AT#OTASNAPIPCFG?	Read command reports the current settings in the format: <b>#OTASNAPIPCFG:</b> <b>&lt;bearer&gt;,&lt;APN&gt;[,&lt;username&gt;[,&lt;password&gt;[,&lt;rspTimeout&gt;]]]</b>
AT#OTASNAPIPCFG=?	Test command returns the range for <bearer> values, the maximum length of <APN>, <username> and <password> string parameters and the range for <rspTimeout> values. The format is: <b>#OTASNAPIPCFG: (0-2),99,49,49,(0-65535)</b>

### 3.5.7.6. Multisocket AT Commands

#### 3.5.7.6.1. Socket Status - #SS

#SS - Socket Status	SELINT 2
AT#SS[=<connId>]	<p>Execution command reports the current status of the socket:</p> <p><b>Parameters:</b>  <b>&lt;connId&gt;</b> - socket connection identifier  <b>1..6</b> </p> <p><b>The response format is:</b></p> <p><b>#SS: &lt;connId&gt;,&lt;state&gt;,&lt;locIP&gt;,&lt;locPort&gt;,&lt;remIP&gt;,&lt;remPort&gt;</b></p> <p>where:  <b>&lt;connId&gt;</b> - socket connection identifier, as before</p>

#SS - Socket Status	SELINT 2
	<p>&lt;state&gt; - actual state of the socket:</p> <ul style="list-style-type: none"> <li>0 - Socket Closed.</li> <li>1 - Socket with an active data transfer connection.</li> <li>2 - Socket suspended.</li> <li>3 - Socket suspended with pending data.</li> <li>4 - Socket listening.</li> <li>5 - Socket with an incoming connection. Waiting for the user accept or shutdown command.</li> </ul> <p>&lt;locIP&gt; - IP address associated by the context activation to the socket.</p> <p>&lt;locPort&gt; - two meanings:</p> <ul style="list-style-type: none"> <li>- the listening port if we put the socket in listen mode.</li> <li>- the local port for the connection if we use the socket to connect to a remote machine.</li> </ul> <p>&lt;remIP&gt; - when we are connected to a remote machine this is the remote IP address.</p> <p>&lt;remPort&gt; - it is the port we are connected to on the remote machine.</p> <p>Note: issuing #SS&lt;CR&gt; causes getting information about status of all the sockets; the response format is:</p> <pre>#SS: &lt;connId1&gt;,&lt;state1&gt;,&lt;locIP1&gt;,&lt;locPort1&gt;,&lt;remIP1&gt;,&lt;remPort1&gt; &lt;CR&gt;&lt;LF&gt; ... #SS: &lt;connId6&gt;,&lt;state6&gt;,&lt;locIP6&gt;,&lt;locPort6&gt;,&lt;remIP6&gt;,&lt;remPort6&gt;</pre>
AT#SS=?	Test command reports the range for parameter <connId>.

#SS - Socket Status	SELINT 2
<b>Example</b> <pre>AT#SS #SS: 1,3,91.80.90.162,61119,88.37.127.146,10510 #SS: 2,4,91.80.90.162,1000 #SS: 3,0 #SS: 4,0 #SS: 5,3,91.80.73.70,61120,88.37.127.146,10509 #SS: 6,0  OK  Socket 1: opened from local IP 91.80.90.162/local port 61119 to remote IP 88.37.127.146/remote port 10510 is suspended with pending data  Socket 2: listening on local IP 91.80.90.162/local port 1000  Socket 5: opened from local IP 91.80.73.70/local port 61120 to remote IP 88.37.127.146/remote port 10509 is suspended with pending data  AT#SS=2  #SS: 2,4,91.80.90.162,1000  OK  We have information only about socket number 2</pre>	

### 3.5.7.6.2. Socket Info - #SI

#SI - Socket Info	SELINT 2
<b>AT#SI[=&lt;connId&gt;]</b> <p>Execution command is used to get information about socket data traffic.</p> <p>Parameters:  <b>&lt;connId&gt;</b> - socket connection identifier          1..6</p> <p>The response format is:</p> <p><b>#SI: &lt;connId&gt;,&lt;sent&gt;,&lt;received&gt;,&lt;buff_in&gt;,&lt;ack_waiting&gt;</b></p> <p>where:</p> <p><b>&lt;connId&gt;</b> - socket connection identifier, as before  <b>&lt;sent&gt;</b> - total amount (in bytes) of sent data since the last time the socket connection identified by <b>&lt;connId&gt;</b> has been opened  <b>&lt;received&gt;</b> - total amount (in bytes) of received data since the last time the socket connection identified by <b>&lt;connId&gt;</b> has been opened  <b>&lt;buff_in&gt;</b> - total amount (in bytes) of data just arrived through the socket</p>	

#SI - Socket Info	SELINT 2
	<p>connection identified by &lt;connId&gt; and currently buffered, not yet read</p> <p>&lt;ack_waiting&gt; - total amount (in bytes) of sent and not yet acknowledged data since the last time the socket connection identified by &lt;connId&gt; has been opened</p> <p>Note: parameters associated with a socket identified by &lt;connId&gt; are cleared when the socket itself is connected again(#SD or #SA after #SL). Until then, if previous connection has been established and closed, old values are yet available.</p> <p>Note: not yet acknowledged data are available only for TCP connections; the value &lt;ack_waiting&gt; is always 0 for UDP connections.</p> <p>Note: issuing #SI&lt;CR&gt; causes getting information about data traffic of all the sockets; the response format is:</p> <pre>#SI: &lt;connId1&gt;,&lt;sent1&gt;,&lt;received1&gt;,&lt;buff_in1&gt;,&lt;ack_waiting1&gt; &lt;CR&gt;&lt;LF&gt; ... #SI: &lt;connId6&gt;,&lt;sent6&gt;,&lt;received6&gt;,&lt;buff_in6&gt;,&lt;ack_waiting6&gt;</pre>
AT#SI=?	Test command reports the range for parameter <connId>.
Example	<p>AT#SI</p> <pre>#SI: 1,123,400,10,50 #SI: 2,0,100,0,0 #SI: 3,589,100,10,100 #SI: 4,0,0,0,0 #SI: 5,0,0,0,0 #SI: 6,0,98,60,0</pre> <p>OK</p> <p><i>Sockets 1,2,3,6 are opened with some data traffic. For example socket 1 has 123 bytes sent, 400 bytes received, 10 byte waiting to be read and 50 bytes waiting to be acknowledged from the remote side.</i></p> <p>AT#SI=1</p> <pre>#SI: 1,123,400,10,50</pre> <p>OK</p> <p><i>We have information only about socket number 1</i></p>

### 3.5.7.6.3. Context Activation - #SGACT

#SGACT - Context Activation	SELINT 2
<p><b>AT#SGACT=&lt;cid&gt;,&lt;stat&gt;[,&lt;userId&gt;,&lt;pwd&gt;]</b></p> <p>Execution command is used to activate or deactivate either the GSM context or the specified PDP context.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;cid&gt; - PDP context identifier</li> <li>0 - specifies the GSM context</li> <li>1..5 - numeric parameter which specifies a particular PDP context definition</li> </ul> <p>&lt;stat&gt;</p> <ul style="list-style-type: none"> <li>0 - deactivate the context</li> <li>1 - activate the context</li> </ul> <p>&lt;userId&gt; - string type, used only if the context requires it</p> <p>&lt;pwd&gt; - string type, used only if the context requires it</p> <p>Note: context activation/deactivation returns <b>ERROR</b> if there is not any socket associated to it (see <b>AT#SCFG</b>).</p> <p>Note: after the GSM context has been activated, you can use either Multisocket, or FTP or Email AT commands to send/receive TCP/IP packets via GSM.</p> <p>Note: to deactivate the GSM context, <b>AT#SGACT=0,0</b> has to be issued on the same serial port used when the context was activated.</p> <p>Note: GSM context activation is affected by <b>AT+CBST</b> command. In particular, GSM context activation is just allowed with “non transparent” data calls.</p> <p>Note: activating a GSM context while a PDP context is already activated causes the PDP context to be suspended.</p> <p>Note: if GSM context is active, it is not allowed any PDP context activation.</p> <p>Note: if username and/or password parameters are empty No Authentication method is used by the module during the PDP CONTEXT ACTIVATION procedure (see also <b>AT#SGACTAUTH</b>).</p>	
<p><b>AT#SGACT?</b></p> <p>Returns the state of all the contexts that have been defined through the commands <b>+CGDCONT</b> or <b>#GSMCONT</b></p> <p><b>#SGACT: &lt;cid1&gt;,&lt;Stat1&gt;&lt;CR&gt;&lt;LF&gt;</b>  <b>...</b>  <b>#SGACT: &lt;cid5&gt;,&lt;Stat5&gt;</b></p> <p>where:</p> <p>&lt;cidn&gt; - as &lt;cid&gt; before</p> <p>&lt;statn&gt; - context status</p>	

#SGACT - Context Activation		SELINT 2
	0 - context deactivated 1 - context activated	
AT#SGACT=?	Test command reports the range for the parameters <cid> and <stat>	
Note	It is strongly recommended to use the same command (e.g. #SGACT) to activate the context, deactivate it and interrogate about its status.	

#### 3.5.7.6.4. Socket Shutdown - #SH

#SH - Socket Shutdown		SELINT 2
AT#SH=<connId>	This command is used to close a socket.  Parameter: <connId> - socket connection identifier 1..6	
AT#SH=?	Test command reports the range for parameter <connId>.	

#### 3.5.7.6.5. Socket Configuration - #SCFG

#SCFG - Socket Configuration		SELINT 2
AT#SCFG=<connId>,<cid>,<pktSz>,<maxTo>,<connTo>,<txTo>	<p>Set command sets the socket configuration parameters.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;connId&gt; - socket connection identifier 1..6</li> <li>&lt;cid&gt; - PDP context identifier 0 - specifies the GSM context 1..5 - numeric parameter which specifies a particular PDP context definition</li> <li>&lt;pktSz&gt; - packet size to be used by the TCP/UDP/IP stack for data sending. 0 - select automatically default value(300). 1..1500 - packet size in bytes.</li> <li>&lt;maxTo&gt; - exchange timeout (or socket inactivity timeout); if there's no data exchange within this timeout period the connection is closed. 0 - no timeout 1..65535 - timeout value in seconds (default 90 s.)</li> <li>&lt;connTo&gt; - connection timeout; if we can't establish a connection to the remote within this timeout period, an error is raised. 10..1200 - timeout value in hundreds of milliseconds (default 600)</li> <li>&lt;txTo&gt; - data sending timeout; after this period data are sent also if they're less than max packet size. 0 - no timeout 1..255 - timeout value in hundreds of milliseconds (default 50)</li> </ul> <p>Note: these values are automatically saved in NVM.</p>	

#SCFG - Socket Configuration		SELINT 2
		Note: if DNS resolution is required, max DNS resolution time(20 sec) has to be considered in addition to <connTo>
AT#SCFG?		Read command returns the current socket configuration parameters values for all the six sockets, in the format:  <b>#SCFG: &lt;connId1&gt;,&lt;cid1&gt;,&lt;pktsz1&gt;,&lt;maxTo1&gt;,&lt;connTo1&gt;,&lt;txTo1&gt;&lt;CR&gt;&lt;LF&gt;</b> ... <b>#SCFG: &lt;connId6&gt;,&lt;cid6&gt;,&lt;pktsz6&gt;,&lt;maxTo6&gt;,&lt;connTo6&gt;,&lt;txTo6&gt;&lt;CR&gt;&lt;LF&gt;</b>
AT#SCFG=?		Test command returns the range of supported values for all the subparameters.
Example		at#scfg? #SCFG: 1,1,300,90,600,50 #SCFG: 2,2,300,90,600,50 #SCFG: 3,2,250,90,600,50 #SCFG: 4,1,300,90,600,50 #SCFG: 5,1,300,90,600,50 #SCFG: 6,1,300,90,600,50  OK

### 3.5.7.6.6. Socket Configuration Extended - #SCFGEXT

#SCFGEXT - Socket Configuration Extended		SELINT 2
AT#SCFGEXT= <conned>,<srMode>, <recvDataMode>, <keepalive>, [,<ListenAutoRsp> [,<sendDataMode>] ]	<p>Set command sets the socket configuration extended parameters.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;connId&gt; - socket connection identifier 1..6</li> <li>&lt;srMode&gt; - SRing unsolicited mode 0 - Normal (default):     SRING : &lt;connId&gt; where &lt;connId&gt; is the socket connection identifier</li> <li>1 – Data amount:     SRING : &lt;connId&gt;,&lt;recData&gt; where &lt;recData&gt; is the amount of data received on the socket connection number &lt;connId&gt;</li> <li>2 - Data view:     SRING : &lt;connId&gt;,&lt;recData&gt;,&lt;data&gt; same as before and &lt;data&gt; is data received displayed following &lt;dataMode&gt; value</li> <li>3 – Data view with UDP datagram informations:     SRING : &lt;sourceIP&gt;,&lt;sourcePort&gt;&lt;connId&gt;,&lt;recData&gt;,</li> </ul>	

	<p>&lt;dataLeft&gt;,&lt;data&gt; same as before with &lt;sourceIP&gt;,&lt;sourcePort&gt; and &lt;dataLeft&gt; that means the number of bytes left in the UDP datagram</p> <p>Note: &lt;srMode&gt; value 3 is not available in SW 13.00.002</p> <p><b>&lt;recvDataMode&gt;</b> - data view mode for received data in command mode(AT#SRECV or &lt;srMode&gt; = 2)          0- text mode (default)          1- hexadecimal mode</p> <p><b>&lt;keepalive&gt;</b> - Set the TCP Keepalive value in minutes          0 – Deactivated (default)          1 – 240 – Keepalive time in minutes</p> <p><b>&lt;ListenAutoRsp&gt;</b> - Set the listen auto-response mode, that affects the commands AT#SL and AT#SLUDP          0 - Deactivated (default)          1 – Activated</p> <p><b>&lt;sendDataMode&gt;</b> - data mode for sending data in command mode(AT#SEND)          0 - data represented as text (default)          1 - data represented as sequence of hexadecimal numbers (from 00 to FF)          Each octet of the data is given as two IRA character long hexadecimal number</p> <p>Note: these values are automatically saved in NVM.          Note: Keepalive is available only on TCP connections.</p> <p>Note: for the behaviour of AT#SL and AT#SLUDP in case of auto-response mode or in case of no auto-response mode, see the description of the two commands.</p>
AT#SCFGEXT?	Read command returns the current socket extended configuration parameters values for all the six sockets, in the format:  <b>#SCFGEXT:&lt;connId1&gt;,&lt;srMode1&gt;,&lt;dataMode1&gt;,&lt;keepalive1&gt;,&lt;ListenAutoRsp1&gt;,0&lt;CR&gt;&lt;LF&gt;</b> ... <b>#SCFGEXT:&lt;connId6&gt;,&lt;srMode6&gt;,&lt;dataMode6&gt;,&lt;keepalive6&gt;,&lt;ListenAutoRsp6&gt;,0&lt;CR&gt;&lt;LF&gt;</b>
AT#SCFGEXT=?	Test command returns the range of supported values for all the subparameters.

<b>Example</b>	<p>Socket 1 set with data view sring, text data mode, a keepalive time of 30 minutes and listen auto-response set.</p> <p>Socket 3 set with data amount sring, hex recv data mode, no keepalive and listen auto-response not set.</p> <p>Socket 4 set with hex recv and send data mode</p> <pre>at#scfgext? #SCFGEXT: 1,2,0,30,1,0 #SCFGEXT: 2,0,0,0,0,0 #SCFGEXT: 3,1,1,0,0,0 #SCFGEXT: 4,0,1,0,0,1 #SCFGEXT: 5,0,0,0,0,0 #SCFGEXT: 6,0,0,0,0,0 OK</pre>
----------------	---

### 3.5.7.6.7. Socket configuration Extended 2 - #SCFGEXT2

#SCFGEXT2 - Socket Configuration Extended	SELINT 2
<b>AT#SCFGEXT2=</b> <b>&lt;connId&gt;,&lt;bufferStart&gt;,</b> <b>[,&lt;abortConnAttempt&gt;</b> <b>[,&lt;sringLen &gt;</b> <b>[,&lt;sringTo &gt;</b> <b>[,&lt;noCarrierMode&gt;]]]</b>	<p>Set command sets the socket configuration extended parameters for features not included in #SCFGEXT command.</p> <p>Parameters:</p> <p>&lt;connId&gt; - socket connection identifier 1..6</p> <p>&lt;bufferStart&gt; - Set the sending timeout method based on new data received from the serial port. (&lt;txTo&gt; timeout value is set by #SCFG command) Restart of transmission timer will be done when new data are received from the serial port.</p> <p>0 - old behaviour for transmission timer (#SCFG command 6th parameter old behaviour, start only first time if new data are received from the serial port) 1 - new behaviour for transmission timer: restart when new data received from serial port</p> <p>Note: is necessary to avoid overlapping of the two methods. Enabling new method, the old method for transmission timer(#SCFG) is automatically disabled to avoid overlapping.</p>

	<p>Note: check if new data have been received from serial port is done with a granularity that is directly related to #SCFG &lt;txTo&gt; setting with a maximum period of 1 sec.</p> <p><b>&lt;abortConnAttempt&gt;</b> - Enable connection attempt(#SD/#SKTD/#SKTOP) abort before CONNECT(online mode) or OK(command mode)</p> <p>0 – Not possible to interrupt connection attempt      1 – It is possible to interrupt the connection attempt (&lt;connTo&gt; set by #SCFG or DNS resolution running if required)</p> <p>and give back control to AT interface by reception of a character.      As soon as the control has been given to the AT interface the ERROR message will be received on the interface itself.</p> <p><b>&lt;sringLen&gt;</b> - this parameter sets the length of data received in one SRING URC in sring mode 2 or 3 ( see AT#SCFGEXT )</p> <p>0 – factory default, means 64 bytes      1 – means that the length is equal to the maximum TCP payload size accepted in download in case of TCP connections, same as 0 in case of UDP connections      64..1472</p> <p><b>&lt;sringTo&gt;</b> - this parameter sets the delay among one SRING URC and the other, in sring mode 2 or 3 ( see AT#SCFGEXT )</p> <p>0 – factory default, means 10 hundreds of milliseconds      1..10: value in hundreds of milliseconds      Note: values are automatically saved in NVM.</p> <p>Note2: in case AT#BASE64 has been set on the same connId, the parameter &lt;sringLen&gt; will affect the length of the data read from the socket at each SRING, but this length will always be a multiple of 78 or 76 (depending on the type of decoding set with AT#BASE64) and user will get less due to decoding.</p> <p><b>&lt;noCarrierMode&gt;</b> - This parameter is supported only for 13.00.xxx SW version, starting from 13.00.xx4: permits to choose <b>NO CARRIER</b> indication format when the socket is closed as follows</p> <p>0 – <b>NO CARRIER</b>      (default)      Indication is sent as usual, without additional information</p>
--	--

	<p><b>1 – NO CARRIER:&lt;connId&gt;</b>          Indication of current &lt;connId&gt; socket connection identifier is added</p> <p><b>2 – NO CARRIER:&lt;connId&gt;,&lt;cause&gt;</b>          Indication of current &lt;connId&gt; socket connection identifier and closure &lt;cause&gt; are added          For possible &lt;cause&gt; values, see also #SLASTCLOSURE</p> <p>Note: like #SLASTCLOSURE, in case of subsequent consecutive closure causes are received, the original disconnection cause is indicated.</p> <p>Note: in the case of command mode connection and remote closure with subsequent inactivity timeout closure without retrieval of all available data(#SRECV or SRING mode 2), it is indicated cause 1 for both possible FIN and RST from remote.</p>
<b>AT#SCFGEXT2?</b>	Read command returns the current socket extended configuration parameters values for all the six sockets, in the format:  <b>#SCFGEXT2:&lt;connId1&gt;,&lt;bufferStart1&gt;</b> <b>&lt;abortConnAttempt1&gt;,&lt;sringLen1&gt;,&lt;sringTo1&gt;,&lt;noCarrierMode1&gt;&lt;CR&gt;&lt;LF&gt;</b> <b>...</b> <b>#SCFGEXT2:&lt;connId6&gt;,&lt;bufferStart6&gt;,&lt;abortConnAttempt6&gt;,&lt;sringLen6&gt;,&lt;sringTo6&gt;,&lt;noCarrierMode6&gt;&lt;CR&gt;&lt;LF&gt;</b>
<b>AT#SCFGEXT2=?</b>	Test command returns the range of supported values for all the subparameters.
Example	<pre>AT#SCFGEXT2=1,1 OK</pre> <pre>AT#SCFGEXT2=2,1 OK</pre> <pre>AT#SCFGEXT2? #SCFGEXT2: 1,1,0,0,0,0 #SCFGEXT2: 2,1,0,0,0,0 #SCFGEXT2: 3,0,0,0,0,0 #SCFGEXT2: 4,0,0,0,0,0 #SCFGEXT2: 5,0,0,0,0,0 #SCFGEXT2: 6,0,0,0,0,0</pre>

	<p>OK</p> <p>AT#SCFG?      #SCFG: 1,1,300,90,600,50      #SCFG: 2,1,300,90,600,50      #SCFG: 3,1,300,90,600,50      #SCFG: 4,2,300,90,600,50      #SCFG: 5,2,300,90,600,50      #SCFG: 6,2,300,90,600,50</p> <p>OK</p> <p>AT#SCFG=1,1,300,90,600,30      OK</p> <p>Current configuration: socket with connId 1 and 2 are configured with new transmission timer behaviour.      &lt;txTo&gt; corresponding value has been changed(#SCFG) for connId 1, for connId 2 has been left to default value.</p>
--	--

### 3.5.7.6.8. Socket Dial - #SD

#SD - Socket Dial	SELINT 2
<p>AT#SD=&lt;connId&gt;,      &lt;txProt&gt;,&lt;rPort&gt;,      &lt;IPaddr&gt;      [,&lt;closureType&gt;      [,&lt;lPort&gt;      [,&lt;connMode&gt;]]]</p>	<p>Execution command opens a remote connection via socket.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;connId&gt; - socket connection identifier 1..6</li> <li>&lt;txProt&gt; - transmission protocol 0 - TCP 1 - UDP</li> <li>&lt;rPort&gt; - remote host port to contact 1..65535</li> <li>&lt;IPaddr&gt; - address of the remote host, string type. This parameter can be either:             <ul style="list-style-type: none"> <li>- any valid IP address in the format: “xxx.xxx.xxx.xxx”</li> <li>- any host name to be solved with a DNS query</li> </ul> </li> <li>&lt;closureType&gt; - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote.</li> <li>&lt;lPort&gt; - UDP connections local port 1..65535</li> <li>&lt;connMode&gt; - Connection mode 0 - online mode connection (default)</li> </ul>

#SD - Socket Dial	SELINT 2
	<p>1 - command mode connection</p> <p>Note: &lt;closureType&gt; parameter is valid for TCP connections only and has no effect (if used) for UDP connections.</p> <p>Note: &lt;IPort&gt; parameter is valid for UDP connections only and has no effect (if used) for TCP connections.</p> <p>Note: if we set &lt;connMode&gt; to <b>online mode connection</b> and the command is successful we enter in <b>online data mode</b> and we see the intermediate result code <b>CONNECT</b>. After the <b>CONNECT</b> we can suspend the direct interface to the socket connection (nb the socket stays open) using the escape sequence (+++): the module moves back to <b>command mode</b> and we receive the final result code <b>OK</b> after the suspension. After such a suspension, it's possible to resume it in every moment (unless the socket inactivity timer timeouts, see <b>#SCFG</b>) by using the <b>#SO</b> command with the corresponding &lt;connId&gt;.</p> <p>Note: if we set &lt;connMode&gt; to <b>command mode connection</b> and the command is successful, the socket is opened and we remain in <b>command mode</b> and we see the result code <b>OK</b>.</p> <p>Note: if there are input data arrived through a connected socket and not yet read because the module entered <b>command mode</b> before reading them (after an escape sequence or after #SD has been issued with &lt;connMode&gt; set to <b>command mode connection</b>), these data are buffered and we receive the <b>SRING</b> URC (<b>SRING</b> presentation format depends on the last <b>#SCFGEXT</b> setting); it's possible to read these data afterwards issuing <b>#SRECV</b>. Under the same hypotheses it's possible to send data while in <b>command mode</b> issuing <b>#SEND</b></p> <p>Note: resume of the socket(#SO) after suspension or closure(#SH) has to be done on the same instance on which the socket was opened through #SD. In fact, suspension has been done on the instance itself.</p>
AT#SD=?	Test command reports the range of values for all the parameters.
Example	<p><i>Open socket 1 in online mode</i></p> <pre>AT#SD=1,0,80,"www.google.com",0,0,0 CONNECT ...</pre> <p><i>Open socket 1 in command mode</i></p> <pre>AT#SD=1,0,80,"www.google.com",0,0,1 OK</pre>

### 3.5.7.6.9. Socket Restore - #SO

#SO - Socket Restore	SELINT 2
AT#SO=<connId>	Execution command resumes the direct interface to a socket connection which has been suspended by the escape sequence.  Parameter: <connId> - socket connection identifier 1..6
AT#SO=?	Test command reports the range of values for <connId> parameter.

### 3.5.7.6.10. Socket Listen - #SL

#SL - Socket Listen	SELINT 2
AT#SL=<connId>, <listenState>, <listenPort> >[,<closure type>]	This command opens/closes a socket listening for an incoming TCP connection on a specified port.  Parameters: <connId> - socket connection identifier 1..6 <listenState> - 0 - closes socket listening 1 - starts socket listening <listenPort> - local listening port 1..65535 <closure type> - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote.  Note: if successful, the command returns a final result code <b>OK</b> . If the ListenAutoRsp flag has not been set through the command AT#SCFGEXT (for the specific connId), then, when a TCP connection request comes on the input port, if the sender is not filtered by internal firewall (see #FRWL), an URC is received:  +SRING : <connId>  Afterwards we can use #SA to accept the connection or #SH to refuse it.  If the ListenAutoRsp flag has been set, then, when a TCP connection request comes on the input port, if the sender is not filtered by the internal firewall (see command #FRWL), the connection is automatically accepted: the <b>CONNECT</b> indication is given and the modem goes into <b>online data mode</b> .  If the socket is closed by the network the following URC is received:

#SL - Socket Listen		SELINT 2
	<b>#SL: ABORTED</b>	
	Note: when closing the listening socket <listenPort> is a don't care parameter	
<b>AT#SL?</b>	Read command returns all the actual listening TCP sockets.	
<b>AT#SL=?</b>	Test command returns the range of supported values for all the subparameters.	
Example	<p><i>Next command opens a socket listening for TCP on port 3500 without.</i></p> <p>AT#SL=1,1,3500 OK</p>	

### 3.5.7.6.11. Socket Listen UDP - #SLUDP

#SLUDP - Socket Listen UDP		SELINT 2
<b>AT#SLUDP=&lt;connId&gt;</b> >, <listenState>, <listenPort>	<p>This command opens/closes a socket listening for an incoming UDP connection on a specified port.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;connId&gt; - socket connection identifier 1..6</li> <li>&lt;listenState&gt; - 0 - closes socket listening 1 - starts socket listening</li> <li>&lt;listenPort&gt; - local listening port 1..65535</li> </ul> <p>Note: if successful, the command returns a final result code <b>OK</b>. If the ListenAutoRsp flag has not been set through the command AT#SCFGEXT (for the specific connId), then, when an UDP connection request comes on the input port, if the sender is not filtered by internal firewall (see <b>#FRWL</b>), an URC is received:</p> <p><b>+SRING :&lt;connId&gt;</b></p> <p>Afterwards we can use <b>#SA</b> to accept the connection or <b>#SH</b> to refuse it.</p> <p>If the ListenAutoRsp flag has been set, then, when an UDP connection request comes on the input port, if the sender is not filtered by the internal firewall (see command <b>#FRWL</b>), the connection is automatically accepted: the <b>CONNECT</b> indication is given and the modem goes into <b>online data mode</b>.</p> <p>If the socket is closed by the network the following URC is received:</p> <p><b>#SLUDP: ABORTED</b></p>	

#SLUDP - Socket Listen UDP		SELINT 2
	Note: when closing the listening socket <listenPort> is a don't care parameter	
AT#SLUDP?	Read command returns all the actual listening UDP sockets.	
AT#SLUDP=?	Test command returns the range of supported values for all the subparameters.	
Example	<p><i>Next command opens a socket listening for UDP on port 3500.</i></p> <pre>AT#SLUDP=1,1,3500 OK</pre>	

### 3.5.7.6.12. Socket Accept - #SA

#SA - Socket Accept		SELINT 2
AT#SA=<connId> [,<connMode>]	<p>Execution command accepts an incoming socket connection after an URC <b>SRING: &lt;connId&gt;</b></p> <p>Parameter:</p> <ul style="list-style-type: none"> <li>&lt;connId&gt; - socket connection identifier 1..6</li> <li>&lt;connMode&gt; - Connection mode, as for command <b>#SD</b>.</li> </ul> <ul style="list-style-type: none"> <li>0 - online mode connection (default)</li> <li>1 - command mode connection</li> </ul> <p>Note: the <b>SRING</b> URC has to be a consequence of a <b>#SL</b> issue.</p> <p><b>Note: setting the command before to having received a SRING will result in an ERROR indication, giving the information that a connection request has not yet been received</b></p>	
AT#SA=?	Test command reports the range of values for all the parameters.	

### 3.5.7.6.13. Receive Data In Command Mode - #SRECV

#SRECV - Receive Data In Command Mode		SELINT 2
AT#SRECV=<connId>,<maxByte>,[<UDPInfo>]	<p>Execution command permits the user to read data arrived through a connected socket, but buffered and not yet read because the module entered <b>command mode</b> before reading them; the module is notified of these data by a <b>SRING</b> URC, whose presentation format depends on the last <b>#SCFGEXT</b> setting.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;connId&gt; - socket connection identifier</li> </ul>	

#SRECV - Receive Data In Command Mode	SELINT 2
	<p>1..6  <b>&lt;maxByte&gt;</b> - max number of bytes to read          1..1500</p> <p><b>&lt;UDPInfo&gt;</b>          0 – UDP information disabled ( default )          1 – UDP information enabled: data are read just until the end of the UDP datagram and the response carries information about the remote IP address and port and about the remaining bytes in the datagram.</p> <pre>AT#SRECV=&lt;connId&gt;,&lt;maxBytes&gt;,1 #SRECV: &lt;sourceIP&gt;,&lt;sourcePort&gt;&lt;connId&gt;,&lt;recData&gt;, &lt;dataLeft&gt; data</pre> <p>Note: issuing #SRECV when there's no buffered data raises an error.</p> <p>Note: The <b>&lt;UDPInfo&gt;</b> parameter is not available in SW 13.00.002.</p>
AT#SRECV=?	<p>Test command returns the range of supported values for parameters  <b>&lt;connId&gt;</b>,<b>&lt;maxByte&gt;</b> and <b>&lt;UDPInfo&gt;</b></p>
Example	<p><b>SRING URC (&lt;srMode&gt; be 0, &lt;dataMode&gt; be 0)</b> telling data have just come through connected socket identified by <b>&lt;connId&gt;=1</b> and are now buffered</p> <p>SRING: 1</p> <p><i>Read in text format the buffered data</i></p> <pre>AT#SRECV=1,15 #SRECV: 1,15 stringa di test</pre> <p>OK</p> <p><i>Or:</i></p> <p><i>if the received datagram, received from &lt;IPaddr and &lt;IPport&gt; is of 60 bytes</i></p> <pre>AT#SRECV=1,15,1 #SRECV: &lt;IPaddr&gt;,&lt;IPport&gt;,1,15,45 stringa di test</pre> <p>OK</p> <p><b>SRING URC (&lt;srMode&gt; be 1, &lt;dataMode&gt; be 1)</b> telling 15 bytes data have just come through connected socket identified by <b>&lt;connId&gt;=2</b> and are now buffered</p> <p>SRING: 2,15</p> <p><i>Read in hexadecimal format the buffered data</i></p> <pre>AT#SRECV=2,15 #SRECV: 2,15 737472696e67612064692074657374</pre> <p>OK</p> <p><i>Or:</i></p> <p><i>if the received datagram, received from &lt;IPaddr and &lt;IPport&gt; is of 60 bytes</i></p> <pre>AT#SRECV=2,15</pre>

#SRECV - Receive Data In Command Mode	SELINT 2
<pre>#SRECV: &lt;IPAddr&gt;,&lt;IPport&gt;,2,15,45 737472696e67612064692074657374  OK  SRING URC (&lt;srMode&gt; be 2, &lt;dataMode&gt; be 0) displaying (in text format) 15 bytes data that have just come through connected socket identified by &lt;connId&gt;=3; it's no necessary to issue #SRECV to read the data; no data remain in the buffer after this URC SRING: 3,15, stringa di test</pre>	

### 3.5.7.6.14. Send Data In Command Mode - #SEND

#SEND - Send Data In Command Mode	SELINT 2
<p><b>AT#SEND=</b>  <b>&lt;connId&gt;</b></p> <p>Execution command permits, while the module is in <b>command mode</b>, to send data through a connected socket.</p> <p>Parameters:</p> <p><b>&lt;connId&gt;</b> - socket connection identifier          1..6</p> <p>The device responds to the command with the prompt '<b>&gt;</b>'          &lt;greater_than&gt;&lt;space&gt; and waits for the data to send.</p> <p>To complete the operation send <b>Ctrl-Z</b> char (<b>0x1A</b> hex); to exit without writing the message send <b>ESC</b> char (<b>0x1B</b> hex).</p> <p>If data are successfully sent, then the response is <b>OK</b>.          If data sending fails for some reason, an error code is reported</p> <p>Note: the maximum number of bytes to send is 1024 bytes for versions till 7.03.02/7.02.07 and from 10.0.x.xx0 till 10.0.x.xx2,  <b>1500(TCP)/1472(UDP)</b> bytes for versions starting from 10.0.x.xx3 ; trying to send more data will cause the surplus to be discarded and lost.</p> <p>Note: it's possible to use <b>#SEND</b> only if the connection was opened by <b>#SD</b>, else the ME is raising an error.</p> <p>Note: a byte corresponding to BS char(0x08) is treated with its corresponding meaning; therefore previous byte will be cancelled (and BS char itself will not be sent)</p>	
<p><b>AT#SEND=?</b></p> <p>Test command returns the range of supported values for parameter <b>&lt;connId&gt;</b></p> <p><b>Example</b></p> <p><i>Send data through socket number 2</i></p> <pre>AT#SEND=2 &gt;Test&lt;CTRL-Z&gt; OK</pre>	

### 3.5.7.6.15. Send data in Command Mode extended - #SSENDEXT

#SSENDEXT - Send Data In Command Mode extended	SELINT 2
<p><b>AT#SSENDEXT=</b>  <b>&lt;connId&gt;</b>,  <b>&lt;bytestosend&gt;</b></p> <p>Execution command permits, while the module is in <b>command mode</b>, to send data through a connected socket including all possible octets (from 0x00 to 0xFF).</p> <p>Parameters:</p> <p>&lt;<b>connId</b>&gt; - socket connection identifier      1..6</p> <p>&lt;<b>bytestosend</b>&gt; - number of bytes to be sent      Please refer to test command for range</p> <p>The device responds to the command with the prompt '<b>&gt;</b>'      &lt;greater_than&gt;&lt;space&gt; and waits for the data to send.      When &lt;bytestosend&gt; bytes have been sent, operation is automatically completed.      If data are successfully sent, then the response is <b>OK</b>.      If data sending fails for some reason, an error code is reported.</p> <p>Note: it's possible to use #SSENDEXT only if the connection was opened by <b>#SD</b>, else the ME is raising an error.</p> <p>Note: all special characters are sent like a generic byte.      (For instance: 0x08 is simply sent through the socket and don't behave like a BS, i.e. previous character is not deleted)</p>	
<p><b>AT#SSENDEXT=?</b></p> <p>Test command returns the range of supported values for parameters &lt;<b>connId</b>&gt; and &lt;<b>bytestosend</b>&gt;</p>	
<p>Example</p> <p>Open the socket in command mode:      at#sd=1,0,&lt;port&gt;,"IP address",0,0,1      OK</p> <p>Give the command specifying total number of bytes as second parameter:</p> <p>at#ssendext=1,256      &gt; ..... ; // Terminal echo of bytes sent is displayed here      OK</p> <p>All possible bytes(from 0x00 to 0xFF) are sent on the socket as generic bytes.</p>	

### 3.5.7.6.16. IP Easy Authentication Type - #SGACTAUTH

#SGACTAUTH – Easy IP Authentication Type		SELINT 2
AT#SGACTAUTH= <type>	<p>Set command sets the authentication type for IP Easy</p> <p>This command has effect on the authentication mode used on AT#SGACT or AT#GPRS commands.</p> <p>Parameter  <b>&lt;type&gt;</b></p> <ul style="list-style-type: none"> <li>0 - no authentication</li> <li>1 - PAP authentication (factory default)</li> <li>2 - CHAP authentication</li> </ul> <p>Note: the parameter is not saved in NVM</p> <p>Note: PAP Authentication is default when AT#SGACT contains username e/o password.</p> <p>No Authentication is default when AT#SGACT doesn't contains username and password.</p>	
AT#SGACTAUTH?	Read command reports the current IP Easy authentication type, in the format: <b>#SGACTAUTH: &lt;type&gt;</b>	
AT#SGACTAUTH =?	Test command returns the range of supported values for parameter <b>&lt;type&gt;</b> .	

### 3.5.7.6.17. Context activation and configuration - #SGACTCFG

#SGACTCFG - Context Activation and Configuration		SELINT 2
AT#SGACTCFG= <cid>, <retry>, [,<delay> [,<urcmode>]]	<p>Execution command is used to enable or disable the automatic activation/reactivation of the context for the specified PDP context, to set the maximum number of attempts and to set the delay between an attempt and the next one. The context is activated automatically after every GPRS Attach or after a NW PDP CONTEXT deactivation if at least one IPEasy socket is configured to this context (see AT#SCFG).</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;cid&gt; - PDP context identifier (see +CGDCONT command)</li> <li>1..5 - numeric parameter which specifies a particular PDP context definition</li> <li>&lt;retry&gt; - numeric parameter which specifies the maximum number of context activation attempts in case of activation failure. The value belongs to the following range: 0 - 15</li> <li>0 - disable the automatic activation/reactivation of the context (default)</li> <li>&lt;delay&gt; - numeric parameter which specifies the delay in seconds between an</li> </ul>	

	<p>attempt and the next one. The value belongs to the following range: 180 - 3600</p> <p>&lt;urcmode&gt; - URC presentation mode  0 - disable unsolicited result code (default)  1 - enable unsolicited result code, after an automatic activation/reactivation, of the local IP address obtained from the network. It has meaning only if &lt;auto&gt;=1. The unsolicited message is in the format:</p> <p>#SGACT: &lt;ip_address&gt;</p> <p>reporting the local IP address obtained from the network.</p> <p>Note: the URC presentation mode &lt;urcmode&gt; is related to the current AT instance only. Last &lt;urcmode&gt; setting is saved for every instance as extended profile parameter, thus it is possible to restore it even if the multiplexer control channel is released and set up, back and forth.</p> <p>Note: &lt;retry&gt; and &lt;delay&gt; setting are global parameter saved in NVM</p> <p>Note: if the automatic activation is enabled on a context, then it is not allowed to modify by the command AT#SCFG the association between the context itself and the socket connection identifier; all the other parameters of command AT#SCFG are modifiable while the socket is not connected</p>
AT#SGACTCFG?	<p>Read command reports the state of all the five contexts, in the format:</p> <p>#SGACTCFG: &lt;cid1&gt;,&lt;retry1&gt;,&lt;delay1&gt;,&lt;urcmode&gt;CR&lt;LF&gt;  ...  #SGACTCFG: &lt;cid5&gt;,&lt;retry5&gt;,&lt;delay5&gt;,&lt;urcmode&gt;</p> <p>where:</p> <p>&lt;cidn&gt; - as &lt;cid&gt; before  &lt;retryn&gt; - as &lt;retry&gt; before  &lt;delayn&gt; - as &lt;delay&gt; before  &lt;urcmode&gt; - as &lt;urcmode&gt; before</p>
AT#SGACTCFG =?	<p>Test command reports supported range of values for parameters &lt;cid&gt;,&lt;retry&gt;,&lt;delay&gt; and &lt;urcmode&gt;</p>

### 3.5.7.6.18. Context activation and configuration extended - #SGACTCFGEXT

#SGACTCFGEXT - context activation configuration extended		SELINT 2
<b>AT#SGACTCFGEXT=</b> <b>&lt;cid&gt;,</b> <b>&lt;abortAttemptEnable&gt;</b> [,<unused> [,<unused> [,<unused>	Execution command is used to enable new features related to context activation.  Parameters:  <cid> - PDP context identifier (see +CGDCONT command)	

JJJ	<p>1..5 - numeric parameter which specifies a particular PDP context definition</p> <p>&lt;abortAttemptEnable&gt;</p> <p>0 – old behaviour: no abort possible while attempting context activation</p> <p>1 – abort during context activation attempt is possible by sending a byte on the serial port.</p> <p>It takes effect on successive GPRS context activation attempt through #SGACT command in the following manner.</p> <p>While waiting for AT#SGACT=&lt;cid&gt;,1 response(up to 150 s) is possible to abort attempt by sending a byte and get back AT interface control(NO CARRIER indication).</p> <p><b>Note:</b></p> <p>If we receive delayed CTXT ACTIVATION ACCEPT after abort, network will be automatically informed of our aborted attempt through relative protocol messages(SM STATUS) and will also close on its side.</p> <p>Otherwise, if no ACCEPT is received after abort, network will be informed later of our PDP state through other protocol messages (routing area update for instance).</p>
AT#SGACTCFGEXT?	<p>Read command reports the state of all the five contexts, in the format:</p> <p>#SGACTCFGEXT: &lt;cid1&gt;,&lt;abortAttemptEnable1&gt;,0,0,0&lt;CR&gt;&lt;LF&gt;</p> <p>...</p> <p>#SGACTCFGEXT: &lt;cid5&gt;,&lt;abortAttemptEnable5&gt;,0,0,0&lt;CR&gt;&lt;LF&gt;</p> <p>where:</p> <p>&lt;cidn&gt; - as &lt;cid&gt; before</p> <p>&lt;abortAttemptEnable n&gt; - as &lt;abortAttemptEnable&gt; before</p> <p><b>Note:</b> values are automatically saved in NVM.</p>
AT#SGACTCFGEXT=?	Test command reports supported range of values for all parameters

### 3.5.7.6.19. PAD command features - #PADCMD

#PADCMD – PAD command features	SELINT 2
AT#PADCMD=<mode>	<p>This command sets features of the pending data flush to socket, opened with AT#SD command.</p> <p>Parameters:</p> <p><b>&lt;mode&gt;:</b></p> <p>Bit 1: 1 - enable forwarding; 0 – disable forwarding; Other bits reserved;</p> <p><b>Note:</b> forwarding depends on character defined by AT#PADFWD</p>

<b>AT#PADCMD?</b>	Read command reports the currently selected <mode> in the format: <b>#PADCMD: mode</b>
<b>AT#PADCMD=?</b>	Test command reports the supported range of values for parameter <mode>.

### 3.5.7.6.20. PAD forward character - #PADFWD

<b>#PADFWD – PAD forward character</b>		<b>SELINT 2</b>
<b>AT#PADFWD=&lt;char&gt;[,&lt;mode&gt;]</b>	<p>This command sets the char that immediately flushes pending data to socket, opened with AT#SD command.</p> <p>Parameters:</p> <p><b>&lt;char&gt;:</b> a number, from 0 to 255, that specifies the asci code of the char used to flush data</p> <p><b>&lt;mode&gt;:</b> flush mode, 0 – normal mode (default); 1 – reserved;</p>	
<b>AT#PADFWD?</b>	<p>Note: use AT#PADCMD to enable the socket char-flush activity.</p> <p>Read command reports the currently selected &lt;char&gt; and &lt;mode&gt; in the format: <b>#PADFWD: &lt;char&gt;,&lt;mode&gt;</b></p>	
<b>AT#PADFWD=?</b>	<p>Test command reports the supported range of values for parameters &lt;char&gt; and &lt;mode&gt;.</p>	

### 3.5.7.6.21. Base64 encoding/decoding of data sent/received on a socket - #BASE64

<b>#BASE64 – Base64 encoding/decoding of data sent/received on a skt</b>		<b>SELINT 2</b>
<b>AT#BASE64=&lt;connId&gt;,&lt;enc&gt;,&lt;dec&gt;[,&lt;unused_B&gt;[,&lt;unused_C&gt;]]</b>	<p>Set command enables base64 encoding and/or decoding of data sent/received to/from the socket in online or in command mode.</p> <p>Parameters:</p> <p><b>&lt;connId&gt;</b> - socket connection identifier 1..6</p> <p><b>&lt;enc&gt;</b> 0 – no encoding of data received from serial port. 1 - MIME RFC2045 base64 encoding of data received from serial port that have to be sent to &lt;connId&gt; socket.</p>	

Note: as indicated from RFC2045 the encoded output stream is represented

	<p>in lines of no more than 76 characters each.      Lines are defined as sequences of octets separated by a CRLF sequence.</p> <p>2 - RFC 3548 base64 encoding of data received from serial port that have to be sent to &lt;connId&gt; socket.      Note: as indicated from RFC3548 CRLF have not to be added.</p> <p><b>&lt;dec&gt;</b>      0 – no decoding of data received from socket &lt;connId&gt;.       1 - MIME RFC2045 base64 decoding of data received from socket &lt;connId&gt; and sent to serial port.      (Same rule as for &lt;enc&gt; regarding line feeds in the received file that has to be decoded)      2 - RFC3548 base64 decoding of data received from socket &lt;connId&gt; and sent to serial port.      (Same rule as for &lt;enc&gt; regarding line feeds in the received file that has to be decoded)</p> <p>Note: it is possible to use command to change current &lt;enc&gt;/&lt;dec&gt; settings for a socket already opened in command mode or in online mode after suspending it.      (In this last case obviously it is necessary to set AT#SKIPESC=1).</p> <p>Note: to use #BASE64 in command mode, if data to send exceed maximum value for #SSENDEXT command, they have to be divided in multiple parts.      These parts have to be a multiple of 57 bytes, except for the last one, to distinguish EOF condition.      (Base64 encoding rules)      For the same reason if #SRECV command is used by the application to receive data, a multiple of 78 bytes has to be considered.</p> <p>Note: to use #SRECV to receive data with &lt;dec&gt; enabled, it is necessary to consider that:      reading &lt;maxByte&gt; bytes from socket, user will get less due to decoding that is performed.</p> <p>Note: on version 10.0x.xx3 only &lt;connId&gt; 1 is available.</p> <p>Note: values are automatically saved in NVM.</p>
<b>AT# BASE64?</b>	<p>Read command returns the current &lt;enc&gt;/&lt;dec&gt; settings for all the six sockets, in the format:</p> <p><b># BASE64:&lt;connId1&gt;&lt;enc1&gt;,&lt;dec1&gt;,0,0&lt;CR&gt;&lt;LF&gt;</b></p>

	<pre>... # BASE64:&lt;connId6&gt;,&lt;enc6&gt;,&lt;dec6&gt;,0,0&lt;CR&gt;&lt;LF&gt;</pre>
<b>AT# BASE64=?</b>	<p>Test command returns the range of supported values for all the subparameters.</p>
Example	<pre>AT#SKIPESC=1 OK  AT#SD=&lt;connId&gt;,&lt;txProt&gt;,&lt;rPort&gt;,&lt;IPaddr&gt; CONNECT //Data sent without modifications(default) ..... +++ (suspension) OK  at#base64=&lt;connId&gt;,1,0 OK  AT#SO=&lt;connId&gt; CONNECT // Data received from serial port are encoded // base64 before to be sent on the socket ..... +++ (suspension) OK  at#base64=&lt;connId&gt;,0,1 OK  AT#SO=&lt;connId&gt; CONNECT // Data received from socket are decoded // base64 before to be sent on the serial port +++ (suspension) .....</pre>

### 3.5.7.6.22. Send UDP data to a specific remote host - #SENDUDP

#SENDUDP – send UDP data to a specific remote host	SELINT 2
AT#SENDUDP=<connId>,<remoteIP>,<remotePort>	<p>This command permits, while the module is in command mode, to send data over UDP to a specific remote host.</p> <p>UDP connection has to be previously completed with a first remote host through #SLUDP / #SA.</p> <p>Then, if we receive data from this or another host, we are able to send data to it.</p> <p>Like command #SEND, the device responds with '&gt;' and waits for the data to send.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;connId&gt; - socket connection identifier 1..6</li> <li>&lt;remoteIP&gt; - IP address of the remote host in dotted decimal notation, string type: "xxx.xxx.xxx.xxx"</li> <li>&lt;remotePort&gt; - remote host port 1..65535</li> </ul> <p>Note: after SRING that indicates incoming UDP data and issuing #RECV to receive data itself, through #SS is possible to check last remote host (IP/Port).</p> <p>Note: if successive resume of the socket to online mode Is performed(#SO), connection with first remote host is restored as it was before.</p> <p>Note: the maximum number of bytes to send is 1472 bytes</p>
AT#SENDUDP=?	Test command reports the supported range of values for parameters <connId>, <remoteIP> and <remotePort>
Example	<p><i>Starts listening on &lt;LocPort&gt; (previous setting of firewall through #FRWL has to be done)</i></p> <p>AT#SLUDP=1,1,&lt;LocPort&gt; OK</p> <p><i>SRING: 1 // UDP data from a remote host available</i></p> <p>AT#SA=1,1 OK</p> <p>SRING: 1</p>

	AT#SI=1 <i>#SI: 1,0,0,23,0 // 23 bytes to read</i>  OK  AT#SRECV=1,23 <i>#SRECV:1,23</i> message from first host  OK  AT#SS=1 <i>#SS: 1,2,&lt;LocIP&gt;,&lt;LocPort&gt;,&lt;RemIP1&gt;,&lt;RemPort1&gt;</i>  OK  AT#SENDUDP=1,<RemIP1>,<RemPort1> <i>&gt;response to first host</i> OK  <i>SRING: 1 // UDP data from a remote host available</i>  AT#SI=1 <i>#SI: 1,22,23,24,0 // 24 bytes to read</i>  OK  AT#SRECV=1,24 <i>#SRECV:1,24</i> message from second host  OK  AT#SS=1 <i>#SS: 1,2,&lt;LocIP&gt;,&lt;LocPort&gt;,&lt;RemIP2&gt;,&lt;RemPort2&gt;</i> OK  <i>Remote host has changed, we want to send a response:</i>  <b>AT#SENDUDP=1,&lt;RemIP2&gt;,&lt;RemPort2&gt;</b> <i>&gt;response to second host</i> OK
--	--

### 3.5.7.6.23. Send UDP data to a specific remote host extended - #SENDUDPEXT

#SENDUDPEXT – send UDP data to a specific remote host extended		SELINT 2
AT#SENDUDPEXT =<connId>,<bytestosend>, <remoteIP>,<remotePort>	<p>This command permits, while the module is in command mode, to send data over UDP to a specific remote host including all possible octets(from 0x00 to 0xFF)</p> <p>As indicated about #SENDUDP: UDP socket has to be previously opened through #SLUDP / #SA, then we are able to send data to different remote hosts</p> <p>Like #SENDEXT, the device responds with the prompt '&gt;' and waits for the data to send, operation is automatically completed when &lt;bytestosend&gt; have been sent.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;connId&gt; - socket connection identifier 1..6</li> <li>&lt;bytestosend&gt; - number of bytes to be sent 1-1472</li> <li>&lt;remoteIP&gt; - IP address of the remote host in dotted decimal notation, string type: "xxx.xxx.xxx.xxx"</li> <li>&lt;remotePort&gt; - remote host port 1..65535</li> </ul>	
AT#SENDUDPEXT=?	Test command reports the supported range of values for parameters <connId>,<bytestosend>,<remoteIP> and <remotePort>	

### 3.5.7.6.24. Socket Type - #ST

#ST – Socket Type		SELINT 2
AT#ST [=<ConnId>]	<p>Set command reports the current type of the socket ( TCP/UDP ) and its direction ( Dialer / Listener )</p> <p>Parameter:</p> <ul style="list-style-type: none"> <li>&lt;ConnId&gt; - socket connection identifier 1..6</li> </ul> <p>The response format is:</p> <p>#ST: &lt;connId&gt;,&lt;type&gt;,&lt;direction&gt;</p> <p>where</p>	

#ST – Socket Type	SELINT 2
	<p>&lt;connId&gt; - socket connection identifier 1..6</p> <p>&lt;type&gt; - socket type 0 – No socket 1 – TCP socket 2 – UDP socket</p> <p>&lt;direction&gt; - direction of the socket 0 – No 1 – Dialer 2 – Listener</p> <p>Note: issuing #ST&lt;CR&gt; causes getting information about type of all the sockets; the response format is:</p> <pre>#ST: &lt;connId1&gt;,&lt;type1&gt;,&lt;direction1&gt; &lt;CR&gt;&lt;LF&gt; ... #ST: &lt;connId6&gt;,&lt; type 6&gt;,&lt; direction 6&gt;</pre>
AT#ST=?	Test command reports the range for parameter <connId>.
Example	<p>single socket:</p> <pre>AT#ST=3 #ST: 3,2,1</pre> <p>Socket 3 is an UDP dialer.</p> <p>All sockets:</p> <pre>AT#ST #ST: 1,0,0 #ST: 2,0,0 #ST: 3,2,1 #ST: 4,2,2 #ST: 5,1,1 #ST: 6,1,2</pre> <p>Socket 1 is closed.      Socket 2 is closed.      Socket 3 is an UDP dialer      Socket 4 is an UDP listener      Socket 5 is a TCP dialer      Socket 6 is a TCP listener</p>

### 3.5.7.6.25. Detect the cause of a socket disconnection - #SLASTCLOSURE

#SLASTCLOSURE – Detect the cause of a socket disconnection	SELINT 2
<p><b>AT#SLASTCLOSURE[= &lt;connId&gt;]</b></p> <p>Execution command reports socket disconnection cause</p> <p>Parameters:  <b>&lt;connId&gt;</b> - socket connection identifier          1..6</p> <p>The response format is:</p> <p><b>#SLASTCLOSURE: &lt;connId&gt;,&lt;cause&gt;</b></p> <p>where:  <b>&lt;connId&gt;</b> - socket connection identifier, as before</p> <p><b>&lt;cause&gt;</b> - socket disconnection cause:</p> <ul style="list-style-type: none"> <li>0 – not available(socket has not yet been closed)</li> <li>1.- remote host TCP connection close due to FIN/END: normal remote disconnection decided by the remote application</li> <li>2 -.remote host TCP connection close due to RST, all others cases in which the socket is aborted without indication from peer (for instance because peer doesn't send ack after maximum number of retransmissions/peer is no more alive).            All these cases include all the "FATAL" errors after recv or send on the TCP socket(named as different from EWOULDBLOCK)</li> <li>3.- socket inactivity timeout</li> <li>4.- network deactivation(PDP context deactivation from network)</li> </ul> <p>Note: issuing <b>#SLASTCLOSURE&lt;CR&gt;</b> causes getting socket disconnection reason for all the sockets</p> <p>Note: any time socket is re-opened, last disconnection cause is reset. Command report 0(not available).</p> <p>Note: user closure cause(#SH) is not considered and if a user closure is performed after remote disconnection, remote disconnection cause remains saved and is not overwritten.</p>	

	<p>Note: if more consecutive closure causes are received, the original disconnection cause is saved. (For instance: if a TCP FIN is received from remote and later a TCP RST because we continue to send data, FIN cause is saved and not overwritten)</p> <p>Note: also in case of &lt;closureType&gt;(#SD) set to 255, if the socket has not yet been closed by user after the escape sequence, #SLASTCLOSURE indicates remote disconnection cause if it has been received.</p> <p>Note: in case of UDP, cause 2 indicates abnormal(local) disconnection. Cause 3 and 4 are still possible. (Cause 1 is obviously never possible)</p>
AT#SLASTCLOSURE=?	Test command reports the supported range for parameter <connId>

### 3.5.7.7. FTP AT Commands

#### 3.5.7.7.1. FTP Time-Out - #FTPTO

#FTPTO - FTP Time-Out	SELINT 0 / 1
AT#FTPTO[=<tout>]	<p>Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel.</p> <p>Parameter:  <b>&lt;tout&gt;</b> - time-out in 100 ms units            100..5000 - hundreds of ms (factory default is 100)</p> <p>Note: The parameter is not saved in NVM.</p> <p>Note: if parameter &lt;tout&gt; is omitted the behaviour of Set command is the same as Read command.</p>
AT#FTPTO?	Read command returns the current FTP operations time-out, in the format: <b>#FTPTO: &lt;tout&gt;</b>
AT#FTPTO=?	Test command returns the range of supported values for parameter <tout>

#FTPTO - FTP Time-Out	SELINT 2
AT#FTPTO=[<tout>]	Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel.

#FTPTO - FTP Time-Out		SELINT 2
	Parameter: <b>&lt;tout&gt;</b> - time-out in 100 ms units 100..5000 - hundreds of ms (factory default is 100)  Note: The parameter is not saved in NVM.	
AT#FTPTO?	Read command returns the current FTP operations time-out, in the format:  <b>#FTPTO: &lt;tout&gt;</b>	
AT#FTPTO=?	Test command returns the range of supported values for parameter <b>&lt;tout&gt;</b>	

### 3.5.7.7.2. FTP Open - #FTPOPEN

#FTPOPEN - FTP Open		SELINT 0 / 1
AT#FTPOPEN= <server:port>, <username>, <password>[, <mode>]	Execution command opens an FTP connection toward the FTP server.  Parameters: <b>&lt;server:port&gt;</b> - string type, address and port of FTP server (factory default port 21). <b>&lt;username&gt;</b> - string type, authentication user identification string for FTP. <b>&lt;password&gt;</b> - string type, authentication password for FTP. <b>&lt;mode&gt;</b> 0 - active mode (default) 1 - passive mode  Note: Before opening an FTP connection the GPRS context must have been activated by <b>AT#GPRS=1</b>	

#FTPOPEN - FTP Open		SELINT 2
AT#FTPOPEN= [<server:port>, <username>, <password>[, <mode>]]	Execution command opens an FTP connection toward the FTP server.  Parameters: <b>&lt;server:port&gt;</b> - string type, address and port of FTP server (factory default port 21). <b>&lt;username&gt;</b> - string type, authentication user identification string for FTP. <b>&lt;password&gt;</b> - string type, authentication password for FTP. <b>&lt;mode&gt;</b> 0 - active mode (factory default) 1 - passive mode  Note: Before opening an FTP connection either the GSM context must have been	

#FTPOpen - FTP Open	SELINT 2
	activated by AT#SGACT=0,1 or the PDP context #1 must have been activated by AT#SGACT=1,1 or by AT#GPRS=1
AT#FTPOpen=?	Test command returns the <b>OK</b> result code.

### 3.5.7.7.3. FTP Close - #FTPCLOSE

#FTPCLOSE - FTP Close	SELINT 0 / 1
AT#FTPCLOSE	Execution command closes an FTP connection.
AT#FTPCLOSE=?	Read command behavior is the same as Execution command.

#FTPCLOSE - FTP Close	SELINT 2
AT#FTPCLOSE	Execution command closes an FTP connection.
AT#FTPCLOSE=?	Test command returns the <b>OK</b> result code.

### 3.5.7.7.4. FTP Put - #FTPPUT

#FTPPUT - FTP Put	SELINT 0 / 1
AT#FTPPUT=<filename>	<p>Execution command, issued during an FTP connection, opens a data connection and starts sending &lt;filename&gt; file to the FTP server.</p> <p>If the data connection succeeds, a <b>CONNECT</b> indication is sent, afterward a <b>NO CARRIER</b> indication is sent when the socket is closed.</p> <p>Parameter:  <b>&lt;filename&gt;</b> - string type, name of the file (maximum length 200 characters)</p> <p>Note: use the escape sequence +++ to close the data connection.</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.</p>
AT#FTPPUT=?	Test command returns the <b>OK</b> result code.

#FTPPUT - FTP Put	SELINT 2
AT#FTPPUT=[[<filename>], [<connMode>]]	<p>Execution command, issued during an FTP connection, opens a data connection and starts sending &lt;filename&gt; file to the FTP server.</p> <p>If the data connection succeeds, a <b>CONNECT</b> indication is sent, afterward a <b>NO CARRIER</b> indication is sent when the socket is closed.</p> <p>Note: if we set &lt;connMode&gt; to 1, the data connection is opened and we remain in</p>

#FTPPUT - FTP Put	SELINT 2
	<p>command mode and we see the result code <b>OK</b> (instead of <b>CONNECT</b>)</p> <p>Parameters:</p> <p>&lt;filename&gt; - string type, name of the file (maximum length 200 characters)</p> <p>&lt;connMode&gt;</p> <p>0 - online mode 1 – command mode</p> <p>Note: use the escape sequence +++ to close the data connection.</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.</p> <p>Note: The &lt;connMode&gt; parameter is not available in SW 13.00.002.</p>
AT#FTPPUT=?	Test command reports the supported range of values for parameters <filename> and <connMode>

### 3.5.7.7.5. FTP Get - #FTPGET

#FTPGET - FTP Get	SELINT 0 / 1
AT#FTPGET= <filename>	<p>Execution command, issued during an FTP connection, opens a data connection and starts getting a file from the FTP server.</p> <p>If the data connection succeeds a <b>CONNECT</b> indication is sent, otherwise a <b>NO CARRIER</b> indication is sent.</p> <p>The file is received on the serial port.</p> <p>Parameter:</p> <p>&lt;filename&gt; - file name, string type.</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned in case no FTP connection has been opened yet.</p> <p>Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.</p>

#FTPGET - FTP Get	SELINT 2
AT#FTPGET=[<filename>]	<p>Execution command, issued during an FTP connection, opens a data connection and starts getting a file from the FTP server.</p> <p>If the data connection succeeds a <b>CONNECT</b> indication is sent.</p> <p>The file is received on the serial port.</p> <p>Parameter:</p>

#FTPGET - FTP Get	<b>SELINT 2</b>
	<p>&lt;filename&gt; - file name, string type.</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned in case no FTP connection has been opened yet.</p> <p>Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.</p>
AT#FTPGET=?	Test command returns the OK result code.

### 3.5.7.7.6. FTP GET in command mode - #FTPGETPKT

#FTPGETPKT - FTP Get in command mode	<b>SELINT 2</b>
AT#FTPGETPKT= <filename> [,<viewMode>]	<p>Execution command, issued during an FTP connection, opens a data connection and starts getting a file from the FTP server while remaining in <b>command mode</b>.</p> <p>The data port is opened and we remain in <b>command mode</b> and we see the result code <b>OK</b>.</p> <p>Retrieval from FTP server of “remotefile” is started, but data are only buffered in the module.</p> <p>It's possible to read data afterwards issuing #FTPRECV command</p> <p>Parameters:</p> <p>&lt;filename&gt; - file name, string type (maximum length: 200 characters).</p> <p>&lt;viewMode&gt; - permits to choose view mode; numeric parameter:</p> <ul style="list-style-type: none"> <li>0 – text format (default)</li> <li>1 – hexadecimal format</li> </ul> <p>Note: The command causes an <b>ERROR</b> result code to be returned in case no FTP connection has been opened yet.</p> <p>Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.</p>
AT#FTPGETPKT?	<p>Read command reports current download state for &lt;filename&gt; with &lt;viewMode&gt; chosen, in the format:</p> <p><b>#FTPGETPKT: &lt;remotefile&gt;,&lt;viewMode&gt;,&lt;eof&gt;</b></p> <p>where &lt;eof&gt; is a numeric parameter:</p> <ul style="list-style-type: none"> <li>0 = file currently being transferred</li> <li>1 = complete file has been transferred to FTP client</li> </ul>
AT#FTPGETPKT=?	Test command returns the OK result code.

### 3.5.7.7.7. FTP Type - #FTPTYPE

#FTPTYPE - FTP Type		SELINT 0 / 1
AT#FTPTYPE[=<type>]	<p>Set command, issued during an FTP connection, sets the file transfer type.</p> <p>Parameter:  <b>&lt;type&gt;</b> - file transfer type:            0 - binary            1 - ascii</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.</p> <p>Note: If the parameter is omitted then the behaviour of Set command is the same of Read command.</p>	
#FTPTYPE?	Read command returns the current file transfer type, in the format:  <b>#FTPTYPE: &lt;type&gt;</b>	
#FTPTYPE=?	<p>Test command returns the range of available values for parameter <b>&lt;type&gt;</b>:</p> <p><b>#FTPTYPE: (0,1)</b></p>	

#FTPTYPE - FTP Type		SELINT 2
AT#FTPTYPE=[<type>]	<p>Set command, issued during an FTP connection, sets the file transfer type.</p> <p>Parameter:  <b>&lt;type&gt;</b> - file transfer type:            0 - binary            1 - ascii</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.</p>	
#FTPTYPE?	Read command returns the current file transfer type, in the format:  <b>#FTPTYPE: &lt;type&gt;</b>	
#FTPTYPE=?	<p>Test command returns the range of available values for parameter <b>&lt;type&gt;</b>:</p> <p><b>#FTPTYPE: (0,1)</b></p>	

### 3.5.7.8. FTP Read Message - #FTPMSG

#FTPMSG - FTP Read Message		SELINT 0 / 1
AT#FTPMSG	Execution command returns the last response from the server.	

<b>#FTPMSG - FTP Read Message</b>	<b>SELINT 0 / 1</b>
AT#FTPMSG?	Read command behaviour is the same as Execution command.

<b>#FTPMSG - FTP Read Message</b>	<b>SELINT 2</b>
AT#FTPMSG	Execution command returns the last response from the server.
AT#FTPMSG=?	Test command returns the <b>OK</b> result code.

### 3.5.7.7.9. FTP Delete - #FTPDELE

<b>#FTPDELE - FTP Delete</b>	<b>SELINT 0 / 1</b>
AT#FTPDELE= <filename>	<p>Execution command, issued during an FTP connection, deletes a file from the remote working directory.</p> <p>Parameter: &lt;filename&gt; - string type, it's the name of the file to delete.</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.</p> <p>Note: In case of delayed server response, it is necessary to check if ERROR indication is temporary due to timing out while waiting. In this case #FTPMSG response will result temporary empty. (Checking later #FTPMSG response will match with delayed server response)</p>

<b>#FTPDELE - FTP Delete</b>	<b>SELINT 2</b>
AT#FTPDELE= <filename>	<p>Execution command, issued during an FTP connection, deletes a file from the remote working directory.</p> <p>Parameter: &lt;filename&gt; - string type, it's the name of the file to delete.</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.</p> <p>Note: In case of delayed server response, it is necessary to check if ERROR indication is temporary due to timing out while waiting. In this case #FTPMSG response will result temporary empty. (Checking later #FTPMSG response will match with delayed server response)</p>
AT#FTPDELE=?	Test command returns the <b>OK</b> result code.

### 3.5.7.7.10. FTP Print Working Directory - #FTPPWD

#FTPPWD - FTP Print Working Directory		SELINT 0 / 1
AT#FTPPWD	Execution command, issued during an FTP connection, shows the current working directory on FTP server.  Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.	

#FTPPWD - FTP Print Working Directory		SELINT 2
AT#FTPPWD	Execution command, issued during an FTP connection, shows the current working directory on FTP server.  Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.	
AT#FTPPWD=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.7.11. FTP Change Working Directory - #FTPCWD

#FTPCWD - FTP Change Working Directory		SELINT 0 / 1
AT#FTPCWD=<dirname>	Execution command, issued during an FTP connection, changes the working directory on FTP server.  Parameter: <dirname> - string type, it's the name of the new working directory.  Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.	

#FTPCWD - FTP Change Working Directory		SELINT 2
AT#FTPCWD=[<dirname>]	Execution command, issued during an FTP connection, changes the working directory on FTP server.  Parameter: <dirname> - string type, it's the name of the new working directory.  Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.	
AT#FTPCWD=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.7.12. FTP List - #FTPLIST

#FTPLIST - FTP List	SELINT 0 / 1
---------------------	--------------

#FTPLIST - FTP List		SELINT 0 / 1
AT#FTPLIST[= <name>]	<p>Execution command, issued during an FTP connection, opens a data connection and starts getting from the server the list of contents of the specified directory or the properties of the specified file.</p> <p>Parameter:  <b>&lt;name&gt;</b> - string type, it's the name of the directory or file.</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.</p> <p>Note: issuing <b>AT#FTPLIST&lt;CR&gt;</b> opens a data connection and starts getting from the server the list of contents of the working directory.</p>	

#FTPLIST - FTP List		SELINT 2
AT#FTPLIST[= [<name>]]	<p>Execution command, issued during an FTP connection, opens a data connection and starts getting from the server the list of contents of the specified directory or the properties of the specified file.</p> <p>Parameter:  <b>&lt;name&gt;</b> - string type, it's the name of the directory or file.</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.</p> <p>Note: issuing <b>AT#FTPLIST&lt;CR&gt;</b> opens a data connection and starts getting from the server the list of contents of the working directory.</p>	
AT#FTPLIST=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.7.13. Get file size - #FTPFSIZE

#FTPFSIZE – Get file size from FTP server		SELINT 2
AT#FTPFSIZE=<filename>	<p>Execution command, issued during an FTP connection, permits to get file size of &lt;filename&gt; file.</p> <p>Note:  <b>FTPTYPE=0</b> command has to be issued before <b>FTPFSIZE</b> command, to set file transfer type to binary mode.</p>	
AT# FTPFSIZE=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.7.14. FTP Append - #FTPAPP

#FTPAPP - FTP Append	SELINT 2
<b>AT#FTPAPP=</b> <code>&lt;filename&gt;</code> , <code>&lt;connMode&gt;</code>	<p>Execution command, issued during an FTP connection, opens a data connection and append data to existing <code>&lt;filename&gt;</code> file.</p> <p>If the data connection succeeds, a <b>CONNECT</b> indication is sent, afterward a <b>NO CARRIER</b> indication is sent when the socket is closed.</p> <p>Note: if we set <code>&lt;connMode&gt;</code> to 1, the data connection is opened and we remain in command mode and we see the result code <b>OK</b> (instead of <b>CONNECT</b>)</p> <p>Parameter:  <code>&lt;filename&gt;</code> - string type, name of the file.</p> <p><code>&lt;connMode&gt;</code>  0 - online mode  1 – command mode</p> <p>Note: use the escape sequence +++ to close the data connection.</p> <p>Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.</p> <p>Note: The <code>&lt;connMode&gt;</code> parameter is not available in SW 13.00.002.</p>
<b>AT#FTPAPP=?</b>	Test command reports the supported range of values for parameters <code>&lt;filename&gt;</code> and <code>&lt;connMode&gt;</code>

### 3.5.7.7.15. send data on a FTP data port while the module is in command mode - #FTPAPPEXT

#FTPAPPEXT – send data on a FTP data port while the module is in command mode	SELINT 2
<b>AT#FTPAPPEXT=</b> <code>&lt;bytestosend&gt;[,&lt;eof&gt;]</code>	<p>This command permits to send data on a FTP data port while the module is in command mode.</p> <p>FTP data port has to be previously opened through <b>#FTPPUT</b> (or <b>#FTPAPP</b>) with <code>&lt;connMode&gt;</code> parameter set to command mode connection.</p> <p>Parameters:</p> <p><code>&lt;bytestosend&gt;</code> - number of bytes to be sent  1..1500</p> <p><code>&lt;eof&gt;</code> - data port closure  0 – normal sending of data chunk  1 – close data port after sending data chunk</p>

	<p>The device responds to the command with the prompt &lt;greater_than&gt;&lt;space&gt; and waits for the data to send. When &lt;bytestosend&gt; bytes have been sent, operation is automatically completed.</p> <p>If (all or part of the) data are successfully sent, then the response is:</p> <pre>#FTPAPP EXT: &lt;sentbytes&gt;</pre> <p><b>OK</b></p> <p>Where &lt;sentbytes&gt; are the number of sent bytes.</p> <p>Note: &lt;sentbytes&gt; could be less than &lt;bytestosend&gt;</p> <p>If data sending fails for some reason, an error code is reported.</p>
<b>AT#FTPAPP EXT=?</b>	Test command reports the supported range of values for parameters <bytestosend> and <eof>
Example	<pre>AT#FTPOPEN="IP",username,password OK</pre> <p><i>AT#FTPPUT=&lt;filename&gt;,1 -&gt; the new param 1 means that we open the connection in command mode</i></p> <pre>OK</pre> <p><i>// Here data socket will stay opened, but interface will be //available(command mode)</i></p> <pre>AT#FTPAPP EXT=Size &gt;... write here the binary data. As soon Size byte are written, data are sent and OK is returned #FTPAPP EXT: &lt;SentBytes&gt; OK</pre> <p>.....</p> <p><i>// Last #FTPAPP EXT will close the data socket, because // second(optional) parameter has this meaning:</i></p>

	<pre> AT#FTPAPPEXT=Size,I &gt;...write here the binary data. As soon Size byte are written, data are sent and OK is returned #FTPAPPEXT: &lt;SentBytes&gt; OK  // If the user has to reopen the data port to send another // (or append to the same) file, he can restart with the // FTTPPUT(or FTPAPP.) // Then FTPAPPEXT,... to send the data chunks on the //reopened data port.  // Note: if while sending the chunks the data port is closed // from remote, user will be aware of it because #FTPAPPEXT // will indicate ERROR and cause (available if previously //issued the command AT+CME=2) will indicate that //socket has been closed. // Also in this case obviously, data port will have to be //reopened with FTTPPUT and so on...(same sequence) </pre>
--	---

### 3.5.7.7.16. Set restart position - # FTPREST

#FTPREST – Set restart position for FTP GET		SELINT 2
<b>AT#FTPREST=</b> <b>&lt;restartposition&gt;</b>	<p>Set command sets the restart position for successive FTPGET (or FTPGETPKT) command.</p> <p>It permits to restart a previously interrupted FTP download from the selected position in byte.</p> <p>Parameter:  &lt;restartposition&gt; position in byte of restarting for successive FTPGET (or FTPGETPKT)</p> <p>Note:  It's necessary to issue FTPTYPE=0 before successive FTPGET (or FTPGETPKT command) to set binary file transfer type.</p> <p>Note:  Setting &lt;restartposition&gt; has effect on successive FTP download.  After successive successfully initiated FTPGET(or FTPGETPKT) command &lt;restartposition&gt; is automatically reset.</p> <p>Note: value set for &lt;restartposition&gt; has effect on next data transfer(data port opened by FTPGET or FTPGETPKT).  Then &lt;restartposition&gt; value is automatically assigned to 0 for next download.</p>	

#FTPREST – Set restart position for FTP GET		SELINT 2
<b>AT#FTPREST?</b>	Read command returns the current <restartposition>  #FTPREST: <restartposition>	
<b>AT#FTPREST=?</b>	Test command returns the OK result code.	

### 3.5.7.7.17. Receive Data In Command Mode - #FTP\_RECV

#FTP_RECV – Receive Data In Command Mode		SELINT 2
<b>AT#FTP_RECV=</b> <b>&lt;blocksize&gt;</b>	<p>Execution command permits the user to transfer at most &lt;blocksize&gt; bytes of remote file, provided that retrieving from the FTP server has been started with a previous #FTPGETPKT command, onto the serial port.</p> <p>This number is limited to the current number of bytes of the remote file which have been transferred from the FTP server.</p> <p>Parameters:</p> <p>&lt;blocksize&gt; - max number of bytes to read 1..3000</p> <p>Note: it's necessary to have previously opened FTP data port and started download and buffering of remote file through #FTPGETPKT command</p> <p>Note: issuing #FTP_RECV when there's no FTP data port opened raises an error.</p> <p>Note: data port will stay opened if socket is temporary waiting to receive data(FTP_RECV returns 0 and FTPGETPKT gives a EOF 0 indication).</p>	

#FTP_RECV – Receive Data In Command Mode	SELINT 2
<b>AT# FTP_RECV?</b>	Read command reports the number of bytes currently received from FTP server, in the format:  #FTP_RECV: <available>
<b>AT# FTP_RECV=?</b>	Test command returns the range of supported values for <blocksize> parameter.
Example	<pre>AT#FTP_RECV? #FTP_RECV: 3000  OK  Read required part of the buffered data:  AT#FTP_RECV=400 #FTP_RECV: 400  Text row number 1 * 111111111111111111111111 * Text row number 2 * 2222222222222222222222 * Text row number 3 * 3333333333333333333333 * Text row number 4 * 444444444444444444444444 * Text row number 5 * 555555555555555555555555 * Text row number 6 * 666666666666666666666666 * Text row number 7 * 777777777777777777777777 * Text row number 8 * 888888888888888888888888  OK  AT#FTP_RECV =200 #FTP_RECV: 200 88888 *  Text row number 9 * 99999999999999999999999999999999 * Text row number 10 * AAAAAAAAAAAAAAAAAAAAAAA * Text row number 12 * BBBB BBBB BBBB BBBB BBBB BBBB * Text row number 13 * CCCCCCCCCCCCCCCC  OK</pre> <p>Note: to check when you have received complete file it's possible to use</p>

#FTP_RECV – Receive Data In Command Mode	SELINT 2
	<p>AT#FTPGETPKT read command:</p> <pre>AT#FTPGETPKT? #FTPGETPKT: sample.txt,0,1</pre> <p>OK</p> <p>(you will get &lt;eof&gt; set to 1)</p>

### 3.5.7.7.18. FTP configuration - #FTPCFG

#FTPCFG – ftp configuration	SELINT 2
<p><b>AT#FTPCFG=&lt;tout&gt;,&lt;IPPIgnoring&gt;[,&lt;FTPSEn&gt; [,&lt;FTPSendSize&gt;]]</b></p>	<p><b>&lt;tout&gt;</b> - time-out in 100 ms units 100..5000 - hundreds of ms (factory default is 100)  Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel.  Note: The parameter is not saved in NVM.</p> <p><b>&lt;IPPIgnoring&gt;</b> 0: No IP Private ignoring. During a FTP passive mode connection client uses the IP address received from server, even if it is a private IPV4 address. 1: IP Private ignoring enabled. During a FTP passive mode connection if the server sends a private IPV4 address the client doesn't consider this and connects with server using the IP address used in AT#FTPOpen.  Note: obviously during a FTP active mode connection, parameter doesn't take effect because it has no meaning.</p> <p><b>[,&lt;FTPSEn&gt;]</b> 0 – Disable FTPS security: all FTP commands will perform plain FTP connections. 1 – Enable FTPS security: from now on any FTP session opened through FTP commands will be compliant to FTPS protocol, providing authentication and encrypted communication.</p> <p><b>&lt;FTPSendSize&gt;</b> - This parameter is supported only for 13.00.xxx SW version, starting from 13.00.xx4: send size to be used by the TCP/IP stack for data sending. It takes effect on send size when FTP upload in online mode is running.</p>

	<p>Send is not called until &lt;FTPSendSize&gt; bytes are reached, unless internal transmission timer(5 sec) expires.</p> <p>0 – select automatically default value(300).. 1 – 1500 – send size in bytes.</p> <p>Note: in order to maintain retrocompatibility, read command (AT#FTPCFG?) doesn't show this parameter until it is set.</p> <p>Once it is set, read command includes it in the response no matter if later it is included or not in set command.</p> <p>Note: in FTPS mode, FTP commands response time is generally bigger than in normal FTP mode. This latency is mainly due to the SSL handshake that has to be done at the opening of the FTP session (#FTPOPEN) and whenever a data exchange is required (#FTPPUT, #FTPGET etcetera).</p> <p>Note: FTP security cannot be enabled if an SSL socket has been activated by means of #SSLD or #SSLFASTD. Moreover, trying to dial an SSL socket when &lt;enable&gt;=1 raises an error.</p> <p>Note: any &lt;enable&gt; change is forbidden during an open FTP connection (with or without security). Furthermore, SSL configuration settings are forbidden during FTPS connections</p>
<b>AT#FTPCFG?</b>	Read command reports the currently selected parameters in the format: <b>#FTPCFG: &lt;tout&gt;,&lt;IPPignoring&gt;,&lt;FTPSEn&gt;</b>
<b>AT+FTPCFG=?</b>	Test command reports the supported range of values for parameter(s) <b>&lt;tout&gt;,&lt;IPPignoring&gt; and &lt;FTPSEn&gt;</b>

### 3.5.7.8. Enhanced IP Easy Extension AT Commands

#### 3.5.7.8.1. Authentication User ID - #USERID

<b>#USERID - Authentication User ID</b>		<b>SELINT 0 / 1</b>
<b>AT#USERID [=&lt;user&gt;]</b>	Set command sets the user identification string to be used during the authentication step.  Parameter: <b>&lt;user&gt;</b> - string type, it's the authentication User Id; the max length for this value is the output of Test command, <b>AT#USERID=?</b> (factory default is the empty string "").	

<b>#USERID - Authentication User ID</b>		<b>SELINT 0 / 1</b>
		Note: If parameter is omitted then the behaviour of Set command is the same of Read command.
<b>AT#USERID?</b>		Read command reports the current user identification string, in the format:  <b>#USERID: &lt;user&gt;</b> .
<b>AT#USERID=?</b>		Test command returns the maximum allowed length of the string parameter <b>&lt;user&gt;</b> .
Example		AT#USERID="myName" OK AT#USERID? #USERID: "myName" OK

<b>#USERID - Authentication User ID</b>		<b>SELINT 2</b>
<b>AT#USERID= [&lt;user&gt;]</b>		Set command sets the user identification string to be used during the authentication step.  Parameter: <b>&lt;user&gt;</b> - string type, it's the authentication User Id; the max length for this value is the output of Test command, <b>AT#USERID=?</b> (factory default is the empty string "").  Note: this command is not allowed for sockets associated to a GSM context (see <b>#SCFG</b> ).
<b>AT#USERID?</b>		Read command reports the current user identification string, in the format:  <b>#USERID: &lt;user&gt;</b>
<b>AT#USERID=?</b>		Test command returns the maximum allowed length of the string parameter <b>&lt;user&gt;</b> .
Example		AT#USERID="myName" OK AT#USERID? #USERID: "myName" OK

### 3.5.7.8.2. Authentication Password - #PASSW

<b>#PASSW - Authentication Password</b>		<b>SELINT 0/1</b>
<b>AT#PASSW= &lt;pwd&gt;</b>		Set command sets the user password string to be used during the authentication step.  Parameter: <b>&lt;pwd&gt;</b> - string type, it's the authentication password; the max length for this value is the output of Test command, <b>AT#PASSW=?</b> (factory default is the empty string "").
<b>AT#PASSW=?</b>		Test command returns the maximum allowed length of the string parameter <b>&lt;pwd&gt;</b> .
Example		AT#PASSW="myPassword"

#PASSW - Authentication Password	SELINT 0/1
	OK

#PASSW - Authentication Password	SELINT 2
AT#PASSW=[<pwd>]	<p>Set command sets the user password string to be used during the authentication step.</p> <p>Parameter:  <b>&lt;pwd&gt;</b> - string type, it's the authentication password; the max length for this value is the output of Test command, <b>AT#PASSW=?</b> (factory default is the empty string "").</p> <p>Note: this command is not allowed for sockets associated to a GSM context (see <b>#SCFG</b>).</p>
AT#PASSW=?	Test command returns the maximum allowed length of the string parameter <b>&lt;pwd&gt;</b> .
Example	AT#PASSW="myPassword" OK

### 3.5.7.8.3. Packet Size - #PKTSZ

#PKTSZ - Packet Size	SELINT 0 / 1
AT#PKTSZ[=<size>]]	<p>Set command sets the default packet size to be used by the TCP/UDP/IP stack for data sending.</p> <p>Parameter:  <b>&lt;size&gt;</b> - packet size in bytes          0 - automatically chosen by the device          1..512 - packet size in bytes (factory default is 300)</p> <p>Note: issuing <b>AT#PKTSZ&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT#PKTSZ=&lt;CR&gt;</b> is the same as issuing the command <b>AT#PKTSZ=0&lt;CR&gt;</b>.</p>
AT#PKTSZ?	Read command reports the current packet size value.
	Note: after issuing command <b>AT#PKTSZ=0</b> , the Read command reports the value automatically chosen by the device.
AT#PKTSZ=?	Test command returns the allowed values for the parameter <b>&lt;size&gt;</b> .
Example	AT#PKTSZ=100 OK AT#PKTSZ? #PKTSZ: 100  OK AT#PKTSZ=0 OK AT#PKTSZ? #PKTSZ: 300 ->value automatically chosen by device

#PKTSZ - Packet Size	SELINT 0 / 1
	OK

#PKTSZ - Packet Size	SELINT 2
AT#PKTSZ=[<size>]	<p>Set command sets the default packet size to be used by the TCP/UDP/IP stack for data sending.</p> <p>Parameter:          &lt;size&gt; - packet size in bytes          0 - automatically chosen by the device          1..1500 - packet size in bytes (factory default is 300)</p> <p>Note: this command is not allowed for sockets associated to a GSM context (see #SCFG).</p>
AT#PKTSZ?	<p>Read command reports the current packet size value.</p> <p>Note: after issuing command AT#PKTSZ=0, the Read command reports the value automatically chosen by the device.</p>
AT#PKTSZ=?	<p>Test command returns the allowed values for the parameter &lt;size&gt;.</p>
Example	<pre>AT#PKTSZ=100 OK AT#PKTSZ? #PKTSZ: 100  OK AT#PKTSZ=0 OK AT#PKTSZ? #PKTSZ: 300 -&gt;value automatically chosen by device  OK</pre>

### 3.5.7.8.4. Data Sending Time-Out - #DSTO

#DSTO - Data Sending Time-Out	SELINT 0 / 1
AT#DSTO=[<tout>]]	<p>Set command sets the maximum time that the module awaits before sending anyway a packet whose size is less than the default one.</p> <p>Parameter:          &lt;tout&gt; - packet sending time-out in 100ms units (factory default is 50)          0 - no time-out, wait forever for packets to be completed before send.          1..255 hundreds of ms</p> <p>Note: In order to avoid low performance issues, it is suggested to set the data sending time-out to a value greater than 5.</p> <p>Note: this time-out applies to data whose size is less than packet size and whose sending would have been delayed for an undefined time until new data to be sent</p>

#DSTO - Data Sending Time-Out		SELINT 0 / 1
	had been received and full packet size reached.  Note: issuing AT#DSTO<CR> is the same as issuing the Read command.	
	Note: issuing AT#DSTO=<CR> is the same as issuing the command AT#DSTO=0<CR>.	
AT#DSTO?	Read command reports the current data sending time-out value.	
AT#DSTO=?	Test command returns the allowed values for the parameter <tout>.	
Example	AT#DSTO=10 ->1 sec. time-out OK AT#DSTO? #DSTO: 10  OK	

#DSTO -Data Sending Time-Out		SELINT 2
AT#DSTO=[<tout>]	Set command sets the maximum time that the module awaits before sending anyway a packet whose size is less than the default one.  Parameter: <tout> - packet sending time-out in 100ms units (factory default is 50) 0 - no time-out, wait forever for packets to be completed before send. 1..255 hundreds of ms  Note: In order to avoid low performance issues, it is suggested to set the data sending time-out to a value greater than 5.  Note: this time-out applies to data whose size is less than packet size and whose sending would have been delayed for an undefined time until new data to be sent had been received and full packet size reached.  Note: this command is not allowed for sockets associated to a GSM context (see #SCFG).	
AT#DSTO?	Read command reports the current data sending time-out value.	
AT#DSTO=?	Test command returns the allowed values for the parameter <tout>.	
Example	AT#DSTO=10 ->1 sec. time-out OK AT#DSTO? #DSTO: 10  OK	

### 3.5.7.8.5. Socket Inactivity Time-Out - #SKTTO

#SKTTO - Socket Inactivity Time-Out		SELINT 0 / 1
AT#SKTTO[=<tout>]]	Set command sets the maximum time with no data exchanging on the socket that the module awaits before closing the socket and deactivating the GPRS context.	

#SKTTO - Socket Inactivity Time-Out		SELINT 0 / 1
	<p>Parameter:</p> <p>&lt;tout&gt; - socket inactivity time-out in seconds units          0 - no time-out.          1..65535 - time-out in sec. units (factory default is 90).</p> <p>Note: this time-out applies when no data is exchanged through the socket for a long time and therefore the socket connection has to be automatically closed; the GPRS context is deactivated only if it has been activated issuing #SKTOP; if it has been activated issuing #SKTD, now it stays activated.</p> <p>Note: issuing AT#SKTTO&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT+#SKTTO=&lt;CR&gt; is the same as issuing the command AT+#SKTTO=0&lt;CR&gt;.</p>	
AT#SKTTO?	Read command reports the current socket inactivity time-out value.	
AT#SKTTO=?	Test command returns the allowed values for parameter <tout>.	
Example	AT#SKTTO=30 ->(30 sec. time-out) OK AT#SKTTO? #SKTTO: 30 OK	

#SKTTO - Socket Inactivity Time-Out		SELINT 2
AT#SKTTO=[<tout>]	<p>Set command sets the maximum time with no data exchanging on the socket that the module awaits before closing the socket and deactivating the GPRS context.</p> <p>Parameter:</p> <p>&lt;tout&gt; - socket inactivity time-out in seconds units          0 - no time-out.          1..65535 - time-out in sec. units (factory default is 90).</p> <p>Note: this time-out applies when no data is exchanged in the socket for a long time and therefore the socket connection has to be automatically closed; the GPRS context is deactivated only if it has been activated issuing #SKTOP; if it has been activated issuing #SKTD, now it stays activated.</p> <p>Note: this command is not allowed for sockets associated to a GSM context (see #SCFG).</p>	
AT#SKTTO?	Read command reports the current socket inactivity time-out value.	
AT#SKTTO=?	Test command returns the allowed values for parameter <tout>.	
Example	AT#SKTTO=30 ->(30 sec. time-out) OK AT#SKTTO? #SKTTO: 30 OK	

### 3.5.7.8.6. Socket Definition - #SKTSET

#SKTSET - Socket Definition	SELINT 0 / 1
<b>AT#SKTSET[= &lt;socket type&gt;, &lt;remote port&gt;, &lt;remote addr&gt;, [&lt;closure type&gt;], [&lt;local port&gt;]]</b>	<p>Set command sets the socket parameters values.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;socket type&gt; - socket protocol type           <ul style="list-style-type: none"> <li>0 - TCP (factory default)</li> <li>1 - UDP</li> </ul> </li> <li>&lt;remote port&gt; - remote host port to be opened 0..65535 - port number (factory default is 3333)</li> <li>&lt;remote addr&gt; - address of the remote host, string type. This parameter can be either:           <ul style="list-style-type: none"> <li>- any valid IP address in the format: xxx.xxx.xxx.xxx</li> <li>- any host name to be solved with a DNS query in the format: &lt;host name&gt; (factory default is the empty string "")</li> </ul> </li> <li>&lt;closure type&gt; - socket closure behaviour for TCP when remote host has closed           <ul style="list-style-type: none"> <li>0 - local host closes immediately (default)</li> <li>255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote.</li> </ul> </li> <li>&lt;local port&gt; - local host port to be used on UDP socket 0..65535 - port number</li> </ul> <p>Note: &lt;closure type&gt; parameter is valid only for TCP socket type, for UDP sockets shall be left unused.</p> <p>Note: &lt;local port&gt; parameter is valid only for UDP socket type, for TCP sockets shall be left unused.</p> <p>Note: The resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the #SKTSET command, then error message will be issued.</p> <p>Note: the DNS Query to be successful requests that:</p> <ul style="list-style-type: none"> <li>- the GPRS context 1 is correctly set with +CGDCONT</li> <li>- the authentication parameters are set (#USERID, #PASSW)</li> <li>- the GPRS coverage is enough to permit a connection.</li> </ul> <p>Note: If all parameters are omitted then the behaviour of Set command is the same as Read command.</p>
<b>AT#SKTSET?</b>	Read command reports the socket parameters values, in the format:  <b>AT#SKTSET: &lt;socket type&gt;,&lt;remote port&gt;,&lt;remote addr&gt;,&lt;closure type&gt;,&lt;local port&gt;</b>
<b>AT#SKTSET=?</b>	Test command returns the allowed values for the parameters.
Example	AT#SKTSET=0,1024,"123.255.020.001" OK AT#SKTSET=0,1024,"www.telit.net" OK

#SKTSET - Socket Definition	SELINT 0 / 1
Note	Issuing command #QDNS will overwrite <remote addr> setting.

#SKTSET - Socket Definition	SELINT 2
AT#SKTSET= [<socket type>, <remote port>, <remote addr>, [<closure type>], [<local port>]]	<p>Set command sets the socket parameters values.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;socket type&gt; - socket protocol type 0 - TCP (factory default) 1 - UDP</li> <li>&lt;remote port&gt; - remote host port to be opened 0..65535 - port number (factory default is 3333)</li> <li>&lt;remote addr&gt; - address of the remote host, string type. This parameter can be either: <ul style="list-style-type: none"> <li>- any valid IP address in the format: xxx.xxx.xxx.xxx</li> <li>- any host name to be solved with a DNS query in the format: &lt;host name&gt; (factory default is the empty string "")</li> </ul> </li> <li>&lt;closure type&gt; - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote.</li> <li>&lt;local port&gt; - local host port to be used on UDP socket 0..65535 - port number</li> </ul> <p>Note: &lt;closure type&gt; parameter is valid only for TCP socket type, for UDP sockets shall be left unused.</p> <p>Note: &lt;local port&gt; parameter is valid only for UDP socket type, for TCP sockets shall be left unused.</p> <p>Note: The resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the #SKTSET command, then an error message will be issued.</p> <p>Note: the DNS Query to be successful requests that:</p> <ul style="list-style-type: none"> <li>- the GPRS context 1 is correctly set with +CGDCONT</li> <li>- the authentication parameters are set (#USERID, #PASSW)</li> <li>- the GPRS coverage is enough to permit a connection.</li> </ul> <p>Note: this command is not allowed for sockets associated to a GSM context (see #SCFG).</p>
AT#SKTSET?	Read command reports the socket parameters values, in the format: <b>AT#SKTSET: &lt;socket type&gt;,&lt;remote port&gt;,&lt;remote addr&gt;,&lt;closure type&gt;,&lt;local port&gt;</b>
AT#SKTSET=?	Test command returns the allowed values for the parameters.
Example	AT#SKTSET=0,1024,"123.255.020.001" OK

#SKTSET - Socket Definition	SELINT 2
	AT#SKTSET=0,1024,"www.telit.net" OK
Note	Issuing command #QDNS will overwrite <remote addr> setting.

### 3.5.7.8.7. Socket Open - #SKTOP

#SKTOP - Socket Open	SELINT 0 / 1
AT#SKTOP	Execution command activates the context number 1, proceeds with the authentication with the user ID and password previously set by #USERID and #PASSW commands, and opens a socket connection with the host specified in the #SKTSET command. Eventually, before opening the socket connection, it issues automatically a DNS query to solve the IP address of the host name.  If the connection succeeds a CONNECT indication is sent, otherwise a NO CARRIER indication is sent.
AT#SKTOP?	Read command behaviour is the same as Execution command.
Example	AT#SKTOP ..GPRS context activation, authentication and socket open.. CONNECT

#SKTOP - Socket Open	SELINT 2
AT#SKTOP	Execution command activates the context number 1, proceeds with the authentication with the user ID and password previously set by #USERID and #PASSW commands, and opens a socket connection with the host specified in the #SKTSET command. Eventually, before opening the socket connection, it issues automatically a DNS query to solve the IP address of the host name.  If the connection succeeds a CONNECT indication is sent, otherwise a NO CARRIER indication is sent.  Note: this command is not allowed for sockets associated to a GSM context (see #SCFG).
AT#SKTOP=?	Test command returns the OK result code.
Example	AT#SKTOP ..GPRS context activation, authentication and socket open.. CONNECT
Note	This command is obsolete. It's suggested to use the couple #SGACT and #SO instead of it.

### 3.5.7.8.8. Query DNS - #QDNS

#QDNS - Query DNS	SELINT 0 / 1
AT#QDNS=<host name>	Execution command executes a DNS query to solve the host name into an IP address.

#QDNS - Query DNS		SELINT 0 / 1
	<p>Parameter:  <b>&lt;host name&gt;</b> - host name, string type.</p> <p>If the DNS query is successful then the IP address will be reported in the result code, as follows:</p> <p><b>#QDNS: &lt;host name&gt;,&lt;IP address&gt;</b></p> <p>where  <b>&lt;host name&gt;</b> - string type  <b>&lt;IP address&gt;</b> - string type, in the format “xxx.xxx.xxx.xxx”</p> <p>Note: the command has to activate the GPRS context if it was not previously activated. In this case the context is deactivated after the DNS query.</p>	
Note	This command requires that the authentication parameters are correctly set and that the GPRS network is present.	
Note	Issuing command #QDNS will overwrite <b>&lt;remote addr&gt;</b> setting for command #SKTSET.	

#QDNS - Query DNS		SELINT 2
AT#QDNS=[<host name>]	<p>Execution command executes a DNS query to solve the host name into an IP address.</p> <p>Parameter:  <b>&lt;host name&gt;</b> - host name, string type.</p> <p>If the DNS query is successful then the IP address will be reported in the result code, as follows:</p> <p><b>#QDNS: &lt;host name&gt;,&lt;IP address&gt;</b></p> <p>where  <b>&lt;host name&gt;</b> - string type  <b>&lt;IP address&gt;</b> - string type, in the format “xxx.xxx.xxx.xxx”</p> <p>Note: the command has to activate the GPRS context if it was not previously activated. In this case the context is deactivated after the DNS query. It also works with GSM context, but the GSM context has to be activated before.</p>	
AT#QDNS=?	Test command returns the <b>OK</b> result code.	
Note	This command requires that the authentication parameters are correctly set and that the GPRS network is present (or GSM, if GSM context is used).	
Note	Issuing command #QDNS will overwrite <b>&lt;remote addr&gt;</b> setting for command #SKTSET.	
Note	This command is available only on the first virtual port of CMUX and works on the	

<b>#QDNS - Query DNS</b>	<b>SELINT 2</b>
PDP context 1 and on the first ConnId ( see AT#SCFG )	

### 3.5.7.8.9. DNS Response Caching - #CACHEDNS

<b>#CACHEDNS – DNS Response Caching</b>		<b>SELINT 2</b>
AT#CACHEDNS=[<mode>]	<p>Set command enables caching a mapping of domain names to IP addresses, as does a resolver library.</p> <p>Parameter:  <b>&lt;mode&gt;</b></p> <p>0 - caching disabled; it cleans the cache too  1 - caching enabled</p> <p>Note: the validity period of each cached entry (i.e. how long a DNS response remains valid) is determined by a value called the <b>Time To Live (TTL)</b>, set by the administrator of the DNS server handing out the response.</p> <p>Note: If the cache is full (8 elements) and a new IP address is resolved, an element is deleted from the cache: the one that has not been used for the longest time.</p> <p>Note: it is recommended to clean the cache, if command +CCLK has been issued while the DNS Response Caching was enabled.</p>	
AT#CACHEDNS?	Read command reports whether the DNS Response Caching is currently enabled or not, in the format:	<b>#CACHEDNS: &lt;mode&gt;</b>
AT#CACHEDNS=?	Test command returns the currently cached mapping along with the range of available values for parameter <b>&lt;mode&gt;</b> , in the format:	<b>#CACHEDNS: [&lt;hostn1&gt;,&lt;IPaddr1&gt;,[...,[&lt;hostnn&gt;,&lt;IPaddrn&gt;,,]](0,1)</b> where: <b>&lt;hostnn&gt;</b> - hostname, string type <b>&lt;IPaddrn&gt;</b> - IP address, string type, in the format “ <b>xxx.xxx.xxx.xxx</b> ”

### 3.5.7.8.10. Manual DNS Selection - #DNS

<b>#DNS – Manual DNS Selection</b>		<b>SELINT 2</b>
AT#DNS=<cid>,<primary>,<secondary>	Set command allows to manually set primary and secondary DNS servers either for a PDP context defined by +CGDCONT or for a GSM context defined by #GSMCONT	

#DNS – Manual DNS Selection	SELINT 2
	<p>Parameters:</p> <p>&lt;cid&gt; - context identifier 0 - specifies the GSM context 1..5 - numeric parameter which specifies a particular PDP context definition</p> <p>&lt;primary&gt; - <b>manual primary DNS server</b>, string type, in the format “xxx.xxx.xxx.xxx” used for the specified cid; we’re using this value instead of the <b>primary DNS server</b> come from the network (default is “0.0.0.0”)</p> <p>&lt;secondary&gt; - <b>manual secondary DNS server</b>, string type, in the format “xxx.xxx.xxx.xxx” used for the specified cid; we’re using this value instead of the <b>secondary DNS server</b> come from the network (default is “0.0.0.0”).</p> <p>Note: if &lt;primary&gt; is “0.0.0.0” and &lt;secondary&gt; is not “0.0.0.0”, then issuing AT#DNS=... raises an error.</p> <p>Note: if &lt;primary&gt; is “0.0.0.0” we’re using the <b>primary DNS server</b> come from the network as consequence of a context activation.</p> <p>Note: if &lt;primary&gt; is not “0.0.0.0” and &lt;secondary&gt; is “0.0.0.0”, then we’re using only the <b>manual primary DNS server</b>.</p> <p>Note: the context identified by &lt;cid&gt; has to be previously defined, elsewhere issuing AT#DNS=... raises an error.</p> <p>Note: the context identified by &lt;cid&gt; has to be not activated yet, elsewhere issuing AT#DNS=... raises an error.</p>
AT#DNS?	Read command returns the manual DNS servers set either for every defined PDP context and for the single GSM context (only if defined), in the format:  [#DNS: <cid>,<primary>,<secondary>[<CR><LF> #DNS: <cid>,<primary>,<secondary>]]
AT#DNS=?	Test command reports the supported range of values for the <cid> parameter only, in the format:  #DNS: (0-5),,

### 3.5.7.8.11. DNS from Network - #NWDNS

#NWDNS – DNS from Network	SELINT 2
AT#NWDNS=[<cid>[,<cid>]	Execution command returns either the primary and secondary DNS addresses for the GSM context (if specified) and/or a list of primary and secondary DNS addresses for

#NWDNS – DNS from Network	SELINT 2
[,...]]]	<p>the specified PDP context identifiers</p> <p>Parameters:</p> <p>&lt;cid&gt; - context identifier</p> <p>0 - specifies the GSM context (see +GSMCONT).</p> <p>1..5 - numeric parameter which specifies a particular PDP context definition (see +CGDCONT command).</p> <p>Note: if no &lt;cid&gt; is specified, the DNS addresses for all <b>defined</b> contexts are returned.</p> <p>Note: issuing the command with more than 6 parameters raises an error.</p> <p>Note: the command returns only one row of information for every specified &lt;cid&gt;, even if the same &lt;cid&gt; is present more than once.</p> <p>The command returns a row of information for every specified &lt;cid&gt; whose context has been already defined. No row is returned for a &lt;cid&gt; whose context has not been defined yet. Response format is:</p> <pre>#NWDNS: &lt;cid&gt;,&lt;PDNSaddress&gt;,&lt;SDNSaddress&gt;[&lt;CR&gt;&lt;LF&gt; #NWDNS: &lt;cid&gt;,&lt;PDNSaddress&gt;,&lt;SDNSaddress&gt; [...]]</pre> <p>where:</p> <p>&lt;cid&gt; - context identifier, as before</p> <p>&lt;PDNSaddress&gt;,&lt;SDNSaddress&gt; - primary and secondary DNS addresses set through AT#DNS command. If not set, they are the primary and secondary DNS addresses assigned during the PDP(or GSM) context activation.</p>
AT#NWDNS=?	Test command returns a list of defined <cid>s.

### 3.5.7.8.12. Socket TCP Connection Time-Out - #SKTCT

#SKTCT - Socket TCP Connection Time-Out	SELINT 0 / 1
AT#SKTCT[=<tout>]	<p>Set command sets the TCP connection time-out for the first <b>CONNECT</b> answer from the TCP peer to be received.</p> <p>Parameter:</p> <p>&lt;tout&gt; - TCP first <b>CONNECT</b> answer time-out in 100ms units 10..1200 - hundreds of ms (factory default value is 600).</p> <p>Note: this time-out applies only to the time that the TCP stack waits for the <b>CONNECT</b> answer to its connection request.</p>

#SKTCT - Socket TCP Connection Time-Out		SELINT 0 / 1
	<p>Note: The time for activate the GPRS and resolving the name with the DNS query (if the peer was specified by name and not by address) is not counted in this time-out.</p> <p>Note: if parameter is omitted then the behaviour of Set command is the same as Read command.</p>	
AT#SKTCT?	Read command reports the current TCP connection time-out.	
AT#SKTCT=?	Test command returns the allowed values for parameter <tout>.	
Example	<pre>AT#SKTCT=600 OK socket first connection answer time-out has been set to 60 s.</pre>	

#SKTCT - Socket TCP Connection Time-Out		SELINT 2
AT#SKTCT=[<tout>]	<p>Set command sets the TCP connection time-out for the first <b>CONNECT</b> answer from the TCP peer to be received.</p> <p>Parameter:</p> <p>&lt;tout&gt; - TCP first <b>CONNECT</b> answer time-out in 100ms units 10..1200 - hundreds of ms (factory default value is 600).</p> <p>Note: this time-out applies only to the time that the TCP stack waits for the <b>CONNECT</b> answer to its connection request.</p> <p>Note: The time for activate the GPRS and resolving the name with the DNS query (if the peer was specified by name and not by address) is not counted in this time-out.</p> <p>Note: this command is not allowed for sockets associated to a GSM context (see <b>#SCFG</b>).</p>	
AT#SKTCT?	Read command reports the current TCP connection time-out.	
AT#SKTCT=?	Test command returns the allowed values for parameter <tout>.	
Example	<pre>AT#SKTCT=600 OK socket first connection answer time-out has been set to 60 s.</pre>	

### 3.5.7.8.13. Socket Parameters Save - #SKTSAV

#SKTSAV - Socket Parameters Save		SELINT 0 / 1
AT#SKTSAV	<p>Execution command stores the current socket parameters in the NVM of the device.</p> <p>The socket parameters to store are:</p> <ul style="list-style-type: none"> <li>- User ID</li> <li>- Password</li> <li>- Packet Size</li> <li>- Socket Inactivity Time-Out</li> <li>- Data Sending Time-Out</li> </ul>	

#SKTSAV - Socket Parameters Save		SELINT 0 / 1
	<ul style="list-style-type: none"> <li>- Socket Type (UDP/TCP)</li> <li>- Remote Port</li> <li>- Remote Address</li> <li>- TCP Connection Time-Out</li> </ul>	
Example	AT#SKTSAV OK <i>socket parameters have been saved in NVM</i>	
Note	If some parameters are not previously specified then a default value will be stored.	

#SKTSAV - Socket Parameters Save		SELINT 2
AT#SKTSAV	<p>Execution command stores the current socket parameters in the NVM of the device.</p> <p>The socket parameters to store are:</p> <ul style="list-style-type: none"> <li>- User ID</li> <li>- Password</li> <li>- Packet Size</li> <li>- Socket Inactivity Time-Out</li> <li>- Data Sending Time-Out</li> <li>- Socket Type (UDP/TCP)</li> <li>- Remote Port</li> <li>- Remote Address</li> <li>- TCP Connection Time-Out</li> </ul> <p>Note: this command is not allowed for sockets associated to a GSM context (see #SCFG).</p>	
AT#SKTSAV=?	Test command returns the <b>OK</b> result code.	
Example	AT#SKTSAV OK <i>socket parameters have been saved in NVM</i>	
Note	If some parameters have not been previously specified then a default value will be stored.	

### 3.5.7.8.14. Socket Parameters Reset - #SKTRST

#SKTRST - Socket Parameters Reset		SELINT 0 / 1
AT#SKTRST	<p>Execution command resets the socket parameters to the “factory default” configuration and stores them in the NVM of the device.</p> <p>The socket parameters to reset are:</p> <ul style="list-style-type: none"> <li>- User ID</li> <li>- Password</li> <li>- Packet Size</li> <li>- Socket Inactivity Time-Out</li> <li>- Data Sending Time-Out</li> <li>- Socket Type</li> <li>- Remote Port</li> </ul>	

#SKTRST - Socket Parameters Reset		SELINT 0 / 1
	<ul style="list-style-type: none"> <li>- Remote Address</li> <li>- TCP Connection Time-Out</li> </ul>	
Example	AT#SKTRST OK <i>socket parameters have been reset</i>	

#SKTRST - Socket Parameters Reset		SELINT 2
AT#SKTRST	<p>Execution command resets the socket parameters to the “factory default” configuration and stores them in the NVM of the device.</p> <p>The socket parameters to reset are:</p> <ul style="list-style-type: none"> <li>- User ID</li> <li>- Password</li> <li>- Packet Size</li> <li>- Socket Inactivity Time-Out</li> <li>- Data Sending Time-Out</li> <li>- Socket Type</li> <li>- Remote Port</li> <li>- Remote Address</li> <li>- TCP Connection Time-Out</li> </ul>	
AT#SKTRST=?	Test command returns the <b>OK</b> result code.	
Example	AT#SKTRST OK <i>socket parameters have been reset</i>	

### 3.5.7.8.15. GPRS Context Activation - #GPRS

#GPRS - GPRS Context Activation		SELINT 0 / 1
AT#GPRS[= <mode>]]	<p>Execution command deactivates/activates the GPRS context, eventually proceeding with the authentication with the parameters given with #PASSW and #USERID.</p> <p>Parameter:</p> <p>&lt;mode&gt; - GPRS context activation mode</p> <ul style="list-style-type: none"> <li>0 - GPRS context deactivation request</li> <li>1 - GPRS context activation request</li> </ul> <p>In the case that the GPRS context has been activated, the result code <b>OK</b> is preceded by the intermediate result code:</p> <p>+IP: &lt;ip_address_obtained&gt;</p> <p>reporting the local IP address obtained from the network.</p> <p>Note: issuing <b>AT#GPRS&lt;CR&gt;</b> reports the current status of the GPRS context, in the format:</p>	

#GPRS - GPRS Context Activation	SELINT 0 / 1
	<p><b>#GPRS: &lt;status&gt;</b></p> <p>where:  <b>&lt;status&gt;</b>          0 - GPRS context deactivated          1 - GPRS context activated          2 - GPRS context activation pending.</p> <p>Note: issuing <b>AT#GPRS=&lt;CR&gt;</b> is the same as issuing the command <b>AT#GPRS=0&lt;CR&gt;</b>.</p> <p>Note: if you request a GPRS context deactivation during a call issuing either <b>AT#GPRS=0</b> or <b>AT#EMAILACT=0</b> and then, after the call termination, you want to request a GPRS context activation through <b>#GPRS</b>, you <b>need</b> to issue the following sequence of three commands</p> <pre>AT#GPRS=1 OK AT#GPRS=0 OK AT#GPRS=1 OK</pre>
<b>AT#GPRS?</b>	Read command has the same effect as the Execution command <b>AT#GPRS&lt;CR&gt;</b> .
<b>AT#GPRS=?</b>	Test command returns the allowed values for parameter <b>&lt;mode&gt;</b> .
Example	<pre>AT#GPRS=1 +IP: 129.137.1.1 OK</pre> <p><i>Now GPRS Context has been activated and our IP is 129.137.1.1</i></p> <pre>AT#GPRS=0 OK</pre> <p><i>Now GPRS context has been deactivated, IP is lost.</i></p>
Note	It is strongly recommended to use the same command (e.g. <b>#GPRS</b> ) to activate the context, deactivate it and interrogate about its status.

#GPRS - GPRS Context Activation	SELINT 2
<b>AT#GPRS=[&lt;mode&gt;]</b>	<p>Execution command deactivates/activates the <b>PDP context #1</b>, eventually proceeding with the authentication with the parameters given with <b>#PASSW</b> and <b>#USERID</b>.</p> <p>Parameter:</p> <p><b>&lt;mode&gt;</b> - PDP context activation mode          0 - <b>PDP context #1</b> deactivation request          1 - <b>PDP context #1</b> activation request</p> <p>In the case that the <b>PDP context #1</b> has been activated, the result code <b>OK</b> is</p>

#GPRS - GPRS Context Activation	SELINT 2
	<p>preceded by the intermediate result code:</p> <p><b>+IP: &lt;ip_address_obtained&gt;</b></p> <p>reporting the local IP address obtained from the network.</p> <p>Note: at least a <b>socket identifier</b> needs to be associated with <b>PDP context #1</b> in order to every <b>#GPRS</b> action be effective; by default the <b>PDP context #1</b> is associated with <b>socket identifiers 1, 2 and 3</b>, but it is possible to modify these associations through <b>#SCFG</b>. Trying to issue a <b>#GPRS</b> action when <b>no socket identifier</b> is associated with <b>PDP context #1</b> raises an error.</p> <p>Note: if the <b>PDP context #1</b> has been activated issuing <b>AT#GPRS=1</b>, then</p> <ul style="list-style-type: none"> <li>• if you request to deactivate the <b>PDP context #1</b> issuing <b>AT#EMAILACT=0</b> an <b>ERROR</b> is raised and nothing happens</li> <li>• if you request to deactivate the <b>PDP context #1 during a call</b> issuing <b>AT#GPRS=0</b> and then, after the call termination, you want to activate the <b>PDP context #1</b> again through <b>#GPRS</b>, you <b>need</b> to issue the following sequence of three commands</li> </ul> <pre><b>AT#GPRS=1</b> <b>OK</b> <b>AT#GPRS=0</b> <b>OK</b> <b>AT#GPRS=1</b> <b>OK</b></pre> <p>(Analogous considerations if you want to request the activation of <b>PDP context #I</b> issuing <b>AT#EMAILACT=I</b>, see <b>#EMAILACT</b>)</p> <p>Note: this command is not allowed if GSM context has been activated (see <b>AT#SGACT=0,1</b>).</p>
<b>AT#GPRS?</b>	<p>Read command reports the current status of the <b>PDP context #1</b>, in the format:</p> <p><b>#GPRS: &lt;status&gt;</b></p> <p>where:</p> <p><b>&lt;status&gt;</b></p> <p>0 - <b>PDP context #1 deactivated</b>      1 - <b>PDP context #1 activated</b>      2 - <b>PDP context #1 activation pending</b>.</p>
<b>AT#GPRS=?</b>	Test command returns the allowed values for parameter <b>&lt;mode&gt;</b> .
Example	<p>AT#GPRS=1      +IP: 129.137.1.1      OK</p> <p>Now <b>PDP Context #1 has been activated and our IP is 129.137.1.1</b></p>

#GPRS - GPRS Context Activation		SELINT 2
	AT#GPRS=0 OK <i>Now PDP Context #1 has been deactivated, IP is lost.</i>	
Note	It is strongly recommended to use the same command (e.g. #GPRS) to activate the context, deactivate it and interrogate about its status.	

### 3.5.7.8.16. Socket Dial - #SKTD

#SKTD - Socket Dial		SELINT 0 / 1
AT#SKTD [=<socket type>, <remote port>, <remote addr>, [<closure type>], [<local port>]]	<p>Set command opens the socket towards the peer specified in the parameters.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;socket type&gt; - socket protocol type           <ul style="list-style-type: none"> <li>0 - TCP (factory default)</li> <li>1 - UDP</li> </ul> </li> <li>&lt;remote port&gt; - remote host port to be opened 0..65535 - port number (factory default is 0)</li> <li>&lt;remote addr&gt; - address of the remote host, string type. This parameter can be either:           <ul style="list-style-type: none"> <li>- any valid IP address in the format: xxx.xxx.xxx.xxx</li> <li>- any host name to be solved with a DNS query in the format: &lt;host name&gt; (factory default is the empty string "")</li> </ul> </li> <li>&lt;closure type&gt; - socket closure behaviour for TCP when remote host has closed           <ul style="list-style-type: none"> <li>0 - local host closes immediately (default)</li> <li>255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote.</li> </ul> </li> <li>&lt;local port&gt; - local host port to be used on UDP socket 0..65535 - port number</li> </ul> <p>Note: &lt;closure type&gt; parameter is valid only for TCP socket type, for UDP sockets shall be left unused.</p> <p>Note: &lt;local port&gt; parameter is valid only for UDP socket type, for TCP sockets shall be left unused.</p> <p>Note: the resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the #SKTD command, then an error message will be issued.</p> <p>Note: the command to be successful requests that:</p> <ul style="list-style-type: none"> <li>- the GPRS context 1 is correctly set with +CGDCONT</li> <li>- the authentication parameters are set (#USERID, #PASSW) the GPRS coverage is enough to permit a connection</li> <li>- the GPRS has been activated with AT#GPRS=1</li> </ul> <p>Note: If all parameters are omitted then the behaviour of Set command is the same</p>	

#SKTD - Socket Dial		SELINT 0 / 1
	as Read command.	
AT#SKTD?	Read command reports the socket dial parameters values, in the format:  <b>AT#SKTD: &lt;socket type&gt;,&lt;remote port&gt;,&lt;remote addr&gt;,&lt;closure type&gt;,&lt;local port&gt;</b>	
AT#SKTD=?	Test command returns the allowed values for the parameters.	
Example	AT#SKTD=0,1024,"123.255.020.001",255 CONNECT  AT#SKTD=1,1024,"123.255.020.001",,1025 CONNECT <i>In this way my local port 1025 is opened to the remote port 1024</i>  AT#SKTD=0,1024,"www.telit.net", 255 CONNECT	
Note	The main difference between this command and #SKTOP is that this command does not interact with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the <b>#GPRS</b> setting, therefore when the connection made with <b>AT#SKTD</b> is closed the context (and hence the local IP address) is maintained.	

#SKTD - Socket Dial		SELINT 2
AT#SKTD= [<socket type>,<remote port>,<remote addr>,<closure type>], [<local port>]]	Set command opens the socket towards the peer specified in the parameters.  Parameters: <b>&lt;socket type&gt;</b> - socket protocol type 0 - TCP (factory default) 1 - UDP <b>&lt;remote port&gt;</b> - remote host port to be opened 1..65535 - port number <b>&lt;remote addr&gt;</b> - address of the remote host, string type. This parameter can be either: - any valid IP address in the format: xxx.xxx.xxx.xxx - any host name to be solved with a DNS query in the format: <b>&lt;host name&gt;</b> (factory default is the empty string "") <b>&lt;closure type&gt;</b> - socket closure behaviour for TCP when remote host has closed 0 - local host closes immediately (default) 255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote. <b>&lt;local port&gt;</b> - local host port to be used on UDP socket 0..65535 - port number	

Note: **<closure type>** parameter is valid only for TCP socket type, for UDP sockets shall be left unused.

Note: **<local port>** parameter is valid only for UDP socket type, for TCP sockets shall be left unused.

#SKTD - Socket Dial	SELINT 2
	<p>Note: the resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the <b>#SKTD</b> command, then an error message will be issued.</p> <p>Note: the command to be successful requests that:</p> <ul style="list-style-type: none"> <li>- the GPRS context 1 is correctly set with <b>+CGDCONT</b></li> <li>- the authentication parameters are set (<b>#USERID</b>, <b>#PASSW</b>) the GPRS coverage is enough to permit a connection</li> <li>- the GPRS has been activated with <b>AT#GPRS=1</b></li> </ul> <p>Note: this command is not allowed for sockets associated to a GSM context (see <b>#SCFG</b>).</p>
<b>AT#SKTD?</b>	Read command reports the socket dial parameters values, in the format:  <b>AT#SKTD: &lt;socket type&gt;,&lt;remote port&gt;,&lt;remote addr&gt;,&lt;closure type&gt;,&lt;local port&gt;</b>
<b>AT#SKTD=?</b>	Test command returns the allowed values for the parameters.
Example	<pre>AT#SKTD=0,1024,"123.255.020.001",255 CONNECT  AT#SKTD=1,1024,"123.255.020.001",,1025 CONNECT <i>In this way my local port 1025 is opened to the remote port 1024</i>  AT#SKTD=0,1024,"www.telit.net", 255 CONNECT</pre>
Note	The main difference between this command and <b>#SKTOP</b> is that this command does not interact with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the <b>#GPRS</b> setting, therefore when the connection made with <b>#SKTD</b> is closed the context (and hence the local IP address) is maintained.

### 3.5.7.8.17. Socket Listen - #SKTL

#SKTL - Socket Listen	SELINT 0 / 1
<b>AT#SKTL</b> $[=<\text{mode}>, <\text{socket type}>, <\text{input port}>, [<\text{closure type}>]]$	<p>Execution command opens/closes the socket listening for connection requests.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;<b>mode</b>&gt; - socket mode             <ul style="list-style-type: none"> <li>0 - closes socket listening</li> <li>1 - starts socket listening</li> </ul> </li> <li>&lt;<b>socket type</b>&gt; - socket protocol type             <ul style="list-style-type: none"> <li>0 - TCP</li> </ul> </li> <li>&lt;<b>input port</b>&gt; - local host input port to be listened             <ul style="list-style-type: none"> <li>0..65535 - port number</li> </ul> </li> <li>&lt;<b>closure type</b>&gt; - socket closure behaviour for TCP when remote host has closed</li> </ul>

#SKTL - Socket Listen	SELINT 0 / 1
	<p>0 - local host closes immediately (default)      255 - local host closes after an escape sequence (+++) or immediately in case of an abortive disconnect from remote.</p> <p>Command returns the <b>OK</b> result code if successful.</p> <p>Note: the command to be successful requests that:</p> <ul style="list-style-type: none"> <li>- the GPRS context 1 is correctly set with <b>+CGDCONT</b></li> <li>- the authentication parameters are set (<b>#USERID</b>, <b>#PASSW</b>)</li> <li>- the GPRS coverage is enough to permit a connection</li> <li>- the GPRS has been activated with <b>AT#GPRS=1</b></li> </ul> <p>When a connection request comes on the input port, if the sender is not filtered by the internal firewall (see command <b>#FRWL</b>), an unsolicited code is reported:</p> <p><b>+CONN FROM: &lt;remote addr&gt;</b></p> <p>Where:  <b>&lt;remote addr&gt;</b> - host address of the remote machine that contacted the device.</p> <p>When the connection is established the <b>CONNECT</b> indication is given and the modem goes into data transfer mode.</p> <p>On connection close or when context is closed with <b>#GPRS=0</b> the socket is closed and no listen is anymore active.</p> <p>If the context is closed by the network while in listening, the socket is closed, no listen is anymore active and an unsolicited code is reported:</p> <p><b>#SKTL: ABORTED</b></p> <p>Note: if all parameters are omitted the command returns the current socket listening <b>status</b> and the last settings of parameters <b>&lt;input port&gt;</b> and <b>&lt;closure type&gt;</b>, in the format:</p> <p><b>#SKTL: &lt;status&gt;,&lt;input port&gt;,&lt;closure type&gt;</b></p> <p>where</p> <p><b>&lt;status&gt;</b> - socket listening status      0 - socket not listening      1 - socket listening</p>
<b>AT#SKTL?</b>	Read command has the same effect as Execution command when parameters are omitted.
<b>AT#SKTL=?</b>	Test command returns the allowed values for parameters <b>&lt;mode&gt;</b> , <b>&lt;input port&gt;</b> and <b>&lt;closure type&gt;</b> .
Example	<i>Activate GPRS</i> <b>AT#GPRS=1</b> <b>+IP: ###.###.###.###</b>

#SKTL - Socket Listen		SELINT 0 / 1
	<p>OK  <i>Start listening</i>          AT#SKTL=1,0,1024          OK          or          AT#SKTL=1,0,1024,255          OK</p> <p><i>Receive connection requests</i>          +CONN FROM: 192.164.2.1          CONNECT</p> <p><i>exchange data with the remote host</i></p> <p><i>send escape sequence</i>          +++          NO CARRIER</p> <p><i>Now listen is not anymore active</i></p> <p><i>to stop listening</i>          AT#SKTL=0,0,1024, 255          OK</p>	
Note	<p>The main difference between this command and the #SKTD is that #SKTL does not contact any peer, nor does any interaction with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the #GPRS setting, therefore when the connection made with #SKTL is closed the context (and hence the local IP address) is maintained.</p> <p>The improving command @SKTL has been defined.</p>	SELINT 2

#SKTL - Socket Listen		SELINT 2
AT#SKTL =[<mode>, <socket type>, <input port>, [<closure type>]]	<p>Execution command opens/closes the socket listening for connection requests.</p> <p>Parameters:</p> <p>&lt;mode&gt; - socket mode          0 - closes socket listening          1 - starts socket listening</p> <p>&lt;socket type&gt; - socket protocol type          0 -TCP (default)          1- UDP</p> <p>&lt;input port&gt; - local host input port to be listened          1..65535 - port number</p> <p>&lt;closure type&gt; - socket closure behaviour for TCP when remote host has closed          0 - local host closes immediately (default)          255 - local host closes after an escape sequence (++) or immediately in case of an abortive disconnect from remote.</p> <p>Command returns the <b>OK</b> result code if successful.</p>	

#SKTL - Socket Listen	SELINT 2
	<p>Note: the command to be successful requests that:</p> <ul style="list-style-type: none"> <li>- the GPRS context 1 is correctly set with <b>+CGDCONT</b></li> <li>- the authentication parameters are set (<b>#USERID</b>, <b>#PASSW</b>)</li> <li>- the GPRS coverage is enough to permit a connection</li> <li>- the GPRS has been activated with <b>AT#GPRS=1</b></li> </ul> <p>When a connection request comes on the input port, if the sender is not filtered by the internal firewall (see command <b>#FRWL</b>), an unsolicited code is reported:</p> <p><b>+CONN FROM: &lt;remote addr&gt;</b></p> <p>Where:  <b>&lt;remote addr&gt;</b> - host address of the remote machine that contacted the device.</p> <p>When the connection is established the <b>CONNECT</b> indication is given and the modem goes into data transfer mode.</p> <p>On connection close or when context is closed with <b>#GPRS=0</b> the socket is closed and no listen is anymore active.</p> <p>If the context is closed by the network while in listening, the socket is closed, no listen is anymore active and an unsolicited code is reported:</p> <p><b>#SKTL: ABORTED</b></p> <p>Note: when closing the listening socket <b>&lt;input port&gt;</b> is a don't care parameter</p>
<b>AT#SKTL?</b>	<p>Read command returns the current socket listening <b>status</b> and the last settings of parameters <b>&lt;input port&gt;</b> and <b>&lt;closure type&gt;</b>, in the format:</p> <p><b>#SKTL: &lt;status&gt;,&lt;socket type&gt;,&lt;input port&gt;,&lt;closure type&gt;</b></p> <p>Where</p> <p><b>&lt;status&gt;</b> - socket listening status      0 - socket not listening      1 - socket listening</p>
<b>AT#SKTL=?</b>	<p>Test command returns the allowed values for parameters <b>&lt;mode&gt;</b>, <b>&lt;socket type&gt;</b>, <b>&lt;input port&gt;</b> and <b>&lt;closure type&gt;</b>.</p>
Example	<p>Activate GPRS      AT#GPRS=1      +IP: ####.####.####.####</p> <p>OK</p> <p>Start TCP listening      AT#SKTL=1,0,1024</p>

#SKTL - Socket Listen		SELINT 2
	<p>OK or AT#SKTL=1,0,1024,255 OK</p> <p><i>Receive TCP connection requests</i> +CONN FROM: 192.164.2.1 CONNECT</p> <p><i>exchange data with the remote host</i></p> <p><i>send escape sequence</i> +++ NO CARRIER</p> <p><i>Now listen is not anymore active</i></p> <p><i>to stop listening</i> AT#SKTL=0,0,1024, 255 OK</p>	
Note	<p>The main difference between this command and #SKTD is that #SKTL does not contact any peer, nor does any interaction with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the <b>#GPRS</b> setting, therefore when the connection made with #SKTL is closed the context (and hence the local IP address) is maintained.</p>	

### 3.5.7.8.18. Socket Listen Improved - @SKTL

@SKTL - Socket Listen Improved	SELINT 0 / 1
<p><b>AT@SKTL</b> [=&lt;mode&gt;, &lt;socket type&gt;, &lt;input port&gt;, [&lt;closure type&gt;]]</p>	<p>Execution command opens/closes the socket listening for connection requests.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;<b>mode</b>&gt; - socket mode           <ul style="list-style-type: none"> <li>0 - closes socket listening</li> <li>1 - starts socket listening</li> </ul> </li> <li>&lt;<b>socket type</b>&gt; - socket protocol type           <ul style="list-style-type: none"> <li>0 - TCP</li> </ul> </li> <li>&lt;<b>input port</b>&gt; - local host input port to be listened           <ul style="list-style-type: none"> <li>0..65535 - port number</li> </ul> </li> <li>&lt;<b>closure type</b>&gt; - socket closure behaviour for TCP when remote host has closed           <ul style="list-style-type: none"> <li>0 - local host closes immediately (default)</li> <li>255 - local host closes after an escape sequence (++) or immediately in case of an abortive disconnect from remote.</li> </ul> </li> </ul> <p>Command returns the <b>OK</b> result code if successful.</p> <p>Note: the command to be successful requests that:</p> <ul style="list-style-type: none"> <li>- the GPRS context 1 is correctly set with <b>+CGDCONT</b></li> <li>- the authentication parameters are set (<b>#USERID</b>, <b>#PASSW</b>)</li> </ul>

@SKTL - Socket Listen Improved		SELINT 0 / 1
	<ul style="list-style-type: none"> <li>- the GPRS coverage is enough to permit a connection</li> <li>- the GPRS has been activated with <b>AT#GPRS=1</b></li> </ul>	
	<p>When a connection request comes on the input port, if the sender is not filtered by the internal firewall (see command <b>#FRWL</b>), an unsolicited code is reported:</p> <p><b>+CONN FROM: &lt;remote addr&gt;</b></p> <p>Where:  <b>&lt;remote addr&gt;</b> - host address of the remote machine that contacted the device.</p>	
	<p>When the connection is established the <b>CONNECT</b> indication is given and the modem goes into data transfer mode.</p> <p>On connection close or when context is closed with <b>#GPRS=0</b> the socket is closed and no listen is anymore active.</p> <p>If the context is closed by the network while in listening, the socket is closed, no listen is anymore active and an unsolicited code is reported:</p> <p><b>@SKTL: ABORTED</b></p>	
	<p>Note: if all parameters are omitted the command returns the current socket listening <b>status</b> and the last settings of parameters <b>&lt;socket type&gt;</b>, <b>&lt;input port&gt;</b> and <b>&lt;closure type&gt;</b>, in the format:</p> <p><b>@SKTL: &lt;status&gt;,&lt;socket type&gt;,&lt;input port&gt;,&lt;closure type&gt;</b></p> <p>Where  <b>&lt;status&gt;</b> - socket listening status  0 - socket not listening  1 - socket listening</p>	
<b>AT@SKTL?</b>	Read command has the same effect as Execution command when parameters are omitted.	
<b>AT@SKTL=?</b>	Test command returns the allowed values for parameters <b>&lt;mode&gt;</b> , <b>&lt;socket type&gt;</b> , <b>&lt;input port&gt;</b> and <b>&lt;closure type&gt;</b> .	
Example	<p>Activate GPRS</p> <p>AT#GPRS=1</p> <p>+IP: ####.####.####.####</p> <p>OK</p> <p><i>Start listening</i></p> <p>AT@SKTL=1,0,1024</p> <p>OK</p> <p>or</p> <p>AT@SKTL=1,0,1024,255</p> <p>OK</p>	

@SKTL - Socket Listen Improved		SELINT 0 / 1
	<p><i>Receive connection requests</i>  +CONN FROM: 192.164.2.1  CONNECT</p> <p><i>exchange data with the remote host</i></p> <p><i>send escape sequence</i>  +++  NO CARRIER</p> <p><i>Now listen is not anymore active</i></p> <p><i>to stop listening</i>  AT@SKTL=0,0,1024, 255  OK</p>	
Note	The main difference between this command and the #SKTD is that @SKTL does not contact any peer, nor does any interaction with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the #GPRS setting, therefore when the connection made with @SKTL is closed the context (and hence the local IP address) is maintained.	

### 3.5.7.8.19.      Socket Listen Ring Indicator - #E2SLRI

#E2SLRI - Socket Listen Ring Indicator		SELINT 0 / 1 / 2
AT#E2SLRI=[<n>]	Set command enables/disables the Ring Indicator pin response to a Socket Listen connect and, if enabled, the duration of the negative going pulse generated on receipt of connect.  Parameter: <n> - <b>RI</b> enabling 0 - <b>RI</b> disabled for Socket Listen connect (factory default) 50..1150 - <b>RI</b> enabled for Socket Listen connect; a negative going pulse is generated on receipt of connect and <n> is the duration in ms of this pulse.	
AT#E2SLRI?	Read command reports whether the Ring Indicator pin response to a Socket Listen connect is currently enabled or not, in the format:	
	#E2SLRI: <n>	
AT#E2SLRI=?	Test command returns the allowed values for parameter <status>.	

### 3.5.7.8.20.      Firewall Setup - #FRWL

#FRWL - Firewall Setup		SELINT 0 / 1
AT#FRWL=[<action>, <ip_addr>, <net_mask>]	Execution command controls the internal firewall settings.  Parameters: <action> - command action	

#FRWL - Firewall Setup	SELINT 0 / 1
	<p>0 - remove selected chain      1 - add an <b>ACCEPT</b> chain      2 - remove all chains (<b>DROP</b> everything); &lt;ip_addr&gt; and &lt;net_mask&gt; has no meaning in this case.  <b>&lt;ip_addr&gt;</b> - remote address to be added into the <b>ACCEPT</b> chain; string type, it can be any valid IP address in the format: xxx.xxx.xxx.xxx  <b>&lt;net_mask&gt;</b> - mask to be applied on the <b>&lt;ip_addr&gt;</b>; string type, it can be any valid IP address mask in the format: xxx.xxx.xxx.xxx</p> <p>Command returns <b>OK</b> result code if successful.</p> <p>Note: the firewall applies for incoming (listening) connections only.</p> <p>Firewall general policy is <b>DROP</b>, therefore all packets that are not included into an <b>ACCEPT</b> chain rule will be silently discarded.</p> <p>When a packet comes from the IP address <b>incoming_IP</b>, the firewall chain rules will be scanned for matching with the following criteria:</p> <p><b>incoming_IP &amp; &lt;net_mask&gt; = &lt;ip_addr&gt; &amp; &lt;net_mask&gt;</b></p> <p>If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.</p> <p>Note: If all parameters are omitted the command reports the list of all <b>ACCEPT</b> chain rules registered in the Firewall settings in the format:</p> <p><b>#FRWL: &lt;ip_addr&gt;,&lt;net_mask&gt;</b>  <b>#FRWL: &lt;ip_addr&gt;,&lt;net_mask&gt;</b>      ....  <b>OK</b></p>
<b>AT#FRWL?</b>	Read command has the same effect as Execution command when parameters are omitted.
<b>AT#FRWL=?</b>	Test command returns the allowed values for parameter <b>&lt;action&gt;</b> .
Example	<p><i>Let assume we want to accept connections only from our devices which are on the IP addresses ranging from 197.158.1.1 to 197.158.255.255</i></p> <p><i>We need to add the following chain to the firewall:</i>  <b>AT#FRWL=1,"197.158.1.1","255.255.0.0"</b>  <b>OK</b></p>
Note	<p>For outgoing connections made with <b>#SKTOP</b> and <b>#SKTD</b> the remote host is dynamically inserted into the <b>ACCEPT</b> chain for all the connection duration. Therefore the <b>#FRWL</b> command shall be used only for defining either the <b>#SKTL</b> or the <b>@SKTL</b> behaviour, deciding which hosts are allowed to connect to the local device.</p> <p>Rules are not saved in NVM, at startup the rules list will be empty.</p>

#FRWL - Firewall Setup	SELINT 2
<b>AT#FRWL=</b> <b>[&lt;action&gt;, &lt;ip_address&gt;, &lt;net mask&gt;]</b>	<p>Execution command controls the internal firewall settings.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;action&gt; - command action</li> <li>0 - remove selected chain</li> <li>1 - add an <b>ACCEPT</b> chain</li> <li>2 - remove all chains (<b>DROP</b> everything); &lt;ip_addr&gt; and &lt;net_mask&gt; has no meaning in this case.</li> </ul> <p>&lt;ip_addr&gt; - remote address to be added into the <b>ACCEPT</b> chain; string type, it can be any valid IP address in the format: xxx.xxx.xxx.xxx</p> <p>&lt;net_mask&gt; - mask to be applied on the &lt;ip_addr&gt;; string type, it can be any valid IP address mask in the format: xxx.xxx.xxx.xxx</p> <p>Command returns <b>OK</b> result code if successful.</p> <p>Note: the firewall applies for incoming (listening) connections only.</p> <p>Firewall general policy is <b>DROP</b>, therefore all packets that are not included into an <b>ACCEPT</b> chain rule will be silently discarded.</p> <p>When a packet comes from the IP address <b>incoming_IP</b>, the firewall chain rules will be scanned for matching with the following criteria:</p> <p><b>incoming_IP &amp; &lt;net_mask&gt; = &lt;ip_addr&gt; &amp; &lt;net_mask&gt;</b></p> <p>If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.</p>
<b>AT#FRWL?</b>	Read command reports the list of all <b>ACCEPT</b> chain rules registered in the Firewall settings in the format:  <b>#FRWL: &lt;ip_addr&gt;,&lt;net_mask&gt;</b> <b>#FRWL: &lt;ip_addr&gt;,&lt;net_mask&gt;</b> <b>....</b> <b>OK</b>
<b>AT#FRWL=?</b>	Test command returns the allowed values for parameter <b>&lt;action&gt;</b> .
Example	<p><i>Let assume we want to accept connections only from our devices which are on the IP addresses ranging from 197.158.1.1 to 197.158.255.255</i></p> <p><i>We need to add the following chain to the firewall:</i></p> <p>AT#FRWL=1,"197.158.1.1","255.255.0.0"  OK</p>
Note	For outgoing connections made with <b>#SKTOP</b> and <b>#SKTD</b> the remote host is dynamically inserted into the <b>ACCEPT</b> chain for all the connection duration. Therefore the <b>#FRWL</b> command shall be used only for defining the <b>#SKTL</b> behaviour, deciding which hosts are allowed to connect to the local device.

<b>#FRWL - Firewall Setup</b>	<b>SELINT 2</b>
Rules are not saved in NVM, at startup the rules list will be empty.	

### 3.5.7.8.21. Firewall Setup for IPV6 addresses - #FRWLIPV6

<b>#FRWLIPV6 - Firewall Setup for IPV6 addresses</b>	<b>SELINT 2</b>
<b>AT#FRWLIPV6=</b> [<action>, <ip_address>, <net mask>]	<p>Execution command controls the internal firewall settings for IPV6 addresses.</p> <p>Parameters:</p> <p>&lt;action&gt; - command action</p> <p>0 - remove selected chain</p> <p>1 - add an <b>ACCEPT</b> chain</p> <p>2 - remove all chains (<b>DROP</b> everything); &lt;ip_addr&gt; and &lt;net_mask&gt; has no meaning in this case.</p> <p>&lt;ip_addr&gt; - remote address to be added into the <b>ACCEPT</b> chain; string type, it can be any valid IP address in the format XXX.XXX.XXX.XXX.  XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX or in the format yyyy:yyyy:yyyy:yyyy:yyyy:  yyyy:yyyy:yyyy</p> <p>&lt;net_mask&gt; - mask to be applied on the &lt;ip_addr&gt;; string type, it can be any valid IP address mask in the format XXX.XXX.XXX.XXX.  XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX or in the format yyyy:yyyy:yyyy:yyyy:yyyy:  yyyy:yyyy:yyyy</p> <p>Command returns <b>OK</b> result code if successful.</p> <p>Note: the firewall applies for incoming (listening) connections only.</p> <p>Firewall general policy is <b>DROP</b>, therefore all packets that are not included into an <b>ACCEPT</b> chain rule will be silently discarded.</p> <p>When a packet comes from the IP address <b>incoming_IP</b>, the firewall chain rules will be scanned for matching with the following criteria:</p> <p><b>incoming_IP &amp; &lt;net_mask&gt; = &lt;ip_addr&gt; &amp; &lt;net_mask&gt;</b></p> <p>If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.</p>
<b>AT#FRWLIPV6?</b>	Read command reports the list of all <b>ACCEPT</b> chain rules registered in the Firewall settings in the format:

	#FRWLIPV6: <ip_addr>,<net_mask> #FRWLIPV6: <ip_addr>,<net_mask> .... OK
AT#FRWLIPV6=?	Test command returns the allowed values for parameter <action>.

### 3.5.7.8.22. GPRS Data Volume - #GDATAVOL

#GDATAVOL - GPRS Data Volume		SELINT 2
AT#GDATAVOL=[<mode>]	<p>Execution command reports, for every active PDP context, the amount of data the last GPRS session (and the last GSM session, if GSM context is active) received and transmitted, or it will report the total amount of data received and transmitted during all past GPRS (and GSM) sessions, since last reset.</p> <p>Parameter:  <b>&lt;mode&gt;</b></p> <p>0 - it resets the GPRS data counter for the all the available PDP contexts (1-5) and GSM data counter for GSM context 0</p> <p>1 - it reports the last GPRS session data counter for the all the set PDP contexts (i.e. all the PDP contexts with APN parameter set using +CGDCONT) (and the last GSM session data counter for the GSM context, if set through #GSMCONT), in the format:</p> <pre>#GDATAVOL: &lt;cidn&gt;,&lt;totn&gt;,&lt;sentr&gt;,&lt;receivedn&gt;[&lt;CR&gt;&lt;LF&gt; #GDATAVOL: &lt;cidm&gt;,&lt;totm&gt;,&lt;sentm&gt;,&lt;receivedm&gt;[...]]</pre> <p>where:</p> <p>&lt;cidn&gt; - PDP context identifier      0 - specifies the GSM context      1..5 - numeric parameter which specifies a particular PDP context definition</p> <p>&lt;totn&gt; - number of bytes either received or transmitted in the last GPRS (or GSM) session for &lt;cidn&gt; PDP context;</p> <p>&lt;sentr&gt; - number of bytes transmitted in the last GPRS (or GSM) session for &lt;cidn&gt; PDP context;</p> <p>&lt;receivedn&gt; - number of bytes received in the last GPRS (or GSM) session for &lt;cidn&gt; PDP context;</p> <p>2 - it reports the total GPRS data counter, since last reset, for the all the set PDP contexts (i.e. all the PDP context with APN parameter set using +CGDCONT) and the total GSM data counter for the GSM context, if set through #GSMCONT, in the format:</p> <pre>#GDATAVOL: &lt;cidn&gt;,&lt;totn&gt;,&lt;sentr&gt;,&lt;receivedn&gt;[&lt;CR&gt;&lt;LF&gt; #GDATAVOL: &lt;cidm&gt;,&lt;totm&gt;,&lt;sentm&gt;,&lt;receivedm&gt;[...]]</pre> <p>where:</p> <p>&lt;cidn&gt; - PDP context identifier      0 - specifies the GSM context</p>	

#GDATAVOL - GPRS Data Volume	SELINT 2
	<p>1..5 - numeric parameter which specifies a particular PDP context definition</p> <p>&lt;totn&gt; - number of bytes either received or transmitted, in every GPRS (or GSM) session since last reset, for &lt;cidn&gt; PDP context;</p> <p>&lt;sentn&gt; - number of bytes transmitted, in every GPRS (or GSM) session since last reset, for &lt;cidn&gt; PDP context;</p> <p>&lt;receivedn&gt; - number of bytes received, in every GPRS (or GSM) session since last reset, for &lt;cidn&gt; PDP context;</p> <p>Note: last GPRS and GSM session counters are not saved in NVM so they are loosen at power off.</p> <p>Note: total GPRS and GSM session counters are saved on NVM.</p>
AT#GDATAVOL=?	Test command returns the range of supported values for parameter <mode>.

### 3.5.7.8.23. ICMP Ping Support - #ICMP

#ICMP - ICMP Ping Support	SELINT 2
AT#ICMP=<mode>	<p>Set command enables/disables the ICMP Ping support.</p> <p>Parameter:</p> <p>&lt;mode&gt;</p> <p>0 - disable ICMP Ping support (default)</p> <p>1 - enable firewalled ICMP Ping support: the module is sending a proper ECHO_REPLY only to a subset of IP Addresses pinging it; this subset of IP Addresses has been previously specified through #FRWL (see)</p> <p>2 - enable free ICMP Ping support; the module is sending a proper ECHO_REPLY to every IP Address pinging it.</p>
AT#ICMP?	Read command returns whether the ICMP Ping support is currently enabled or not, in the format:  #ICMP: <mode>
AT#ICMP=?	Test command reports the supported range of values for the <mode> parameter.

### 3.5.7.8.24. Maximum TCP Payload Size - #TCPMAXDAT

#TCPMAXDAT - Maximum TCP Payload Size	SELINT 2
AT#TCPMAXDAT=<size>	<p>Set command allows to set the maximum TCP payload size in TCP header options.</p> <p>Parameter:</p> <p>&lt;size&gt; - maximum TCP payload size accepted in one single TCP/IP datagram; it is sent in TCP header options in SYN packet.</p> <p>0 - the maximum TCP payload size is automatically handled by module (default).</p> <p>496..1420 - maximum TCP payload size</p>

#TCPMAXDAT - Maximum TCP Payload Size	SELINT 2
AT#TCPMAXDAT?	Read command reports the current maximum TCP payload size, in the format: <b>#TCPMAXDAT: &lt;size&gt;</b>
AT#TCPMAXDAT=?	Test command reports the supported range of values for parameter <b>&lt;size&gt;</b>

### 3.5.7.8.25. TCP Reassembly - #TCPREASS

#TCPREASS - TCP Reassembly	SELINT 2
AT#TCPREASS=<n>	Set command enables/disables the <b>TCP reassembly feature</b> , in order to handle fragmented TCP packets.  Parameter: <b>&lt;n&gt;</b> 0 - disable TCP reassembly feature (default) 1 - enable TCP reassembly feature
AT#TCPREASS?	Read command returns whether the TCP reassembly feature is enabled or not, in the format: <b>#TCPREASS: &lt;n&gt;</b>
AT#TCPREASS=?	Test command returns the supported range of values for parameter <b>&lt;n&gt;</b> .

### 3.5.7.8.26. PING request - #PING

#PING – Send PING request	
AT#PING=<IPAddr>[,<retryNum>[,<len>[,<timeout>[,<ttl>]]]]	This command is used to send Ping Echo Request messages and to receive the corresponding Echo Reply.  Parameters: <b>&lt;IPAddr&gt;</b> - address of the remote host, string type. This parameter can be either: - any valid IP address in the format: “xxx.xxx.xxx.xxx” - any host name to be solved with a DNS query <b>&lt;retryNum&gt;</b> - the number of Ping Echo Request to send 1-64 (default 4) <b>&lt;len&gt;</b> - the lenght of Ping Echo Request message 32-1460 (default 32) <b>&lt;timeout&gt;</b> - the timeout, in 100 ms units, waiting a single Echo Reply 1-600 (default 50) <b>&lt;ttl&gt;</b> - time to live 1-255 (default 128)

#PING – Send PING request	
	<p>Once the single Echo Reply message is received a string like that is displayed:</p> <p><b>#PING: &lt;replyId&gt;,&lt;Ip Address&gt;,&lt;replyTime&gt;,&lt;ttl&gt;</b></p> <p>Where:</p> <ul style="list-style-type: none"> <li>&lt;replyId&gt; - Echo Reply number</li> <li>&lt;Ip Address&gt; - IP address of the remote host</li> <li>&lt;replyTime&gt; - time, in 100 ms units, required to receive the response</li> <li>&lt;ttl&gt; - time to live of the Echo Reply message</li> </ul> <p>Note1: when the Echo Request timeout expires (no reply received on time) the response will contain &lt;replyTime&gt; set to 600 and &lt;ttl&gt; set to 255</p> <p>Note2: To receive the corresponding Echo Reply is not required to enable separately AT#ICMP</p> <p>Note3: Before send PING Request the GPRS context must have been activated by AT#SGACT=1,1</p>
AT#ICMP=?	Test command reports the supported range of values for the #PING command parameters.
Example	<pre>AT#PING="www.telit.com" #PING: 01,"81.201.117.177",6,50 #PING: 02,"81.201.117.177",5,50 #PING: 03,"81.201.117.177",6,50 #PING: 04,"81.201.117.177",5,50  OK</pre>

### 3.5.7.9. E-mail Management AT Commands

#### 3.5.7.9.1. E-mail SMTP Server - #ESMTP

#ESMTP - E-mail SMTP Server		SELINT 0 / 1
AT#ESMTP [=<smtp>]	<p>Set command sets the SMTP server address, used for E-mail sending. SMTP server can be specified as IP address or as nick name.</p> <p>Parameter:</p> <p>&lt;smtp&gt; - SMTP server address, string type. This parameter can be either:</p> <ul style="list-style-type: none"> <li>- any valid IP address in the format: xxx.xxx.xxx.xxx</li> <li>- any host name to be solved with a DNS query in the format: &lt;host name&gt; (factory default is the empty string "")</li> </ul> <p>Note: the max length for &lt;smtp&gt; is the output of Test command.</p> <p>Note: If parameter is omitted then the behaviour of Set command is the same of</p>	

#ESMTP - E-mail SMTP Server		SELINT 0 / 1
	Read command	
<b>AT#ESMTP?</b>	Read Command reports the current SMTP server address, in the format:  <b>#ESMTP: &lt;smtp&gt;</b>	
<b>AT#ESMTP=?</b>	Test command returns the max length for the parameter <b>&lt;smtp&gt;</b> .	
Example	AT#ESMTP="smtp.mydomain.com" OK	
Note	The SMTP server used shall be inside the APN space (the smtp server provided by the network operator) or it must allow the Relay, otherwise it will refuse to send the e-mail.	

#ESMTP - E-mail SMTP Server		SELINT 2
<b>AT#ESMTP= [&lt;smtp&gt;]</b>	Set command sets the SMTP server address, used for E-mail sending. SMTP server can be specified as IP address or as nick name.  Parameter: <b>&lt;smtp&gt;</b> - SMTP server address, string type. This parameter can be either: - any valid IP address in the format: xxx.xxx.xxx.xxx - any host name to be solved with a DNS query in the format: <b>&lt;host name&gt;</b> (factory default is the empty string "")	
	Note: the max length for <b>&lt;smtp&gt;</b> is the output of Test command.	
<b>AT#ESMTP?</b>	Read Command reports the current SMTP server address, in the format:  <b>#ESMTP: &lt;smtp&gt;</b>	
<b>AT#ESMTP=?</b>	Test command returns the max length for the parameter <b>&lt;smtp&gt;</b> .	
Example	AT#ESMTP="smtp.mydomain.com" OK	
Note	The SMTP server used shall be inside the APN space (the smtp server provided by the network operator) or it must allow the Relay, otherwise it will refuse to send the e-mail.	

### 3.5.7.9.2. E-mail Sender Address - #EADDR

#EADDR - E-mail Sender Address		SELINT 0 / 1
<b>AT#EADDR [=&lt;e-addr&gt;]</b>	Set command sets the sender address string to be used for sending the e-mail.  Parameter: <b>&lt;e-addr&gt;</b> - sender address, string type. - any string value up to max length reported in the Test command. (factory default is the empty string "")	
	Note: If parameter is omitted then the behaviour of Set command is the same of Read command	
<b>AT#EADDR?</b>	Read command reports the current sender address, in the format:	

#EADDR - E-mail Sender Address		SELINT 0 / 1
#EADDR: <e-addr>		
AT#EADDR=?	Test command returns the maximum allowed length of the string parameter <e-addr>.	
Example	AT#EADDR="me@email.box.com" OK AT#EADDR? #EADDR: "me@email.box.com" OK	

#EADDR - E-mail Sender Address		SELINT 2
AT#EADDR= [<e-add>]	Set command sets the sender address string to be used for sending the e-mail.  Parameter: <e-addr> - sender address, string type. - any string value up to max length reported in the Test command. (factory default is the empty string "")	
AT#EADDR?	Read command reports the current sender address, in the format:	
	#EADDR: <e-addr>	
AT#EADDR=?	Test command returns the maximum allowed length of the string parameter <e-addr>.	
Example	AT#EADDR="me@email.box.com" OK AT#EADDR? #EADDR: "me@email.box.com" OK	

### 3.5.7.9.3. E-mail Authentication User Name - #EUSER

#EUSER - E-mail Authentication User Name		SELINT 0 / 1
AT#EUSER [=<e-user>]	Set command sets the user identification string to be used during the authentication step of the SMTP.  Parameter: <e-user> - e-mail authentication User ID, string type. - any string value up to max length reported in the Test command. (factory default is the empty string "")	
	Note: if no authentication is required then the <e-user> parameter shall be empty "".	
	Note: If parameter is omitted then the behaviour of Set command is the same of Read command	
AT#EUSER?	Read command reports the current user identification string, in the format:	
	#EUSER: <e-user>	

<b>#EUSER - E-mail Authentication User Name</b>		<b>SELINT 0 / 1</b>
<b>AT#EUSER=?</b>	Test command returns the maximum allowed length of the string parameter <e-user>.	
Example	AT#EUSER="myE-Name" OK AT#EUSER? #EUSER: "myE-Name" OK	
Note	It is a different user field than the one used for GPRS authentication (see #USERID).	

<b>#EUSER - E-mail Authentication User Name</b>		<b>SELINT 2</b>
<b>AT#EUSER= [&lt;e-user&gt;]</b>	Set command sets the user identification string to be used during the authentication step of the SMTP.  Parameter: <e-user> - e-mail authentication User ID, string type. - any string value up to max length reported in the Test command. (factory default is the empty string "")  Note: if no authentication is required then the <e-user> parameter shall be empty "".	
<b>AT#EUSER?</b>	Read command reports the current user identification string, in the format:  <b>#EUSER: &lt;e-user&gt;</b>	
<b>AT#EUSER=?</b>	Test command returns the maximum allowed length of the string parameter <e-user>.	
Example	AT#EUSER="myE-Name" OK AT#EUSER? #EUSER: "myE-Name" OK	
Note	It is a different user field than the one used for GPRS authentication (see #USERID).	

### 3.5.7.9.4. E-mail Authentication Password - #EPASSW

<b>#EPASSW - E-mail Authentication Password</b>		<b>SELINT 0 / 1</b>
<b>AT#EPASSW= &lt;e-pwd&gt;</b>	Set command sets the password string to be used during the authentication step of the SMTP.  Parameter: <e-pwd> - e-mail authentication password, string type. - any string value up to max length reported in the Test command. (factory default is the empty string "")  Note: if no authentication is required then the <e-pwd> parameter shall be empty	

#EPASSW - E-mail Authentication Password		SELINT 0 / 1
AT#EPASSW=?		"".
Test command returns the maximum allowed length of the string parameter <e-pwd>.		
Example	AT#USERID="myPassword" OK	
Note	It is a different password field than the one used for GPRS authentication (see #PASSW).	

#EPASSW - E-mail Authentication Password		SELINT 2	
AT#EPASSW=[<e-pwd>]		Set command sets the password string to be used during the authentication step of the SMTP.  Parameter: <e-pwd> - e-mail authentication password, string type. - any string value up to max length reported in the Test command. (factory default is the empty string "")  Note: if no authentication is required then the <e-pwd> parameter shall be empty "".	
AT#EPASSW=?		Test command returns the maximum allowed length of the string parameter <e-pwd>.	
Example	AT#EPASSW="myPassword" OK		
Note	It is a different password field than the one used for GPRS authentication (see #PASSW).		

### 3.5.7.9.5. E-mail Sending With GPRS Context Activation - #SEMAIL

#SEMAIL - E-mail Sending With GPRS Context Activation		SELINT 0 / 1
AT#SEMAIL=<da>,<subj>	<p>Execution command activates a GPRS context, if not previously activated by #EMAILACT, and sends an e-mail message. The GPRS context is deactivated when the e-mail is sent.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;da&gt; - destination address, string type (maximum length 100 characters).</li> <li>&lt;subj&gt; - subject of the message, string type (maximum length 100 characters).</li> </ul> <p>The device responds to the command with the prompt '&gt;' and awaits for the message body text.</p> <p>To complete the operation send <b>Ctrl-Z</b> char (<b>0x1A</b> hex); to exit without writing the message send <b>ESC</b> char (<b>0x1B</b> hex).</p> <p>If e-mail message is successfully sent, then the response is <b>OK</b>.</p>	

#SEMAIL - E-mail Sending With GPRS Context Activation		SELINT 0 / 1
	<p>If message sending fails for some reason, an error code is reported.</p> <p>Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated.</p> <p>Note: Care must be taken to ensure that during the command execution, no other commands are issued.</p> <p>To avoid malfunctions is suggested to wait for the <b>OK</b> or <b>ERROR / +CMS ERROR:&lt;err&gt;</b> response before issuing further commands.</p> <p>Note: maximum length for message body is 1024 bytes, trying to send more data will cause the surplus to be discarded and lost.</p>	
Example	AT#SEMAIL="me@myaddress.com","subject of the mail" >message body... this is the text of the mail message... CTRL-Z  ..wait.. OK  <i>Message has been sent.</i>	
Note	This command is obsolete. It's suggested to use the couple <b>#EMAILACT</b> and <b>#EMAILD</b> instead of it.	
#SEMAIL - E-mail Sending With GPRS Context Activation		SELINT 2
AT#SEMAIL=[<da>,<subj>]	<p>Execution command activates a GPRS context, if not previously activated by <b>#EMAILACT</b>, and sends an e-mail message. The GPRS context is deactivated when the e-mail is sent.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;<b>da</b>&gt; - destination address, string type. (maximum length 100 characters)</li> <li>&lt;<b>subj</b>&gt; - subject of the message, string type. (maximum length 100 characters)</li> </ul> <p>The device responds to the command with the prompt '&gt;' and awaits for the message body text.</p> <p>To complete the operation send <b>Ctrl-Z</b> char (<b>0x1A</b> hex); to exit without writing the message send <b>ESC</b> char (<b>0x1B</b> hex).</p> <p>If e-mail message is successfully sent, then the response is <b>OK</b>.          If message sending fails for some reason, an error code is reported.</p> <p>Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated.</p> <p>Note: Care must be taken to ensure that during the command execution, no other commands are issued.</p>	

#SEMAIL - E-mail Sending With GPRS Context Activation	SELINT 2
	<p>To avoid malfunctions it is suggested to wait for the <b>OK</b> or <b>ERROR / +CMS ERROR:&lt;err&gt;</b> response before issuing further commands.</p> <p>Note: maximum length for message body is 1024 bytes, trying to send more data will cause the surplus to be discarded and lost.</p> <p>Note: this command is not allowed if GSM context is active (see <b>AT#SGACT=0,1</b>).</p>
<b>AT#SEMAIL=?</b>	Test command returns the <b>OK</b> result code.
Example	<pre>AT#SEMAIL="me@myaddress.com","subject of the mail" &gt;message body... this is the text of the mail message... CTRL-Z  ..wait.. OK  Message has been sent.</pre>

### 3.5.7.9.6. E-mail GPRS Context Activation - #EMAILACT

#EMAILACT - E-mail GPRS Context Activation	SELINT 0 / 1
<b>AT#EMAILACT[=&lt;mode&gt;]</b> <p>Execution command deactivates/activates the GPRS context, eventually proceeding with the authentication with the parameters given with <b>#PASSW</b> and <b>#USERID</b>.</p> <p>Parameter:  <b>&lt;mode&gt;</b> - GPRS context activation mode          0 - GPRS context deactivation request          1 - GPRS context activation request</p> <p>Note: issuing <b>AT#EMAILACT&lt;CR&gt;</b> reports the current status of the GPRS context for the e-mail, in the format:</p> <p><b>#EMAILACT: &lt;status&gt;</b></p> <p>where:  <b>&lt;status&gt;</b>          0 - GPRS context deactivated          1 - GPRS context activated</p> <p>Note: issuing <b>AT#EMAILACT=&lt;CR&gt;</b> is the same as issuing the command <b>AT#EMAILACT=0&lt;CR&gt;</b>.</p>	

#EMAILACT - E-mail GPRS Context Activation	SELINT 0 / 1
	<p>Note: if you request a GPRS context deactivation during a call issuing either <b>AT#GPRS=0</b> or <b>AT#EMAILACT=0</b> and then, after the call termination, you want to request a GPRS context activation through <b>#EMAILACT</b>, you <b>need</b> to issue the following sequence of three commands</p> <pre>AT#EMAILACT=1 OK AT#EMAILACT=0 OK AT#EMAILACT=1 OK</pre>
<b>AT#EMAILACT?</b>	Read command has the same effect of the Execution command <b>AT#EMAILACT&lt;CR&gt;</b> .
<b>AT#EMAILACT=?</b>	Test command returns the allowed values for parameter <mode>.
Example	<pre>AT#EMAILACT=1 OK Now GPRS Context has been activated</pre> <pre>AT# EMAILACT=0 OK Now GPRS context has been deactivated.</pre>
Note	It is strongly recommended to use the same command (e.g. <b>#EMAILACT</b> ) to activate the context, deactivate it and interrogate about its status.

#EMAILACT - E-mail GPRS Context Activation	SELINT 2
<b>AT#EMAILACT=[&lt;mode&gt;]</b>	<p>Execution command deactivates/activates the <b>PDP context #1</b>, eventually proceeding with the authentication with the parameters given with <b>#PASSW</b> and <b>#USERID</b>.</p> <p>Parameter:</p> <p>&lt;mode&gt; - <b>PDP context</b> activation mode</p> <ul style="list-style-type: none"> <li>0 - GPRS context deactivation request</li> <li>1 - GPRS context activation request</li> </ul> <p>Note: at least a <b>socket identifier</b> needs to be associated with <b>PDP context #1</b> in order to every <b>#EMAILACT</b> action be effective; by default the <b>PDP context #1</b> is associated with <b>socket identifiers 1, 2 and 3</b>, but it is possible to modify these associations through <b>#SCFG</b>. Trying to issue a <b>#EMAILACT</b> action when <b>no socket identifier</b> is associated with <b>PDP context #1</b> raises an error.</p> <p>Note: if the <b>PDP context #1</b> has been activated issuing <b>AT#EMAILACT=1</b>, then</p> <ul style="list-style-type: none"> <li>• if you request to deactivate the <b>PDP context #1</b> issuing <b>AT#GPRS=0</b> DTE receives the final result code <b>OK</b> but nothing really happens</li> <li>• if you request to deactivate the <b>PDP context #1 during a call</b> issuing <b>AT#EMAILACT=0</b> and then, after the call termination, you want to activate the <b>PDP context #1</b> again through <b>#EMAILACT</b>, you <b>need</b> to issue the</li> </ul>

#EMAILACT - E-mail GPRS Context Activation	SELINT 2
	<p>following sequence of three commands</p> <pre>AT#EMAILACT=1 OK AT#EMAILACT=0 OK AT#EMAILACT=1 OK</pre> <p><i>(Analogous considerations if you want to request the activation of PDP context #I issuing AT#GPRS=1, see #GPRS)</i></p> <p>Note: this command is not allowed if GSM context is active (see AT#SGACT=0,1).</p>
AT#EMAILACT?	<p>Read command reports the current status of the GPRS context for the e-mail, in the format:</p> <p><b>#EMAILACT: &lt;status&gt;</b></p> <p>where:  <b>&lt;status&gt;</b>      0 - GPRS context deactivated      1 - GPRS context activated</p>
AT#EMAILACT=?	<p>Test command returns the allowed values for parameter &lt;mode&gt;.</p>
Example	<p>AT#EMAILACT=1      OK  <i>Now GPRS Context has been activated</i></p> <p>AT# EMAILACT=0      OK  <i>Now GPRS context has been deactivated.</i></p>
Note	<p>It is strongly recommended to use the same command (e.g. #EMAILACT) to activate the context, deactivate it and interrogate about its status.</p>

### 3.5.7.9.7. E-mail Sending - #EMAILD

#EMAILD - E-mail Sending	SELINT 0 / 1
AT#EMAILD=<da>, <subj>	<p>Execution command sends an e-mail message if GPRS context has already been activated by either AT#EMAILACT=1 or AT#GPRS=1.</p> <p>Parameters:</p> <p>&lt;da&gt; - destination address, string type (maximum length 100 characters).      &lt;subj&gt; - subject of the message, string type (maximum length 100 characters).</p> <p>The device responds to the command with the prompt '&gt;' and awaits for the message body text.</p>

#EMAILD - E-mail Sending	SELINT 0 / 1
	<p>To complete the operation send <b>Ctrl-Z</b> char (<b>0x1A</b> hex); to exit without writing the message send <b>ESC</b> char (<b>0x1B</b> hex).</p> <p>If e-mail message is successfully sent, then the response is <b>OK</b>. If message sending fails for some reason, an error code is reported.</p> <p>Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated.</p> <p>Note: Care must be taken to ensure that during the command execution, no other commands are issued.</p> <p>To avoid malfunctions is suggested to wait for the <b>OK</b> or <b>ERROR / +CMS ERROR:&lt;err&gt;</b> response before issuing further commands.</p> <p>Note: maximum length for message body is 1024 bytes, trying to send more data will cause the surplus to be discarded and lost.</p>
Example	<pre>AT#EMAILD="me@myaddress.com","subject of the mail" &gt;message body... this is the text of the mail message... CTRL-Z  ..wait.. OK Message has been sent.</pre>
Note	The only difference between this command and the #SEMAIL is that this command does not interact with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the #EMAILACT setting, thus, when the connection made with #EMAILD is closed, the context status is maintained.

#EMAILD - E-mail Sending	SELINT 2
AT#EMAILD=[<da>,<subj>]	<p>Execution command sends an e-mail message if GPRS context has already been activated by either <b>AT#SGACT=1,1</b> or <b>AT#EMAILACT=1</b> or <b>AT#GPRS=1</b>.</p> <p>It is also possible to send an e-mail on the GSM context, if it has already been activated by <b>AT#SGACT=0,1</b>.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;<b>da</b>&gt; - destination address, string type. (maximum length 100 characters)</li> <li>&lt;<b>subj</b>&gt; - subject of the message, string type. (maximum length 100 characters)</li> </ul> <p>The device responds to the command with the prompt '&gt;' and awaits for the message body text.</p> <p>To complete the operation send <b>Ctrl-Z</b> char (<b>0x1A</b> hex); to exit without</p>

#EMAILD - E-mail Sending	SELINT 2
	<p>writing the message send ESC char (<b>0x1B</b> hex).</p> <p>If e-mail message is successfully sent, then the response is <b>OK</b>. If message sending fails for some reason, an error code is reported.</p> <p>Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated.</p> <p>Note: Care must be taken to ensure that during the command execution, no other commands are issued.</p> <p>To avoid malfunctions is suggested to wait for the <b>OK</b> or <b>ERROR / +CMS ERROR:&lt;err&gt;</b> response before issuing further commands.</p> <p>Note: maximum length for message body is 1024 bytes for versions till 7.03.02/7.02.07 and from 10.0x.xx0 till 10.0x.xx2, 1500 bytes for versions starting from 10.0x.xx3, trying to send more data will cause the surplus to be discarded and lost.</p>
AT#EMAILD=?	Test command returns the <b>OK</b> result code.
Example	<pre>AT#EMAILD="me@myaddress.com","subject of the mail" &gt;message body... this is the text of the mail message... CTRL-Z  ..wait.. OK Message has been sent.</pre>
Note	The only difference between this command (set using GPRS context) and the <b>#SEMAIL</b> is that this command does not interact with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the <b>#EMAILACT (#SGACT)</b> setting, thus, when the connection made with <b>#EMAILD</b> is closed, the context status is maintained.

### 3.5.7.9.8. E-mail Parameters Save - #ESAV

#ESAV - E-mail Parameters Save	SELINT 0 / 1
AT#ESAV	<p>Execution command stores the e-mail parameters in the NVM of the device.</p> <p>The e-mail parameters to store are:</p> <ul style="list-style-type: none"> <li>- E-mail User Name</li> <li>- E-mail Password</li> <li>- E-mail Sender Address</li> <li>- E-mail SMTP server</li> </ul>
Note	If some parameters have not been previously specified then a default value will be taken.

<b>#ESAV - E-mail Parameters Save</b>		<b>SELINT 2</b>
<b>AT#ESAV</b>	Execution command stores the e-mail parameters in the NVM of the device.  The e-mail parameters to store are: <ul style="list-style-type: none"><li>- E-mail User Name</li><li>- E-mail Password</li><li>- E-mail Sender Address</li><li>- E-mail SMTP server</li></ul>	
<b>AT#ESAV=?</b>	Test command returns the <b>OK</b> result code.	
Note	If some parameters have not been previously specified then a default value will be taken.	

### 3.5.7.9.9. E-mail Parameters Reset - #ERST

<b>#ERST - E-mail Parameters Reset</b>		<b>SELINT 0 / 1</b>
<b>AT#ERST</b>	Execution command resets the e-mail parameters to the “factory default” configuration and stores them in the NVM of the device.  The e-mail parameters to reset are: <ul style="list-style-type: none"><li>- E-mail User Name</li><li>- E-mail Password</li><li>- E-mail Sender Address</li><li>- E-mail SMTP server</li></ul>	

<b>#ERST - E-mail Parameters Reset</b>		<b>SELINT 2</b>
<b>AT#ERST</b>	Execution command resets the e-mail parameters to the “factory default” configuration and stores them in the NVM of the device.  The e-mail parameters to reset are: <ul style="list-style-type: none"><li>- E-mail User Name</li><li>- E-mail Password</li><li>- E-mail Sender Address</li><li>- E-mail SMTP server</li></ul>	
<b>AT#ERST=?</b>	Test command returns the <b>OK</b> result code.	

### 3.5.7.9.10. SMTP Read Message - #EMAILMSG

<b>#EMAILMSG - SMTP Read Message</b>		<b>SELINT 0 / 1</b>
<b>AT#EMAILMSG</b>	Execution command returns the last response from SMTP server.	
<b>AT#EMAILMSG?</b>	Read command has the same behaviour as Execution command.	

<b>#EMAILMSG - SMTP Read Message</b>		<b>SELINT 2</b>
<b>AT#EMAILMSG</b>	Execution command returns the last response from SMTP server.	
<b>AT#EMAILMSG=?</b>	Test command returns the <b>OK</b> result code.	

### 3.5.7.9.11. Send mail with attachment - #SMTPCL

#SMTPCL – send mail with attachment	SELINT 2
<p><b>AT#SMTPCL=</b>  <b>&lt;da&gt;,&lt;subj&gt;,&lt;att&gt;</b>  <b>[&lt;filename&gt;,&lt;encod&gt;]</b></p> <p>This command permits to send an email with different types of attachments if GPRS context has already been activated (#SGACT,#EMAILACT or #GPRS).</p> <p>After sending message body text (as with #EMAILD), the command switch to online mode if attachment has to be sent.  While in online mode data received on the serial port are transmitted on the SMTP socket as MIME attachment.  The escape sequence has to be sent to close the SMTP connection.</p> <p>Encoding of data received on the serial port is performed if required (binary data), before transmission on the SMTP socket.</p> <p>Parameters:</p> <p><b>&lt;da&gt;</b> - destination address, string type.  (maximum length 100 characters)</p> <p><b>&lt;subj&gt;</b> - subject of the message, string type.  (maximum length 100 characters)</p> <p><b>&lt;att&gt;</b> - attached file flag  0 – no attachment  1 – attach a txt file  2 – attach a binary file(jpg,bin, pdf,...)</p> <p><b>&lt;filename&gt;</b> - attached file name  (maximum length 50 characters)</p> <p><b>&lt;encod&gt;</b> -Content-Transfer-Encoding used for attachment  0 – “7bit” means data all represented as short lines of US-ASCII data  1 – “base64” designed to represent arbitrary sequences of octets in a form that need not be humanly readable</p> <p>Note: if no attachment (<b>&lt;att&gt;</b> 0) has to be sent, the behavior is the same as with #EMAILD.  OK after CTRL-Z is returned(if connection was successful), the switch to online mode is not performed.</p> <p>Note:  If a txt file (<b>&lt;att&gt;</b>=1) is attached, only <b>&lt;encod&gt;</b>0 (“7bit”) is possible.  If a binary file (<b>&lt;att&gt;</b>=2) is attached, only <b>&lt;encod&gt;</b>1 (“base64”) is possible.</p> <p>Note: if <b>&lt;att&gt;</b>=0 and <b>&lt;filename&gt;</b> is present and not empty, the attachment won’t be considered</p> <p>Note: if <b>&lt;att&gt;</b> 1 or 2 and <b>&lt;filename&gt;</b> is not present, command</p>	

	<p>will return an ERROR</p> <p><b>Note:</b> default SMTP port (25) is used</p>
<b>AT#SMTPCL=?</b>	<p>Test command reports the supported range of values for parameters  <b>&lt;da&gt;,&lt;subj&gt;,&lt;att&gt;[,&lt;filename&gt;,&lt;encod&gt;]</b></p>
Examples	<p>at#smtpcl="me@myaddress.com","test1",1,"sample.txt",0  &gt;message body...this is the text of the mail message...</p> <p><i>Send CTRL-Z</i>  CONNECT</p> <p><i>...data received on the serial port are sent as attachment....</i></p> <p><i>Send escape sequence to close the SMTP connection</i>  +++  NO CARRIER</p> <p>at#smtpcl="me@myaddress.com","test2",2,"image.jpg",1  &gt;message body...this is the text of the mail message...</p> <p><i>Send CTRL-Z</i>  CONNECT</p> <p><i>...data received on the serial port are base64-encoded and sent as attachment....</i></p> <p><i>Send escape sequence to close the SMTP connection</i>  +++  NO CARRIER</p>

### 3.5.7.9.12. calculate and update date and time - #NTP

#NTP – calculate and update date and time	SELINT 2
<p><b>AT#NTP=</b>  <b>&lt;NTPaddr&gt;,</b>  <b>&lt;NTPPort&gt;,</b>  <b>&lt;update_module_clock&gt;,</b>  <b>&lt;timeout&gt;</b></p>	<p>This command permits to calculate and update date and time through NTP protocol(RFC2030), sending a request to a NTP server.</p> <p>Parameters:</p> <p><b>&lt;NTPaddr&gt;</b> - address of the NTP server, string type. This parameter can be either:</p>

	<ul style="list-style-type: none"> <li>- any valid IP address in the format: “xxx.xxx.xxx.xxx”</li> <li>- any host name to be solved with a DNS query</li> </ul> <p><b>&lt;NTPPort&gt;</b> - NTP server port to contact 1..65535</p> <p><b>&lt;update_module_clock&gt;</b> 0 - no update module clock 1 – update module clock</p> <p><b>&lt;timeout&gt;</b> - waiting timeout for server response in seconds 1..10</p>
<b>AT#NTP=?</b>	Test command reports the supported range of values for parameters <b>&lt;NTPAddr&gt;</b> , <b>&lt;NTPPort&gt;</b> , <b>&lt;update_module_clock&gt;</b> , and <b>&lt;timeout&gt;</b>
Example	<pre>at#ntp="ntp1.inrim.it",123,1,2 #NTP: 12/01/27,14:42:38 OK .... at+cclk? +CCLK: "12/01/27,14:42:39+00"  OK</pre>

### 3.5.7.10. Easy Scan® Extension AT Commands

#### NOTE:

it is strongly suggested to issue all the Easy Scan® Extension AT commands with **NO SIM** inserted, to avoid a potential conflict with normal module operations, such as “incoming call”, “periodic location update, “periodic routing area update” and so on.

#### 3.5.7.10.1. Network Survey - #CSURV

#CSURV - Network Survey		SELINT 0 / 1
<b>AT#CSURV</b> [=<s>,<e>]	Execution command allows to perform a quick survey through band channels, starting from channel <s> to channel <e>. If parameters are omitted, a full band scan is performed.	
<b>AT*CSURV</b> [=<s>,<e>] (both syntax are)	Parameters: <s> - starting channel	

#CSURV - Network Survey	SELINT 0 / 1
<p>possible)</p> <p>&lt;e&gt; - ending channel</p> <p>After issuing the command the device responds with the string:</p> <p><b>Network survey started...</b></p> <p>and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format:</p> <p style="text-align: center;"><b>(For BCCH-Carrier)</b></p> <pre>arfcn: &lt;arfcn&gt; bsic: &lt;bsic&gt; rxLev: &lt;rxLev&gt; ber: &lt;ber&gt; mcc: &lt;mcc&gt; mnc: &lt;mnc&gt; &lt;mnc&gt; lac: &lt;lac&gt; cellId: &lt;cellId&gt; cellStatus: &lt;cellStatus&gt; numArfcn: &lt;numArfcn&gt; arfcn: [&lt;arfcn1&gt; ..[&lt;arfcn64&gt;]] [numChannels: &lt;numChannels&gt; array: [&lt;ba1&gt; ..[&lt;ba32&gt;]] [pbch: &lt;pbch&gt; [nom: &lt;nom&gt; rac: &lt;rac&gt; spgc: &lt;spgc&gt; pat: &lt;pat&gt; nco: &lt;nco&gt; t3168: &lt;t3168&gt; t3192: &lt;t3192&gt; drxmax: &lt;drxmax&gt; ctrlAck: &lt;ctrlAck&gt; bsCVmax: &lt;bsCVmax&gt; alpha: &lt;alpha&gt; pcMeasCh: &lt;pcMeasCh&gt;]]] &lt;CR&gt;&lt;LF&gt;&lt;CR&gt;&lt;LF&gt;&lt;CR&gt;&lt;LF&gt;</pre> <p>where:</p> <p>&lt;arfcn&gt; - C0 carrier assigned radio channel (BCCH - Broadcast Control Channel)</p> <p>&lt;bsic&gt; - base station identification code</p> <p>&lt;rxLev&gt; - reception level (in dBm)</p> <p>&lt;ber&gt; - bit error rate (in %)</p> <p>&lt;mcc&gt; - mobile country code</p> <p>&lt;mnc&gt; - mobile network code</p> <p>&lt;lac&gt; - location area code</p> <p>&lt;cellId&gt; - cell identifier</p> <p>&lt;cellStatus&gt; - cell status</p> <p>..CELL_SUITABLE - C0 is a suitable cell.</p> <p>CELL_LOW_PRIORITY - the cell is low priority based on the received system information.</p> <p>CELL_FORBIDDEN - the cell is forbidden.</p> <p>CELL_BARRED - the cell is barred based on the received system information.</p> <p>CELL_LOW_LEVEL - the cell &lt;rxLev&gt; is low.</p> <p>CELL_OTHER - none of the above e.g. exclusion timer running, no BCCH available...etc.</p> <p>&lt;numArfcn&gt; - number of valid channels in the Cell Channel Description</p> <p>&lt;arfcn&gt; - arfcn of a valid channel in the Cell Channel Description (<i>n</i> is in the range 1..&lt;numArfcn&gt;)</p> <p>&lt;numChannels&gt; - number of valid channels in the BCCH Allocation list; the output of this information for non-serving cells depends on last #CSURVEXT setting:</p> <ol style="list-style-type: none"> <li>if #CSURVEXT=0 this information is displayed only for serving cell</li> <li>if #CSURVEXT=1 or 2 this information is displayed also for</li> </ol>	

#CSURV - Network Survey	SELINT 0 / 1
	<p>every valid scanned BCCH carrier.</p> <p>&lt;ban&gt; - arfcn of a valid channel in the BA list (<i>n</i> is in the range 1..&lt;numChannels&gt;); the output of this information for non-serving cells depends on last #CSURVEXT setting:</p> <ol style="list-style-type: none"> <li>1. if #CSURVEXT=0 this information is displayed only for serving cell</li> <li>2. if #CSURVEXT=1 or 2 this information is displayed also for every valid scanned BCCH carrier.</li> </ol> <p>(The following informations will be printed only if GPRS is supported in the cell)</p> <p>&lt;pbcch&gt; - packet broadcast control channel</p> <ul style="list-style-type: none"> <li>0 - pbcch not activated on the cell</li> <li>1 - pbcch activated on the cell</li> </ul> <p>&lt;nom&gt; - network operation mode</p> <ul style="list-style-type: none"> <li>1</li> <li>2</li> <li>3</li> </ul> <p>&lt;rac&gt; - routing area code</p> <ul style="list-style-type: none"> <li>0..255 -</li> </ul> <p>&lt;spgc&gt; - SPLIT_PG_CYCLE support</p> <ul style="list-style-type: none"> <li>..0 - SPLIT_PG_CYCLE is not supported on CCCH on this cell</li> <li>..1 - SPLIT_PG_CYCLE is supported on CCCH on this cell</li> </ul> <p>&lt;pat&gt; - priority access threshold</p> <ul style="list-style-type: none"> <li>0 -</li> <li>3..6 -</li> </ul> <p>&lt;nco&gt; - network control order</p> <ul style="list-style-type: none"> <li>0..2 -</li> </ul> <p>&lt;t3168&gt; - timer 3168</p> <p>&lt;t3192&gt; - timer 3192</p> <p>&lt;drxmax&gt; - discontinuous reception max time (in seconds)</p> <p>&lt;ctrlAck&gt; - packed control ack</p> <p>&lt;bsCVmax&gt; - blocked sequenc countdown max value</p> <p>&lt;alpha&gt; - alpha parameter for power control</p> <p>&lt;pcMeasCh&gt; - type of channel which shall be used for downlink measurements for power control</p> <ul style="list-style-type: none"> <li>0 - BCCH</li> <li>1 - PDCH</li> </ul> <p style="text-align: center;"><b>(For non BCCH-Carrier)</b></p> <p><b>arfcn: &lt;arfcn&gt; rxLev: &lt;rxLev&gt;</b></p> <p>where:</p> <p>&lt;arfcn&gt; - RF channel</p> <p>&lt;rxLev&gt; - reception level (in dBm)</p>

<b>#CSURV - Network Survey</b>		<b>SELINT 0 / 1</b>
	<p>Lastly, the #CSURV output ends in two ways, depending on the last #CSURVF setting:</p> <p style="text-align: center;">if #CSURVF=0 or #CSURVF=1</p> <p>The output ends with the string:</p> <p><b>Network survey ended</b></p> <p style="text-align: center;">if #CSURVF=2</p> <p>the output ends with the string:</p> <p><b>Network survey ended (Carrier: &lt;NoARFCN&gt; BCCh: &lt;NoBCCh&gt;)</b></p> <p>where</p> <p>&lt;NoARFCN&gt; - number of scanned frequencies</p> <p>&lt;NoBCCh&gt; - number of found BCCh</p>	
<b>AT#CSURV?</b>	Read command has the same behaviour as Execution command with parameters omitted.	
<b>AT*CSURV?</b>		
Example	<p>AT#CSURV</p> <p>Network survey started...</p> <p>arfcn: 48 bsic: 24 rxLev: -52 ber: 0.00 mcc: 610 mnc: 1 lac: 33281 cellId: 3648 cellStatus: CELL_SUITABLE numArfcn: 2 arfcn: 30 48 numChannels: 5 array: 14 19 22 48 82</p> <p>arfcn: 14 rxLev: 8</p> <p>Network survey ended</p> <p>OK</p>	
Note	The command is executed within max. 2 minutes.	

<b>#CSURV - Network Survey</b>		<b>SELINT 2</b>
<b>AT#CSURV[=&lt;s&gt;,&lt;e&gt;]]</b> <b>AT*CSURV[=&lt;s&gt;,&lt;e&gt;]]</b> <i>(both syntax are possible; the second syntax is maintained only for backward compatibility and will not be present in future versions)</i>	<p>Execution command allows to perform a quick survey through band channels, starting from channel &lt;s&gt; to channel &lt;e&gt;. Issuing AT#CSURV&lt;CR&gt;, a full band scan is performed.</p> <p>Parameters:</p> <p>&lt;s&gt; - starting channel</p> <p>&lt;e&gt; - ending channel</p> <p>After issuing the command the device responds with the string:</p> <p><b>Network survey started...</b></p>	

## #CSURV - Network Survey

## SELINT 2

and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format:

### (For BCCH-Carrier)

```
arfcn: <arfcn> bsic: <bsic> rxLev: <rxLev> ber: <ber> mcc: <mcc> mnc: <mnc>
<mnc> lac: <lac> cellId: <cellId> cellStatus: <cellStatus> numArfcn: <numArfcn>
arfcn: [<arfcn1> ..[<arfcn64>]] [numChannels: <numChannels> array: [<ba1> ..[<ba32>]] [pbccch: <pbccch> [nom: <nom>
rac: <rac> spgc: <spgc> pat: <pat> nco: <nco> t3168: <t3168> t3192: <t3192>
drxmax: <drxmax> ctrlAck: <ctrlAck> bsCVmax: <bsCVmax>
alpha: <alpha> pcMeasCh: <pcMeasCh>]]] mstxpwr: <mstxpwr> rxaccmin: <rxaccmin>
croffset: <croffset> penaltyt: <penaltyt> t3212: <t3212> CRH: <CRH>
```

<CR><LF><CR><LF><CR><LF>

where:

**<arfcn>** - C0 carrier assigned radio channel (BCCH - Broadcast Control Channel)  
**<bsic>** - base station identification code; if #CSURVF last setting is 0, **<bsic>** is a decimal number, else it is **at the most** a 2-digits octal number  
**<rxLev>** - decimal number; it is the reception level (in dBm)  
**<ber>** - decimal number; it is the bit error rate (in %)  
**<mcc>** - hexadecimal 3-digits number; it is the mobile country code  
**<mnc>** - hexadecimal 2-digits number; it is the mobile network code  
**<lac>** - location area code; if #CSURVF last setting is 0, **<lac>** is a decimal number, else it is a 4-digits hexadecimal number  
**<cellId>** - cell identifier; if #CSURVF last setting is 0, **<cellId>** is a decimal number, else it is a 4-digits hexadecimal number  
**<cellStatus>** - string type; it is the cell status  
..CELL\_SUITABLE - C0 is a suitable cell.  
CELL\_LOW\_PRIORITY - the cell is low priority based on the received system information.  
CELL\_FORBIDDEN - the cell is forbidden.  
CELL\_BARRED - the cell is barred based on the received system information.  
CELL\_LOW\_LEVEL - the cell **<rxLev>** is low.  
CELL\_OTHER - none of the above e.g. exclusion timer running, no BCCH available...etc.  
**<numArfcn>** - decimal number; it is the number of valid channels in the Cell Channel Description  
**<arfcn>** - decimal number; it is the arfcn of a valid channel in the Cell Channel Description (*n* is in the range 1..<numArfcn>)  
**<numChannels>** - decimal number; it is the number of valid channels in the BCCH Allocation list; the output of this information for non-serving cells depends on last #CSURVEXT setting:  
2. if #CSURVEXT=0 this information is displayed only for serving cell

#CSURV - Network Survey	SELINT 2
	<p>3. if #CSURVEXT=1, 2 or 3 this information is displayed also for every valid scanned BCCH carrier.</p> <p>&lt;ban&gt; - decimal number; it is the arfcn of a valid channel in the BA list (<i>n</i> is in the range 1..&lt;numChannels&gt;); the output of this information for non-serving cells depends on last #CSURVEXT setting:</p> <ol style="list-style-type: none"> <li>2. if #CSURVEXT=0 this information is displayed only for serving cell</li> <li>3. if #CSURVEXT=1 or 2 this information is displayed also for every valid scanned BCCH carrier.</li> </ol> <p>(The following informations will be printed only if GPRS is supported in the cell)</p> <p>&lt;pbcch&gt; - packet broadcast control channel</p> <ul style="list-style-type: none"> <li>0 - pbcch not activated on the cell</li> <li>1 - pbcch activated on the cell</li> </ul> <p>&lt;nom&gt; - network operation mode</p> <ul style="list-style-type: none"> <li>1</li> <li>2</li> <li>3</li> </ul> <p>&lt;rac&gt; - routing area code</p> <ul style="list-style-type: none"> <li>0..255 -</li> </ul> <p>&lt;spgc&gt; - SPLIT_PG_CYCLE support</p> <ul style="list-style-type: none"> <li>..0 - SPLIT_PG_CYCLE is not supported on CCCH on this cell</li> <li>..1 - SPLIT_PG_CYCLE is supported on CCCH on this cell</li> </ul> <p>&lt;pat&gt; - priority access threshold</p> <ul style="list-style-type: none"> <li>0 -</li> <li>3..6 -</li> </ul> <p>&lt;nco&gt; - network control order</p> <ul style="list-style-type: none"> <li>0..2 -</li> </ul> <p>&lt;t3168&gt; - timer 3168</p> <p>&lt;t3192&gt; - timer 3192</p> <p>&lt;drxmax&gt; - discontinuous reception max time (in seconds)</p> <p>&lt;ctrlAck&gt; - packed control ack</p> <p>&lt;bsCVmax&gt; - blocked sequenc countdown max value</p> <p>&lt;alpha&gt; - alpha parameter for power control</p> <p>&lt;pcMeasCh&gt; - type of channel which shall be used for downlink measurements for power control</p> <ul style="list-style-type: none"> <li>0 - BCCH</li> <li>1 - PDCH</li> </ul> <p>(The following informations will be printed only for #CSURVEXT=3 setting)</p> <p>&lt;mstxpwr&gt; - decimal TX power level</p> <p>&lt;rxaccmin&gt; - decimal RX level access min, range 0 - 63</p> <p>&lt;croffset&gt; - decimal Cell Reselection Offset, range 0 - 63</p> <p>&lt;penaltyt&gt; - decimal Penalty Time, range 0 - 31</p> <p>&lt;t3212&gt; - decimal T3212 Periodic Location Update Timer</p>

#CSURV - Network Survey	SELINT 2
	<p align="center"><b>&lt;CRH&gt; - decimal Cell Reselection Offset (For non BCCH-Carrier)</b></p> <p><b>arfcn: &lt;arfcn&gt; rxLev: &lt;rxLev&gt;</b></p> <p>where:  <b>&lt;arfcn&gt;</b> - decimal number; it is the RF channel  <b>&lt;rxLev&gt;</b> - decimal number; it is the reception level (in dBm)</p> <p>Lastly, the #CSURV output ends in two ways, depending on the last #CSURVF setting:</p> <p style="text-align: center;">if #CSURVF=0 or #CSURVF=1</p> <p>The output ends with the string:</p> <p align="center"><b>Network survey ended</b></p> <p style="text-align: center;">if #CSURVF=2</p> <p>the output ends with the string:</p> <p align="center"><b>Network survey ended (Carrier: &lt;NoARFCN&gt; BCCh: &lt;NoBCCh&gt;)</b></p> <p>where  <b>&lt;NoARFCN&gt;</b> - number of scanned frequencies  <b>&lt;NoBCCh&gt;</b> - number of found BCCh</p>
Example	<pre>AT#CSURV Network survey started... arfcn: 48 bsic: 24 rxLev: -52 ber: 0.00 mcc: 610 mnc: 1 lac: 33281 cellId: 3648 cellStatus: CELL_SUITABLE numArfcn: 2 arfcn: 30 48 numChannels: 5 array: 14 19 22 48 82 mstxpwr: 5 rxaccmin: 4 croffset: 4 penaltyt: 6 t3212: 2 CRH: 7  arfcn: 14 rxLev: 8  Network survey ended OK</pre>
Note	The command is executed within max. 2 minute.

### 3.5.7.10.2. Network Survey - #CSURVC

#CSURVC - Network Survey (Numeric Format)	SELINT 0 / 1
<b>AT#CSURVC</b> $[=<\text{s}>, <\text{e}>]$  <b>AT*CSURVC</b>	Execution command allows to perform a quick survey through band channels, starting from channel <b>&lt;s&gt;</b> to channel <b>&lt;e&gt;</b> . If parameters are omitted, a full band scan is performed.

#CSURVC - Network Survey (Numeric Format)		SELINT 0 / 1
<p>[=&lt;e&gt;]</p> <p>(both syntax are possible)</p>	<p>Parameters:</p> <p>&lt;s&gt; - starting channel      &lt;e&gt; - ending channel</p> <p>After issuing the command the device responds with the string:</p> <p><b>Network survey started...</b></p> <p>and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format:</p> <p style="text-align: center;"><b>(For BCCH-Carrier)</b></p> <pre>&lt;arfcn&gt;,&lt;bsic&gt;,&lt;rxLev&gt;,&lt;ber&gt;,&lt;mcc&gt;,&lt;mnc&gt;,&lt;lac&gt;,&lt;cellId&gt;, &lt;cellStatus&gt;,&lt;numArfcn&gt;[,&lt;arfcn1&gt; ..[ &lt;arfcn64&gt;]] [,&lt;numChannels&gt;[,&lt;ba1&gt; ..[&lt;ba32&gt;]][,&lt;pbech&gt; [,&lt;nom&gt;,&lt;rac&gt;,&lt;spgc&gt;, &lt;pat&gt;,&lt;nco&gt;,&lt;t3168&gt;,&lt;t3192&gt;,&lt;drxmax&gt;,&lt;ctrlAck&gt;,&lt;bsCVmax&gt;, &lt;alpha&gt;,&lt;pcMeasCh&gt;]]] &lt;CR&gt;&lt;LF&gt;&lt;CR&gt;&lt;LF&gt;&lt;CR&gt;&lt;LF&gt;</pre> <p>where:</p> <p>&lt;arfcn&gt; - C0 carrier assigned radio channel (BCCH - Broadcast Control Channel)      &lt;bsic&gt; - base station identification code      &lt;rxLev&gt; - reception level (in dBm)      &lt;ber&gt; - bit error rate (in %)      &lt;mcc&gt; - mobile country code      &lt;mnc&gt; - mobile network code      &lt;lac&gt; - location area code      &lt;cellId&gt; - cell identifier      &lt;cellStatus&gt; - cell status      ..0 - C0 is a suitable cell (CELL_SUITABLE).      1 - the cell is low priority based on the received system information (CELL_LOW_PRIORITY).      2 - the cell is forbidden (CELL_FORBIDDEN).      3 - the cell is barred based on the received system information (CELL_BARRED).      4 - the cell &lt;rxLev&gt; is low (CELL_LOW_LEVEL).      5 - none of the above e.g. exclusion timer running, no BCCH available...etc.. (CELL_OTHER).      &lt;numArfcn&gt; - number of valid channels in the Cell Channel Description      &lt;arfcnn&gt; - arfcn of a valid channel in the Cell Channel Description (<i>n</i> is in the range 1..&lt;numArfcn&gt;)      &lt;numChannels&gt; - number of valid channels in the BCCH Allocation list; the output of this information for non-serving cells depends on last #CSURVEXT setting:      1. if #CSURVEXT=0 this information is displayed only for serving cell</p>	

#CSURVC - Network Survey (Numeric Format)	SELINT 0 / 1
	<p>2. if #CSURVEXT=1 or 2 this information is displayed also for every valid scanned BCCH carrier.</p> <p><b>&lt;ban&gt;</b> - arfcn of a valid channel in the BA list (<i>n</i> is in the range 1..&lt;numChannels&gt;); the output of this information for non-serving cells depends on last #CSURVEXT setting:</p> <ol style="list-style-type: none"> <li>1. if #CSURVEXT=0 this information is displayed only for serving cell</li> <li>2. if #CSURVEXT=1 or 2 this information is displayed also for every valid scanned BCCH carrier.</li> </ol> <p>(The following informations will be printed only if GPRS is supported in the cell)</p> <p><b>&lt;pbcch&gt;</b> - packet broadcast control channel</p> <ul style="list-style-type: none"> <li>0 - pbcch not activated on the cell</li> <li>1 - pbcch activated on the cell</li> </ul> <p><b>&lt;nom&gt;</b> - network operation mode</p> <ul style="list-style-type: none"> <li>1</li> <li>2</li> <li>3</li> </ul> <p><b>&lt;rac&gt;</b> - routing area code</p> <ul style="list-style-type: none"> <li>0..255 -</li> </ul> <p><b>&lt;spgc&gt;</b> - SPLIT_PG_CYCLE support</p> <ul style="list-style-type: none"> <li>..0 - SPLIT_PG_CYCLE is not supported on CCCH on this cell</li> <li>..1 - SPLIT_PG_CYCLE is supported on CCCH on this cell</li> </ul> <p><b>&lt;pat&gt;</b> - priority access threshold</p> <ul style="list-style-type: none"> <li>0 -</li> <li>3..6 -</li> </ul> <p><b>&lt;nco&gt;</b> - network control order</p> <ul style="list-style-type: none"> <li>0..2 -</li> </ul> <p><b>&lt;t3168&gt;</b> - timer 3168</p> <p><b>&lt;t3192&gt;</b> - timer 3192</p> <p><b>&lt;drxmax&gt;</b> - discontinuous reception max time (in seconds)</p> <p><b>&lt;ctrlAck&gt;</b> - packed control ack</p> <p><b>&lt;bsCVmax&gt;</b> - blocked sequenc countdown max value</p> <p><b>&lt;alpha&gt;</b> - alpha parameter for power control</p> <p><b>&lt;pcMeasCh&gt;</b> - type of channel which shall be used for downlink measurements for power control</p> <ul style="list-style-type: none"> <li>0 - BCCH</li> <li>1 - PDCH</li> </ul> <p style="text-align: center;"><b>(For non BCCH-Carrier)</b></p> <p><b>&lt;arfcn&gt;,&lt;rxLev&gt;</b></p> <p>where:</p> <p><b>&lt;arfcn&gt;</b> - RF channel</p> <p><b>&lt;rxLev&gt;</b> - reception level (in dBm)</p> <p>The output ends with the string:</p>

#CSURVC - Network Survey (Numeric Format)		SELINT 0 / 1
<b>Network survey ended</b>		
<b>AT#CSURVC?</b>	Read command has the same behaviour as the Execution command with parameters omitted	
<b>AT*CSURVC?</b>		
Example	AT#CSURVC Network survey started... 48,24,-52,0,00,610,1,33281,3648,0,2,30 48,5,14 19 22 48 82 14,8 Network survey ended OK	
Note	The command is executed within max. 2 minute.  The information provided by #CSURVC is the same as that provided by #CSURV. The difference is that the output of #CSURVC is in numeric format only.	

#CSURVC - Network Survey (Numeric Format)		SELINT 2
<b>AT#CSURVC[= &lt;s&gt;,&lt;e&gt;]]</b>  <b>AT*CSURVC[= [&lt;s&gt;,&lt;e&gt;]]</b>  <i>(both syntax are possible; the second syntax is maintained only for backward compatibility and will not be present in future versions)</i>	Execution command allows to perform a quick survey through band channels, starting from channel <s> to channel <e>. Issuing <b>AT#CSURVC&lt;CR&gt;</b> , a full band scan is performed.  Parameters: <s> - starting channel <e> - ending channel  After issuing the command the device responds with the string:  <b>Network survey started...</b>  and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format:  <b>(For BCCH-Carrier)</b> <arfcn>,<bsic>,<rxLev>,<ber>,<mcc>,<mnc>,<lac>,<cellId>,<cellStatus>,<numArfcn>[,<arfcn1> ..[ <arfcn64>]]<numChannels>[,<ba1> ..[<ba32>]][,<pbch>[,<nom>,<rac>,<spgc>,<pat>,<nco>,<t3168>,<t3192>,<drxmax>,<ctrlAck>,<bsCVmax>,<alpha>,<pcMeasCh>]]],<mstxpwr>,<rxaccmin>,<croffset>,<penaltyt>,<t3212>,<CRH><CR><LF><CR><LF><CR><LF> where:

	<p style="text-align: right;"><b>#CSURVF=2</b></p> <p>the output ends with the string:  <b>Network survey ended (Carrier: &lt;NoARFCN&gt; BCCh: &lt;NoBCCh&gt;)</b>          where          &lt;NoARFCN&gt; - number of scanned frequencies          &lt;NoBCCh&gt; - number of found BCCh</p>	
Example	<pre>AT#CSURVC Network survey started... 48,24,-52,0.00,610,1,33281,3648,0,2,30 48,5,14 19 22 48 82,5,4,4,6,,2,7 14,8 Network survey ended OK</pre>	
Note	<p>The command is executed within max. 2 minute.</p> <p>The information provided by #CSURVC is the same as that provided by #CSURV. The difference is that the output of #CSURVC is in numeric format only.</p>	

### 3.5.7.10.3. Network Survey - #CSURVU

#CSURVU - Network Survey Of User Defined Channels		SELINT 0 / 1
AT#CSURVU=[ <ch1>[,<ch2>[,... [,<chn>]]]]	<p>Execution command allows to perform a quick survey through the given channels.</p> <p>The result format is like command #CSURV.</p>	
AT*CSURVU=[ <ch1>[,<ch2>[,... [,<chn>]]]] (both syntax are possible)	<p>Parameters:</p> <p>&lt;chn&gt; - channel number (arfcn)</p> <p>Note: issuing <b>AT#CSURVU=&lt;CR&gt;</b> is the same as issuing the command <b>AT#CSURVU=0&lt;CR&gt;</b>.</p>	
Example	<pre>AT#CSURVU=59,110 Network survey started... arfcn: 59 bsic: 16 rxLev: -76 ber: 0.00 mcc: 546 mnc: 1 lac: 54717 cellId: 21093 cellStatus: CELL_SUITABLE numArfcn 2 arfcn: 36 59  arfcn: 110 rxLev: -107  Network survey ended OK</pre>	
Note	The command is executed within max. 2 minute.	

<b>#CSURVU - Network Survey Of User Defined Channels</b>		<b>SELINT 2</b>	
AT#CSURVU=[ <ch1>[,<ch2>[,... ,<chn>]]]]	Execution command allows to perform a quick survey through the given channels.  The result format is like command #CSURV.		
AT*CSURVU=[ <ch1>[,<ch2>[,... ,<chn>]]]] <i>(both syntax are possible; the second syntax is maintained only for backward compatibility and will not be present in future versions)</i>	Parameters: <chn> - channel number (arfcn)  Note: the maximum number of channels is 20.		
Example		AT#CSURVU=59,110  Network survey started...  arfcn: 59 bsic: 16 rxLev: -76 ber: 0.00 mcc: 546 mnc: 1 lac: 54717 cellId: 21093 cellStatus: CELL_SUITABLE numArfcn 2 arfcn: 36 59  arfcn: 110 rxLev: -107  Network survey ended  OK	
Note	The command is executed within max. 2 minute.		

#### 3.5.7.10.4. Network Survey - #CSURVUC

<b>#CSURVUC - Network Survey Of User Defined Channels (Numeric Format)</b>		<b>SELINT 0 / 1</b>	
AT#CSURVUC=[ <ch1>[,<ch2>[,... ,<chn>]]]]	Execution command allows to perform a quick survey through the given channels.  The result format is like command #CSURVC.		
AT*CSURVUC=[ <ch1>[,<ch2>[,... ,<chn>]]]] <i>(both syntax are possible)</i>	Parameters: <chn> - channel number (arfcn)  Note: issuing AT#CSURVUC=<CR> is the same as issuing the command AT#CSURVUC=0<CR>.		
Example		AT#CSURVUC=59,110  Network survey started...  59,16,-76,0.00,546,1,54717,21093,0,2,36 59	

#CSURVUC - Network Survey Of User Defined Channels (Numeric Format)		SELINT 0 / 1
	110,-107  Network survey ended  OK	
Note	The command is executed within max. 2 minute.  The information provided by #CSURVUC is the same as that provided by #CSURVU. The difference is that the output of #CSURVUC is in numeric format only.	

#CSURVUC - Network Survey Of User Defined Channels (Numeric Format)		SELINT 2
AT#CSURVUC=[ <ch1>[,<ch2>[,... [,<chn>]]]]  AT*CSURVUC=[ <ch1>[,<ch2>[,... [,<chn>]]]] <i>(both syntax are possible; the second syntax is maintained only for backward compatibility and will not be present in future versions)</i>	Execution command allows to perform a quick survey through the given channels.  The result format is like command #CSURVC.  Parameters: <chn> - channel number (arfcn)  Note: the maximum number of channels is 20.	
Example	AT#CSURVUC=59,110  Network survey started...  59,16,-76,0.00,546,1,54717,21093,0,2,36 59,5,4,4,6,,2,7  110,-107  Network survey ended  OK	
Note	The command is executed within max. 2 minute.  The information provided by #CSURVUC is the same as that provided by #CSURVU. The difference is that the output of #CSURVUC is in numeric format only.	

### 3.5.7.10.5. BCCH Network Survey - #CSURVB

#CSURVB - BCCH Network Survey		SELINT 0 / 1
AT#CSURVB=<n>	<p>Execution command performs a quick network survey through <b>M</b> (maximum number of available frequencies depending on last selected band) channels. The survey stops as soon as &lt;n&gt; BCCH carriers are found.</p> <p>The result format is like command #CSURV.</p> <p>Parameter:            &lt;n&gt; - number of desired BCCH carriers            1..M</p>	
AT#CSURVB=?	<p>Test command reports the range of values for parameter &lt;n&gt; in the format:</p> <p>(1-M)</p> <p>where <b>M</b> is the maximum number of available frequencies depending on last selected band.</p>	

#CSURVB - BCCH Network Survey		SELINT 2
AT#CSURVB=[<n>]	<p>Execution command performs a quick network survey through <b>M</b> (maximum number of available frequencies depending on last selected band) channels. The survey stops as soon as &lt;n&gt; BCCH carriers are found.</p> <p>The result format is like command #CSURV.</p> <p>Parameter:            &lt;n&gt; - number of desired BCCH carriers            1..M</p>	
AT#CSURVB=?	<p>Test command reports the range of values for parameter &lt;n&gt; in the format:</p> <p>(1-M)</p> <p>where <b>M</b> is the maximum number of available frequencies depending on last selected band.</p>	

### 3.5.7.10.6. BCCH Network Survey - #CSURVBC

#CSURVBC - BCCH Network Survey (Numeric Format)		SELINT 0 / 1
AT#CSURVBC=<n>	<p>Execution command performs a quick network survey through <b>M</b> (maximum number of available frequencies depending on last selected band) channels. The survey stops as soon as &lt;n&gt; BCCH carriers are found.</p> <p>The result is given in numeric format and is like command #CSURVC.</p>	

#CSURVBC - BCCH Network Survey (Numeric Format)		SELINT 0 / 1
	Parameter: <n> - number of desired BCCH carriers 1..M	
AT#CSURVBC=?	Test command reports the range of values for parameter <n> in the format: <b>(1-M)</b> where M is the maximum number of available frequencies depending on last selected band.	

#CSURVBC - BCCH Network Survey (Numeric Format)		SELINT 2
AT#CSURVBC=[<n>]	Execution command performs a quick network survey through M (maximum number of available frequencies depending on last selected band) channels. The survey stops as soon as <n> BCCH carriers are found.  The result is given in numeric format and is like command #CSURVC.  Parameter: <n> - number of desired BCCH carriers 1..M	
AT#CSURVBC=?	Test command reports the range of values for parameter <n> in the format: <b>(1-M)</b> where M is the maximum number of available frequencies depending on last selected band.	

### 3.5.7.10.7. Network Survey Format - #CSURVF

#CSURVF - Network Survey Format		SELINT 0 / 1
AT#CSURVF[=<format>]]	Set command controls the format of the numbers output by all the Easy Scan®  Parameter: <format> - numbers format 0 - Decimal 1 - Hexadecimal values, no text 2 - Hexadecimal values with text  Note: issuing AT#CSURVF<CR> is the same as issuing the Read command.  Note: issuing AT#CSURVF=<CR> is the same as issuing the command AT#CSURVF=0<CR>.	
AT#CSURVF?	Read command reports the current number format, as follows:  <b>&lt;format&gt;</b>	

#CSURVF - Network Survey Format		SELINT 0 / 1
AT#CSURVF=?	Test command reports the supported range of values for the parameter <format>.	

#CSURVF - Network Survey Format		SELINT 2
AT#CSURVF=[<format>]	<p>Set command controls the format of the numbers output by all the Easy Scan®</p> <p>Parameter:  <b>&lt;format&gt;</b> - numbers format            0 - Decimal            1 - Hexadecimal values, no text            2 - Hexadecimal values with text         </p>	
AT#CSURVF?	Read command reports the current number format, as follows:	
	<format>	
AT#CSURVF=?	Test command reports the supported range of values for the parameter <format>.	

### 3.5.7.10.8. <CR><LF> Removing On Easy Scan® Commands Family - #CSURVNLF

#CSURVNLF - <CR><LF> Removing On Easy Scan® Commands Family		SELINT 0 / 1
AT#CSURVNLF[=<value>]	<p>Set command enables/disables the automatic &lt;CR&gt;&lt;LF&gt; removing from each information text line.</p> <p>Parameter:  <b>&lt;value&gt;</b>            0 - disables &lt;CR&gt;&lt;LF&gt; removing; they'll be present in the information text (factory default)            1 - remove &lt;CR&gt;&lt;LF&gt; from information text         </p> <p>Note: if parameter is omitted the behaviour of Set command is the same as Read command.</p>	
AT#CSURVNLF?	Read command reports whether automatic <CR><LF> removing is currently enabled or not, in the format:	
	<value>	
AT#CSURVNLF=?	Test command reports the range of values for parameter <value>.	

#CSURVNLF - <CR><LF> Removing On Easy Scan® Commands Family		SELINT 2
AT#CSURVNLF=[<value>]	<p>Set command enables/disables the automatic &lt;CR&gt;&lt;LF&gt; removing from each information text line.</p> <p>Parameter:  <b>&lt;value&gt;</b>            0 - disables &lt;CR&gt;&lt;LF&gt; removing; they'll be present in the information text (factory default)            1 - remove &lt;CR&gt;&lt;LF&gt; from information text         </p>	

#CSURVNLF - <CR><LF> Removing On Easy Scan® Commands Family		SELINT 2
AT#CSURVNLF?	Read command reports whether automatic <CR><LF> removing is currently enabled or not, in the format:  <value>	
AT#CSURVNLF=?	Test command reports the range of values for parameter <value>.	

### 3.5.7.10.9. Extended Network Survey - #CSURVEXT

#CSURVEXT - Extended Network Survey		SELINT 0 / 1
AT#CSURVEXT [=<value>]	<p>Set command enables/disables extended network survey.</p> <p>Parameter:</p> <p>&lt;value&gt;</p> <ul style="list-style-type: none"> <li>0 - disables extended network survey (factory default)</li> <li>1 - enables extended network survey; all the network survey execution commands (#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC) display the BAList for every valid scanned BCCh carrier</li> <li>2 - enables extended network survey; all the network survey execution commands (#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC) display the BAList for every valid scanned BCCh carrier and, if GPRS is supported in the cell, they report some GPRS informations carried by the System Information 13 of the BCCh</li> </ul> <p>Note: if parameter is omitted the behaviour of Set command is the same as Read command.</p>	
AT#CSURVEXT?	Read command reports whether extended network survey is currently enabled or not, in the format:  <value>	
AT#CSURVEXT=?	Test command reports the range of values for parameter <value>.	

#CSURVEXT - Extended Network Survey		SELINT 2
AT#CSURVEXT [=<value>]	<p>Set command enables/disables extended network survey.</p> <p>Parameter:</p> <p>&lt;value&gt;</p> <ul style="list-style-type: none"> <li>0 - disables extended network survey (factory default)</li> <li>1 - enables extended network survey; all the network survey execution commands (#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC) display the BAList for every valid scanned BCCh carrier</li> <li>2 - enables extended network survey; all the network survey execution commands (#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC) display the BAList for every valid scanned BCCh carrier and, if GPRS is supported in the cell, they report some GPRS informations carried by the System Information 13 of the BCCh</li> </ul>	

#CSURVEXT - Extended Network Survey		SELINT 2
3 - enables more extended network survey; all the network survey execution commands (#CSURV, #CSURVC, #CSURVU, #CSURVUC, #CSURVB, #CSURVBC). It displays transmit power level, receiving level access min, Cell Reselection Offset, Penalty Time, T3212 Periodic Location Update Timer and Cell Reselection Offset		
AT#CSURVEXT?	Read command reports whether extended network survey is currently enabled or not, in the format:  <value>	
AT#CSURVEXT=?	Test command reports the range of values for parameter <value>.	

### 3.5.7.10.10. PLMN Network Survey - #CSURVP

#CSURVP - PLMN Network Survey		SELINT 2
AT#CSURVP=<plmn>	Execution command performs a quick network survey through channels. The survey stops as soon as a BCCH carriers belonging to the selected PLMN is found.  The result format is like command #CSURV.  Parameter: <plmn> - the desired PLMN in numeric format	
AT#CSURVP=?	Test command returns OK	

### 3.5.7.10.11. PLMN Network Survey (Numeric Format) - #CSURVPC

#CSURVPC - PLMN Network Survey (Numeric Format)		SELINT 2
AT#CSURVPC=<plmn>	Execution command performs a quick network survey through channels. The survey stops as soon as a BCCH carriers belonging to the selected PLMN is found.  The result is given in numeric format and is like command #CSURVC.  Parameter: <plmn> - the desired PLMN in numeric format	
AT#CSURVPC=?	Test command returns OK	

### 3.5.7.11. SIM Toolkit AT Commands

#### 3.5.7.11.1. SIM Toolkit Interface Activation - #STIA

#STIA - SIM Toolkit Interface Activation	SELINT 2
--	----------

#STIA - SIM Toolkit Interface Activation	SELINT 2
<b>AT#STIA=</b> <b>[&lt;mode&gt;</b> <b>[,&lt;timeout&gt;]]</b>	<p>Set command is used to activate the SAT sending of unsolicited indications when a <b>proactive command</b> is received from SIM.</p> <p>Parameters:</p> <p><b>&lt;mode&gt;</b></p> <ul style="list-style-type: none"> <li>0 - disable SAT (default for all products, except GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL868-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GE910-QUAD and GE910-GNSS)</li> <li>1 - enable SAT without unsolicited indication #STN (default for GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL868-DUAL, GL865-QUAD, GL865-DUAL V3, GL868-DUAL V3, GE910-QUAD and GE910-GNSS)</li> <li>2 - enable SAT and extended unsolicited indication #STN (see #STGI)</li> <li>3 - enable SAT and reduced unsolicited indication #STN (see #STGI)</li> <li>17 - enable SAT without unsolicited indication #STN and 3GPP TS 23.038 alphabet used</li> <li>18 - enable SAT and extended unsolicited indication #STN (see #STGI) and 3GPP TS 23.038 alphabet used</li> <li>19 - enable SAT and reduced unsolicited indication #STN (see #STGI) and 3GPP TS 23.038 alphabet used</li> <li>33 - enable SAT without unsolicited indication #STN and UCS2 alphabet used</li> <li>34 - enable SAT and extended unsolicited indication #STN (see #STGI) and UCS2 alphabet used</li> <li>35 - enable SAT and reduced unsolicited indication #STN (see #STGI) and UCS2 alphabet used</li> </ul> <p><b>&lt;timeout&gt;</b> - time-out for user responses</p> <p>1..255 - time-out in minutes (default 10). Any ongoing (but unanswered) <b>proactive command</b> will be aborted automatically after &lt;timeout&gt; minutes. In this case, the terminal response is either “ME currently unable to process command”, or if applicable, “No response from user”. In addition an unsolicited indication will be sent to the external application:</p> <p><b>#STN: &lt;cmdTerminateValue&gt;</b></p> <p>where:</p> <p>&lt;cmdTerminateValue&gt; is defined as &lt;cmdType&gt; + terminate offset; the terminate offset equals 100.</p> <p>Note: every time the SIM application issues a <b>proactive command</b> that requires user interaction an unsolicited code will be sent, if enabled with #STIA command, as follows:</p> <ul style="list-style-type: none"> <li>• if &lt;mode&gt; parameter of #STIA command has been set to 3 (reduced unsolicited indication) an unsolicited indication will be sent, indicating the type of <b>proactive command</b> issued by the SIM:</li> </ul>

#STIA - SIM Toolkit Interface Activation	SELINT 2
--	----------

#STN: <cmdType>

- if <mode> parameter of #STIA command has been set to 2 (extended unsolicited indication) the format of the unsolicited indication depends on the specific command:

*if <cmdType>=1 (REFRESH)*

an unsolicited notification will be sent to the user:

#STN: <cmdType>,<refresh type>

where:

<refresh type>

- 0 - SIM Initialization and Full File Change Notification;
- 1 - File Change Notification;
- 2 - SIM Initialization and File Change Notification;
- 3 - SIM Initialization;
- 4 - SIM Reset

In this case neither #STGI nor #STSR commands are required:

- AT#STGI is accepted anyway.
- AT#STSR=<cmdType>,0 will answer OK but do nothing.

*if <cmdType>=17 (SEND SS)  
if <cmdType>=19 (SEND SHORT MESSAGE)  
if <cmdType>=20 (SEND DTMF)  
if <cmdType>=32 (PLAY TONE)*

an unsolicited notification will be sent if allowed by SIM (see GSM 11.14):

#STN: <cmdType>[,<text>]

where:

<text> - (optional) text to be displayed to user

In these cases neither #STGI nor #STSR commands are required:

- AT#STGI is accepted anyway.
- AT#STSR=<cmdType>,0 will answer OK but do nothing.

In case of SEND SHORT MESSAGE (<cmdType>=19) command if sending to network fails an unsolicited notification will be sent

#STIA - SIM Toolkit Interface Activation	SELINT 2
	#STN: 119
	<p style="text-align: center;"><i>if &lt;cmdType&gt;=33 (DISPLAY TEXT)</i></p> <p>an unsolicited notification will be sent if allowed by SIM (see GSM 11.14):</p> <p><b>#STN: &lt;cmdType&gt;[,&lt;cmdDetails&gt;[,&lt;text&gt;]</b></p> <p>where:</p> <p>&lt;cmdDetails&gt; - unsigned Integer used as a bit field. 0..255 - used as a bit field:</p> <p><b>bit 1:</b> 0 - normal priority 1 - high priority</p> <p><b>bits 2 to 7:</b> reserved for future use</p> <p><b>bit 8:</b> 0 - clear message after a delay 1 - wait for user to clear message</p> <p>&lt;text&gt; - (optional) text to be displayed to user</p>
	<p>In this case:</p> <ol style="list-style-type: none"> <li>1. if &lt;cmdDetails&gt;/bit8 is 0 neither #STGI nor #STSR commands are required: <ul style="list-style-type: none"> <li>• AT#STGI is accepted anyway.</li> <li>• AT#STSR=&lt;cmdType&gt;,0 will answer <b>OK</b> but do nothing.</li> </ul> </li> <li>2. If &lt;cmdDetails&gt;/bit8 is 1 #STSR command is required</li> </ol>
	<p style="text-align: center;"><i>if &lt;cmdType&gt;=40 (SET UP IDLE MODE TEXT)</i></p> <p>an unsolicited notification will be sent:</p> <p><b>#STN: &lt;cmdType&gt;[,&lt;text&gt;]</b></p> <p>where:</p> <p>&lt;text&gt; - (optional) text to be displayed to user</p>
	<p>In these cases neither #STGI nor #STSR commands are required:</p> <ul style="list-style-type: none"> <li>• AT#STGI is accepted anyway.</li> <li>• AT#STSR=&lt;cmdType&gt;,0 will answer <b>OK</b> but do nothing.</li> </ul>
	<p style="text-align: center;"><i>if &lt;cmdType&gt;=18 (SEND USSD)</i></p> <p>an unsolicited notification will be sent to the user:</p>

## #STIA - SIM Toolkit Interface Activation

**SELINT 2**

**#STN: <cmdType>[,<text>]**

where:

<text> - optional text string sent by SIM

In this case:

- **AT#STSR=18,20** can be sent to end USSD transaction.
- **AT#STGI** is accepted anyway.
- **AT#STSR=<cmdType>,0** will answer **OK** but do nothing.

*if <cmdType>=5 (SET UP EVENT LIST)*

an unsolicited notification will be sent:

**#STN: <cmdType>[,<event list mask>]**

where:

<event list mask> - (optional)hexadecimal number representing the list of events to monitor (see GSM 11.14)

- '00' = MT call
- '01' = Call connected
- '02' = Call disconnected
- '03' = Location status
- '04' = User activity
- '05' = Idle screen available
- '06' = Card reader status (if class "a" is supported)
- '07' = Language selection
- '08' = Browser Termination (if class "c" is supported)
- '09' = Data available (if class "e" is supported)
- '0A' = Channel status (if class "e" is supported)

The hexadecimal number is actually a bit mask, where each bit, when set, indicates that the corresponding event has to be monitored (e.g., if <event list mask> is 0x0001, it means that MT call has to be monitored).

In these cases neither #STGI nor #STSR commands are required:

- **AT#STGI** is accepted anyway.
- **AT#STSR=<cmdType>,0** will answer **OK** but do nothing.

All other commands:

the unsolicited indication will report just the proactive command type:

**#STN: <cmdType>**

#STIA - SIM Toolkit Interface Activation	SELINT 2
	<p>Note: if the <b>call control or SMS control facility in the SIM</b> is activated, when the customer application makes an outgoing call, or sends an SS or USSD, or an SMS, the following #STN unsolicited indication could be sent, according to GSM 11.14, to indicate whether the outgoing call has been accepted, rejected or modified by the SIM, or if the SMS service centre address or destination has been changed:</p> <p><b>#STN: &lt;cmdTerminateValue&gt;,&lt;Result&gt;[,&lt;TextInfo&gt;[,&lt;Number&gt;[,&lt;MODestAddr&gt;]]]</b></p> <p>where</p> <p>&lt;cmdTerminateValue&gt;      150 - SMS control response      160 - call/SS/USSD response</p> <p>&lt;Result&gt;      0 - Call/SMS not allowed      1 - Call/SMS allowed      2 - Call/SMS allowed with modification</p> <p>&lt;Number&gt; - Called number, Service Center Address or SS String in ASCII format.</p> <p>&lt;MODestAddr&gt; - MO destination address in ASCII format.</p> <p>&lt;TextInfo&gt; - alpha identifier provided by the SIM in ASCII format.</p> <p>Note: an unsolicited result code</p> <p><b>#STN: 254</b></p> <p>is sent if the user has indicated the need to end the proactive SIM application session (<b>AT#STS=cmdType</b>,16 i.e. “proactive SIM application session terminated by the user” according to GSM 11.14).</p> <p>The TA does not need to respond directly, i.e. <b>AT#STS</b> is not required.      It is possible to restart the SAT session from the main menu again with the command <b>AT#STGI=37</b>.</p> <p>Note: The settings are saved on user profile and available on following reboot. SIM Toolkit activation/deactivation is only performed at power on.</p> <p>Note: from version 10.0x.xx4 the set command returns ERROR when USIM is enabled (AT#ENAUSIM? returns 1).</p>
<b>AT#STIA?</b>	<p>Read command can be used to get information about the SAT interface in the format:</p> <p><b>#STIA: &lt;state&gt;,&lt;mode&gt;,&lt;timeout&gt;,&lt;SatProfile&gt;</b></p>

#STIA - SIM Toolkit Interface Activation	SELINT 2
	<p>where:</p> <p>&lt;state&gt; - the device is in one of the following state:          0 - SIM has not started its application yet          1 - SIM has started its application (SAT main menu ready)</p> <p>&lt;mode&gt; - SAT and unsolicited indications enabling status (see above)</p> <p>&lt;timeout&gt; - time-out for user responses (see above)</p> <p>&lt;SatProfile&gt; - SAT Terminal Profile according to GSM 11.14, i. e. the list of SIM Application Toolkit facilities that are supported by the ME. The profile cannot be changed by the TA.</p> <p>Note: In SAT applications usually an SMS message is sent to the network provider containing service requests, e.g. to send the latest news. The provider returns a message with the requested information.          Before activating SAT it is recommended to set the SMS text mode with command <b>AT+CMGF=1</b> and to enable unsolicited indications for incoming SMS messages with command <b>+CNMI</b>.</p>
AT#STIA=?	Test command returns the range of available values for the parameters <mode> and <timeout>.
Note	Just one instance at a time, the one which first issued <b>AT#STIA=n</b> (with <b>n</b> different from zero), is allowed to issue SAT commands, and this is valid till the same instance issues <b>AT#STIA=0</b> . After power cycle another instance can enable SAT.
Note	A typical SAT session on AT interface starts after an #STN: 37 unsolicited code is received, if enabled(see above). At that point usually an <b>AT#STGI=37</b> command is issued (see #STGI), and after the SAT main menu has been displayed on TE an <b>AT#STSRI=37,0,x</b> command is issued to select an item in the menu (see #STSRI).

### 3.5.7.11.2. SIM Toolkit Get Information - #STGI

#STGI - SIM Toolkit Get Information	SELINT 2
AT#STGI=[<cmdType>]	<p>#STGI set command is used to request the parameters of a <b>proactive command</b> from the ME.</p> <p>Parameter:</p> <p>&lt;cmdType&gt; - <b>proactive command</b> ID according to GSM 11.14 (decimal); these are only those command types that use the AT interface; SAT commands which are not using the AT interface (not MMI related SAT commands, e.g. PROVIDE LOCAL INFORMATION) are executed without sending any indication to the user</p> <p>1 - REFRESH</p>

#STGI - SIM Toolkit Get Information	SELINT 2
<p>5 – SET UP EVENT LIST      16 - SET UP CALL      17 - SEND SS      18 - SEND USSD      19 - SEND SHORT MESSAGE      20 - SEND DTMF      32 - PLAY TONE      33 - DISPLAY TEXT      34 - GET INKEY      35 - GET INPUT      36 - SELECT ITEM      37 - SET UP MENU      40 – SET UP IDLE MODE TEXT</p> <p>Requested command parameters are sent using an #STGI indication:</p> <p><b>#STGI: &lt;parameters&gt;</b></p> <p>where &lt;parameters&gt; depends upon the ongoing <b>proactive command</b> as follows:</p> <p style="text-align: center;"><i>if &lt;cmdType&gt;=1 (REFRESH)</i></p> <p><b>#STGI: &lt;cmdType&gt;,&lt;refresh type&gt;</b></p> <p>where:</p> <p><b>&lt;refresh type&gt;</b></p> <p>0 - SIM Initialization and Full File Change Notification;      1 - File Change Notification;      2 - SIM Initialization and File Change Notification;      3 - SIM Initialization;      4 - SIM Reset</p> <p style="text-align: center;"><i>if &lt;cmdType&gt;=5 (SET UP EVENT LIST)</i></p> <p><b>#STGI: &lt;cmdType&gt;,&lt;event list mask&gt;</b></p> <p>where:</p> <p><b>&lt;event list mask&gt;</b> - hexadecimal number representing the list of events to monitor (see GSM 11.14):</p> <ul style="list-style-type: none"> <li>- '00' = MT call</li> <li>- '01' = Call connected</li> <li>- '02' = Call disconnected</li> <li>- '03' = Location status</li> <li>- '04' = User activity</li> <li>- '05' = Idle screen available</li> <li>- '06' = Card reader status (if class "a" is supported)</li> </ul>

#STGI - SIM Toolkit Get Information	SELINT 2
	<p>0 - No selection preference      1 - Selection using soft key preferred</p> <p><b>bits 4 to 7:</b>      0</p> <p><b>bit 8:</b>      0 - No help information available      1 - Help information available</p> <p>&lt;numOfItems&gt; - number of items in the list  &lt;titleText&gt; - string giving menu title  &lt;itemId&gt; - item identifier      1..&lt;numOfItems&gt;  &lt;itemText&gt; - title of item  &lt;nextActionId&gt; - the next proactive command type to be issued upon execution of the menu item.      0 - no next action information available.</p> <p style="text-align: center;"><i>if &lt;cmdType&gt;=37 (SET UP MENU)</i></p> <p>The first line of output is:</p> <p><b>#STGI: &lt;cmdType&gt;,&lt;commandDetails&gt;,&lt;numOfItems&gt;,&lt;titleText&gt;&lt;CR&gt;&lt;LF&gt;</b></p> <p>One line follows for every item, repeated for &lt;numOfItems&gt;:</p> <p><b>#STGI: &lt;cmdType&gt;,&lt;itemId&gt;,&lt;itemText&gt;[,&lt;nextActionId&gt;]</b></p> <p>where:  &lt;commandDetails&gt; - unsigned Integer used as a bitfield      0..255 - used as a bit field:</p> <p><b>bit 1:</b>      0 - no selection preference      1 - selection using soft key preferred</p> <p><b>bit 2 to 7:</b>      0</p> <p><b>bit 8:</b>      0 - no help information available      1 - help information available</p> <p>&lt;numOfItems&gt; - number of items in the list  &lt;titleText&gt; - string giving menu title  &lt;itemId&gt; - item identifier      1..&lt;numOfItems&gt;  &lt;itemText&gt; - title of item  &lt;nextActionId&gt; - the next proactive command type to be issued upon execution of the menu item.</p>

#STGI - SIM Toolkit Get Information	SELINT 2
	<p>0 - no next action information available.</p> <p>Note: upon receiving the #STGI response, the TA must send #STSR command (see below) to confirm the execution of the proactive command and provide any required user response, e.g. selected menu item.</p>
AT#STGI?	<p>The read command can be used to request the currently ongoing <b>proactive command</b> and the SAT state in the format</p> <p><b>#STGI: &lt;state&gt;,cmdType&gt;</b>  where:  &lt;state&gt; - SAT interface state (see #STIA)  &lt;cmdType&gt; - ongoing proactive command</p> <p>An error message will be returned if there is no pending command.</p>
AT#STGI=?	<p>Test command returns the range for the parameters &lt;state&gt; and &lt;cmdType&gt;.</p>
Note	<p>The unsolicited notification sent to the user:</p> <p><b>#STN: 37</b></p> <p>is an indication that the main menu of the SIM Application has been sent to the TA. It will be stored by the TA so that it can be displayed later at any time by issuing an <b>AT#STGI=37</b> command.</p> <p>A typical SAT session on AT interface starts after an <b>#STN: 37</b> unsolicited code is received, if enabled. At that point usually an <b>AT#STGI=37</b> command is issued, and after the SAT main menu has been displayed on TE an <b>AT#STSR=37,0,x</b> command is issued to select an item in the menu (see below). The session usually ends with a SIM action like sending an SMS, or starting a call. After this, to restart the session from the beginning going back to SAT main menu it is usually required an <b>AT#STSR=37,16</b> command.</p> <p>The unsolicited notification sent to the user:</p> <p><b>#STN:237</b></p> <p>is an indication that the main menu of the SIM Application has been removed from the TA, and it is no longer available. In this case <b>AT#STGI=37</b> command response will be always <b>ERROR</b>.</p>

### 3.5.7.11.3. SIM Toolkit Send Response - #STSR

#STSR - SIM Toolkit Send Response	SELINT 2
AT#STSR=<cmdType>,	The write command is used to provide to SIM user response to a command and any required user information, e.g. a selected menu item.

#STSRI - SIM Toolkit Send Response	SELINT 2
<p>&lt;userResponse&gt; [,&lt;data&gt;]]</p> <p>Parameters:</p> <p>&lt;cmdType&gt; - integer type; <b>proactive command</b> ID according to GSM 11.14 (see #STGI)</p> <p>&lt;userResponse&gt; - action performed by the user</p> <ul style="list-style-type: none"> <li>0 - command performed successfully (call accepted in case of call setup)</li> <li>16 - proactive SIM session terminated by user</li> <li>17 - backward move in the proactive SIM session requested by the user</li> <li>18 - no response from user</li> <li>19 - help information required by the user</li> <li>20 - USSD/SS Transaction terminated by user</li> <li>32 - TA currently unable to process command</li> <li>34 - user has denied SIM call setup request</li> <li>35 - user cleared down SIM call before connection or network release</li> </ul> <p>&lt;data&gt; - data entered by user, depending on &lt;cmdType&gt;, only required if &lt;Result&gt; is 0:</p> <p><b>Get Inkey</b></p> <p>&lt;data&gt; contains the key pressed by the user; used character set should be the one selected with +CSCS.</p> <p>Note: if, as a user response, a binary choice (Yes/No) is requested by the SIM application using bit 3 of the &lt;commandDetails&gt; parameter the valid content of the &lt;inputString&gt; is:</p> <ul style="list-style-type: none"> <li>a) "IRA", "8859-1", "PCCP437" charsets: "Y" or "y" (positive answer) and "N" or "n" (negative answer)</li> <li>b) UCS2 alphabet "0079" or "0059" (positive answer) and "006E" or "004E" (negative answer)</li> </ul> <p><b>Get Input</b></p> <p>&lt;data&gt; - contains the string of characters entered by the user (see above)</p> <p><b>Select Item</b></p> <p>&lt;data&gt; - contains the item identifier selected by the user</p> <p>Note: Use of icons is not supported. All icon related actions will respond with no icon available.</p>	
AT#STSRI?	<p>The read command can be used to request the currently ongoing <b>proactive command</b> and the SAT state in the format</p> <p><b>#STSRI: &lt;state&gt;,&lt;cmdType&gt;</b> where:</p> <p>&lt;state&gt; - SAT interface state (see #STIA) &lt;cmdType&gt; - ongoing proactive command</p> <p>An error message will be returned if there is no pending command.</p>

<b>#STSRS - SIM Toolkit Send Response</b>	<b>SELINT 2</b>
<b>AT#STSRS=?</b>	Test command returns the range for the parameters <state> and <cmdType>.

### 3.5.7.11.4. SIM Toolkit terminal Attach - #STTA

<b>#STTA - SIM Toolkit Terminal Attach</b>	<b>SELINT 2</b>
<b>AT#STTA=&lt;state&gt;</b>	This command attaches/detaches the SIM Toolkit application to the AT instance reserved for this use.  Parameters: <state>: attached state 0 – SIM Toolkit detaches 1 – SIM Toolkit attaches  If SIM Toolkit application has been already attached/detached the command does nothing and returns OK.
<b>AT#STTA?</b>	Read command reports the current <state> in the format: <b>#STTA: &lt;state&gt;</b>
<b>AT#STTA=?</b>	Test command reports the supported range of values for parameter <state>
<b>Note</b>	The AT instance reserved for the SIM Toolkit application is the #3.  Issuing AT#STTA=<state> when the AT instance has been already attached to another service (CMUX, SMSATRUN/TCPATRUN, OTA) causes an ERROR result code to be returned.

### 3.5.7.12. Jammed Detect & Report AT Commands

#### 3.5.7.12.1. Jammed Detect & Report - #JDR

<b>#JDR - Jammed Detect &amp; Report</b>	<b>SELINT 0 / 1</b>
<b>AT#JDR[= &lt;mode&gt; [,&lt;MNPL&gt;, &lt;DCMN&gt;]]</b>	Set command allows to control the Jammed Detect & Report feature.  The MODULE can detect if a communication Jammer is active in its range and give indication to the user of this condition either on the serial line with an unsolicited code or on a dedicated GPIO by rising it.  Parameters: <mode> - behaviour mode of the Jammed Detect & Report 0 - disables Jammed Detect & Report (factory default) 1 - enables the Jammed Detect; the Jammed condition is reported on pin GPIO2/JDR GPIO2/JDR Low - Normal Operating Condition

#JDR - Jammed Detect & Report	SELINT 0 / 1
	<p><b>GPIO2/JDR High</b> - Jammed Condition.</p> <p>2 - enables the Jammed Detect; the Jammed condition is reported with a single unsolicited result code on serial line, in the format:</p> <p><b>#JDR: &lt;status&gt;</b>  where:  <b>&lt;status&gt;</b>  JAMMED - Jammed condition detected  OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred.</p> <p>3 - enables the Jammed Detect; the MODULE will make both the actions as for <b>&lt;mode&gt;=1</b> and <b>&lt;mode&gt;=2</b>.</p> <p>4 - enables the Jammed Detect; the Jammed condition is reported with an unsolicited code every 3s on serial line, in the format:</p> <p><b>#JDR: &lt;status&gt;</b>  where:  <b>&lt;status&gt;</b>  JAMMED - Jammed condition detected  OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred.</p> <p>5 - enables the Jammed Detect; the MODULE will make both the actions as for <b>&lt;mode&gt;=1</b> and <b>&lt;mode&gt;=4</b>.</p> <p><b>&lt;MNPL&gt;</b> - Maximum Noise Power Level  0..127 (factory default is 70)</p> <p><b>&lt;DCMN&gt;</b> - Disturbed Channel Minimum Number  0..254 (factory default is 5)</p> <p>Note: issuing <b>AT#JDR&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT#JDR=&lt;CR&gt;</b> is the same as issuing the command <b>AT#JDR=0&lt;CR&gt;</b>.</p>
<b>AT#JDR?</b>	Read command reports the current behaviour mode, Maximum Noise Power Level and Disturbed Channel Minimum Number, in the format:
	<b>#JDR: &lt;mode&gt;,&lt;MNPL&gt;,&lt;DCMN&gt;</b>
<b>AT#JDR=?</b>	Test command reports the supported range of values for the parameters <b>&lt;mode&gt;</b> , <b>&lt;MNPL&gt;</b> and <b>&lt;DCMN&gt;</b>
Example	<pre>AT#JDR=2 OK ...jammer enters in the range... #JDR: JAMMED ...jammer exits the range...</pre>

<b>#JDR - Jammed Detect &amp; Report</b>		<b>SELINT 0 / 1</b>
#JDR: OPERATIVE		
Note	If the device is installed in a particular environment where the default values are not satisfactory the two parameters <MNPL> and <DCMN> permit to adapt the detection to all conditions.	

<b>#JDR - Jammed Detect &amp; Report</b>		<b>SELINT 2</b>
AT#JDR= [<mode> [,<MNPL>, <DCMN>]]	<p>Set command allows to control the Jammed Detect &amp; Report feature.</p> <p>The MODULE can detect if a communication Jammer is active in its range and give indication to the user of this condition either on the serial line with an unsolicited code or on a dedicated GPIO by rising it.</p> <p>Parameters:</p> <p>&lt;mode&gt; - behaviour mode of the Jammed Detect &amp; Report</p> <ul style="list-style-type: none"> <li>0 - disables Jammed Detect &amp; Report (factory default)</li> <li>1 - enables the Jammed Detect; the Jammed condition is reported on pin GPIO2/JDR           <ul style="list-style-type: none"> <li>GPIO2/JDR Low - Normal Operating Condition</li> <li>GPIO2/JDR High - Jammed Condition.</li> </ul> </li> <li>2 - enables the Jammed Detect; the Jammed condition is reported with a single unsolicited result code on serial line, in the format:</li> </ul> <p><b>#JDR: &lt;status&gt;</b></p> <p>where:</p> <p>&lt;status&gt;</p> <ul style="list-style-type: none"> <li>JAMMED - Jammed condition detected</li> <li>OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred.</li> </ul> <ul style="list-style-type: none"> <li>3 - enables the Jammed Detect; the MODULE will make both the actions as for &lt;mode&gt;=1 and &lt;mode&gt;=2.</li> <li>4 - enables the Jammed Detect; the Jammed condition is reported with an unsolicited code every 3s on serial line, in the format:</li> </ul> <p><b>#JDR: &lt;status&gt;</b></p> <p>where:</p> <p>&lt;status&gt;</p> <ul style="list-style-type: none"> <li>JAMMED - Jammed condition detected</li> <li>OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred.</li> </ul> <ul style="list-style-type: none"> <li>5 - enables the Jammed Detect; the MODULE will make both the actions as for &lt;mode&gt;=1 and &lt;mode&gt;=4.</li> <li>6 - enables the Jammed Detect (this value is available only for 10.00.xxx release); the Jammed condition is reported in the format:</li> </ul> <p><b>#JDR: &lt;status&gt;</b></p>	

#JDR - Jammed Detect & Report	SELINT 2
	<p>where:</p> <p>&lt;status&gt;</p> <p>JAMMED - Jammed condition detected</p> <p>OPERATIVE - Normal Operating condition restored. This code will be shown only after a jammed condition has occurred</p> <p>UNKNOWN – default state before first successful PLMN searching</p> <p>&lt;MNPL&gt; - Maximum Noise Power Level 0..127 (factory default is 70)</p> <p>&lt;DCMN&gt; - Disturbed Channel Minimum Number 0..254 (factory default is 5)</p>
AT#JDR?	Read command reports the current behaviour mode, Maximum Noise Power Level and Disturbed Channel Minimum Number, in the format:  <b>#JDR: &lt;mode&gt;,&lt;MNPL&gt;,&lt;DCMN&gt;</b>
AT#JDR=?	Test command reports the supported range of values for the parameters <mode>, <MNPL> and <DCMN>
Example	<pre>AT#JDR=2 OK ...jammer enters in the range... #JDR: JAMMED ...jammer exits the range... #JDR: OPERATIVE  AT#JDR=6 #JDR: JAMMED //when jammed OK  AT#JDR=6 #JDR: OPERATIVE //when in normal operating mode OK  AT#JDR=6 #JDR: UNKNOWN // default state before 1st PLMN searching OK</pre>
Note	If the device is installed in a particular environment where the default values are not satisfactory the two parameters <MNPL> and <DCMN> permit to adapt the detection to all conditions.

### 3.5.7.12.2. Jammed detect and report enhanced - #JDRENH

#JDRENH – Enhanced Jamming Detection and Reporting	SELINT 2
AT#JDRENH[=<type>[,<mod e>[,<Param1>[,<Param2>[,<T imer>]]]]]	<p>Set command allows to control the Enhanced Jamming Detection &amp; Reporting feature, that can be considered an extension of AT#JDR.</p> <p>Parameters:</p> <p>&lt;type&gt; - Jamming Reporting Type</p>

0 - Disable the feature (factory default).

1 - Enable the JDRE; jamming condition is reported on pin GPIO2/JDR.

    GPIO/JDR **Low** – Normal Operating Condition.  
    GPIO/JDR **High** – Jammed Condition.

2 - Enable the JDRE; jamming condition is reported with a single unsolicited result code on serial port, in the format:

**#JDRENH: <status>**

Where:

<**status**>

**JAMMED** – Jammed condition detected

**OPERATIVE** – Normal Operating condition restored. This code will be shown only after a jammed condition has occurred.

3 - Enable the JDRE; the MODULE will execute both actions as for <**type**>=1 and <**type**>=2.

4 - Enable the JDRE; jamming condition is reported with an unsolicited code every 3s on serial port, in format:

**#JDRENH: <status>**

Where:

<**status**>

**JAMMED** – Jammed condition detected

**OPERATIVE** – Normal Operating condition restored. This code will be shown only after a jammed condition has occurred.

5 - Enable the JDRE; the MODULE will execute both actions as for <**type**>=1 and <**type**>=4.

<**mode**> - This parameter sets the method to be used to detect the jamming condition

1 - Method 1 – Counter of Disturbed Channels for band  
2 - Method 2 – Sudden variation of the signal strength

<**Param1**> - The meaning of this parameter depends by the selected <**mode**>.

When <**mode**>=1, <**Param1**> is used to set the minimum number of Disturbed Channels, for Band, to be considered to measure the jamming condition. Range 1-50, default value 10.

	<p>When <b>&lt;mode&gt;=2</b>, <b>&lt;Param1&gt;</b> is used to set the value of the minimum variation of received signal strength of the channel, in negative dBm, to be considered to measure the jamming condition. Range 1-20, default value 5.</p> <p><b>&lt;Param2&gt;</b> - The meaning of this parameter depends by the selected <b>&lt;mode&gt;</b>.</p> <p>When <b>&lt;mode&gt;=1</b>, <b>&lt;Param2&gt;</b> is used to set the maximum noise level, in negative dBm, to do not consider the bad channel decoding like a jamming condition. Range 35 – 127, default value 110.</p> <p>When <b>&lt;mode&gt;=2</b>, <b>&lt;Param2&gt;</b> is used to set the minimum number of Disturbed Channels to be considered to measure the jamming condition situation. Range 1 - 20, default value 5.</p> <p><b>&lt;Time&gt;</b> - This parameter sets, for both methods, the Jamming Reporting timer. The timer <b>&lt;Time&gt;</b> starts when the jamming condition is detected; when the timer expires, if the jamming condition is still true, the jamming is notified.          1 – 254 (default 10)          255 - jamming is notified, if required, only at the end of the scan of all the powerful channels</p>
<b>AT#JDRENH?</b>	Read command reports the current parameter settings for <b>#JDRENH</b> in the format:  <b>#JDRENH: &lt;type&gt;,&lt;mode&gt;,&lt;Param1&gt;,&lt;Param2&gt;,&lt;Time&gt;</b>
<b>AT#JDRENH=?</b>	Test command reports the supported range of values for parameters <b>&lt;type&gt;,&lt;mode&gt;,&lt;Param1&gt;,&lt;Param2&gt;,&lt;Time&gt;</b>

### 3.5.7.13. Easy Script® Extension - Python<sup>27</sup> Interpreter, AT Commands

#### 3.5.7.13.1. Write Script - #WSCRIPT

<b>#WSCRIPT - Write Script</b>		<b>SELINT 0 / 1</b>
<b>AT#WSCRIPT=</b> <b>&lt;script_name&gt;,</b> <b>&lt;size&gt;</b> <b>[,&lt;hidden&gt;]</b>	Execution command causes the MODULE to store a file in the Easy Script® related NVM, naming it <b>&lt;script_name&gt;</b>	<p>The file should be sent using RAW ASCII file transfer.          It is important to set properly the port settings. In particular:  <b>Flow control: hardware.</b>  <b>Baud rate: 115200 bps</b></p>

<sup>27</sup> PYTHON is a registered trademark of the Python Software Foundation.

#WSRIPT - Write Script	SELINT 0 / 1
	<p>Parameters:</p> <p>&lt;script_name&gt; - name of the file in NVM, string type (max 16 chars, case sensitive).</p> <p>&lt;size&gt; - file size in bytes</p> <p>&lt;hidden&gt; - file hidden attribute</p> <p>0 - file content is readable with #RSCRIPT (default).</p> <p>1 - file content is hidden, #RSCRIPT command will report empty file.</p> <p>The device shall prompt a three character sequence  <b>&lt;greater_than&gt;&lt;greater_than&gt;&lt;greater_than&gt;</b>  <b>(IRA 62, 62, 62)</b></p> <p>after command line is terminated with &lt;CR&gt;; after that a file can be entered from TE, sized &lt;size&gt; bytes.</p> <p>The operations completes when all the bytes are received.</p> <p>If writing ends successfully, the response is <b>OK</b>; otherwise an error code is reported.</p> <p>Note: the file name should be passed between quotes; every textual script file must have <b>.py</b> extension, whilst every pre-compiled executable script file must have <b>.pyo</b> extension; file names are case sensitive.</p> <p>Note: when sending the script be sure that the line terminator is &lt;CR&gt;&lt;LF&gt; and that your terminal program does not change it.</p> <p>Note: with the hidden attribute it is possible to protect your files from being viewed and copied, only the file name can be viewed, its content is hidden even if the file is still being run correctly. It's your care to maintain knowledge on what the file contains.</p>
<b>AT#WSRIPT=?</b>	Test command returns <b>OK</b> result code.
Example	<p>AT#WSRIPT="First.py ",54,0</p> <p>&gt;&gt;&gt; here receive the prompt: depending on your editor settings it's possible that the prompt overrides the above line; then type or send the script, sized 54 bytes</p> <p>OK</p> <p>Script has been stored.</p>
Note	It's recommended to use the extension <b>.py</b> only for textual script files and the extension <b>.pyo</b> only for pre-compiled executable script files.

#WSRIPT - Write Script	SELINT 2
<b>AT#WSRIPT=</b> <b>[&lt;script_name&gt;,</b> <b>&lt;size&gt;,</b> <b>[,&lt;hidden&gt;]]</b>	<p>Execution command causes the MODULE to store a file in the Easy Script® related NVM, naming it &lt;script_name&gt;</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;">                     The file should be sent using RAW ASCII file transfer.                      It is important to set properly the port settings. In particular:                 </div>

#WSRIPT - Write Script	SELINT 2
	<b>Flow control: hardware.</b> <b>Baud rate: 115200 bps</b>
	<p>Parameters:</p> <p>&lt;script_name&gt; - name of the file in NVM, string type (max 16 chars, case sensitive).</p> <p>&lt;size&gt; - file size in bytes</p> <p>&lt;hidden&gt; - file hidden attribute</p> <p>0 - file content is readable with #RSCRIPT (default).</p> <p>1 - file content is hidden, #RSCRIPT command will report empty file.</p> <p>The device shall prompt a five character sequence  <b>&lt;CR&gt;&lt;LF&gt;&lt;greater_than&gt;&lt;greater_than&gt;&lt;greater_than&gt;</b>  <b>(IRA 13, 10, 62, 62, 62)</b></p> <p>after command line is terminated with &lt;CR&gt;; after that a file can be entered from TE, sized &lt;size&gt; bytes.</p> <p>The operations completes when all the bytes are received.</p> <p>If writing ends successfully, the response is <b>OK</b>; otherwise an error code is reported.</p> <p>Note: the file name should be passed between quotes; every textual script file must have <b>.py</b> extension, whilst every pre-compiled executable script file must have <b>.pyo</b> extension; file names are case sensitive.</p> <p>Note: when sending the script be sure that the line terminator is &lt;CR&gt;&lt;LF&gt; and that your terminal program does not change it.</p> <p>Note: with the hidden attribute it is possible to protect your files from being viewed and copied, only the file name can be viewed, its content is hidden even if the file is still being run correctly. It's your care to maintain knowledge on what the file contains.</p>
<b>AT#WSRIPT=?</b>	Test command returns <b>OK</b> result code.
Example	<pre>AT#WSRIPT="First.py ",54,0 &gt;&gt;&gt; here receive the prompt; then type or send the textual script, sized 54 bytes</pre> <p>OK</p> <p><i>Textual script has been stored</i></p>
Note	It's recommended to use the extension <b>.py</b> only for textual script files and the extension <b>.pyo</b> only for pre-compiled executable script files.

### 3.5.7.13.2. Select Active Script - #ESCRIPt

#ESCRIPt - Select Active Script		SELINT 0 / 1
AT#ESCRIPt[=<script_name>]	<p>Set command selects either</p> <ul style="list-style-type: none"> <li>a) the name of the textual script file that will be compiled and executed by the Easy Script® compiler at startup according to last #STARTMODESCR setting, or</li> <li>b) the name of the pre-compiled executable file that will be executed at startup according to last #STARTMODESCR setting.</li> </ul> <p>We call this file (either textual or pre-compiled) the <b>current script</b>.</p> <p>Parameter:          &lt;script_name&gt; - file name, string type (max 16 chars, case sensitive).</p> <p>Note: all textual script files must have .py extension; all pre-compiled executable files must have .pyo extension.</p> <p>Note: &lt;script_name&gt; must match to the name of a file written by #WSCRIPT in order to have it run.</p> <p>Note: the command does not check whether a textual script named &lt;script_name&gt; does exist or not in the Easy Script® related NVM. If the file &lt;script_name&gt; is not present at startup then the compiler will not execute.</p> <p>Note: issuing AT#ESCRIPt&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT#ESCRIPt=&lt;CR&gt; is the same as issuing the command AT#ESCRIPt=""&lt;CR&gt;.</p>	
AT#ESCRIPt?	Read command reports as a quoted string the file name of the <b>current script</b> .	
AT#ESCRIPt=?	Test command returns <b>OK</b> result code.	

#ESCRIPt - Select Active Script		SELINT 2
AT#ESCRIPt=<script_name>]	<p>Set command selects either</p> <ul style="list-style-type: none"> <li>c) the name of the textual script file that will be compiled and executed by the Easy Script® compiler at startup according to last #STARTMODESCR setting, or</li> <li>d) the name of the pre-compiled executable file that will be executed at startup according to last #STARTMODESCR setting.</li> </ul> <p>We call this file (either textual or pre-compiled) the <b>current script</b>.</p> <p>Parameter:          &lt;script_name&gt; - file name, string type (max 16 chars, case sensitive).</p> <p>Note: all textual script files must have .py extension; all pre-compiled executable files must have .pyo extension.</p>	

#ESCRIPT - Select Active Script		SELINT 2
Note: <script_name> must match to the name of a file written by #WSCRIPT in order to have it run.		
Note: the command does not check whether a textual script named <script_name> does exist or not in the Easy Script® related NVM. If the file <script_name> is not present at startup then the compiler will not execute.		
AT#ESCRIT?	Read command reports as a quoted string the file name of the <b>current script</b> .	
AT#ESCRIT=?	Test command returns <b>OK</b> result code.	

### 3.5.7.13.3. Script Execution Start Mode - #STARTMODESCR

#STARTMODESCR - Script Execution Start Mode		SELINT 0 / 1
AT#STARTMODESCR[= <script_start_mode> [,<script_start_to>]]	<p>Set command sets the <b>current script</b> (see #ESCRIT) execution start mode.</p> <p>Parameter:</p> <p>&lt;script_start_mode&gt; - <b>currente script</b> execution start mode</p> <p>0 - <b>current script</b> will be executed at startup only if the <b>DTR</b> line is found <b>Low</b> (that is: COM is not open on a PC), otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port (factory default).</p> <p>1 - <b>current script</b> will be executed at startup only if the user does not send any AT command on the serial port for the time interval specified in &lt;script_start_to&gt; parameter, otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port. The <b>DTR</b> line is not tested.</p> <p>2 - <b>current script</b> will be executed at startup in any case. <b>DTR</b> line and if the user does not send any AT command on the serial port have no influence on script execution. But AT command interface will be available on serial port ASC0 and connected to third AT parser instance. See "Easy Script in Python" document for further details on this execution start mode.</p> <p>&lt;script_start_to&gt; - <b>current script</b> start time-out;</p> <p>10..60 - time interval in seconds; this parameter is used only if parameter &lt;script_start_mode&gt; is set to 1; it is the waiting time for an AT command on the serial port to disable active script execution start. If the user does not send any AT command on the serial port for the time specified in this parameter active script will not be executed (default is 10).</p> <p>Note: issuing AT#STARTMODESCR&lt;CR&gt; is the same as issuing the Read command.</p>	
AT#STARTMODESCR?	<p>Read command reports the <b>current script</b> start mode and the <b>current script</b> start time-out, in the format:</p> <p>#STARTMODESCR= &lt;script_start_mode&gt;,&lt;script_start_timeout&gt;</p>	

#STARTMODESCR - Script Execution Start Mode		SELINT 0 / 1
<b>AT#STARTMODESCR=?</b>	<p>Test command returns the range of available values for parameters &lt;script_start_mode&gt; and &lt;script_start_timeout&gt;, in the format:</p> <p><b>#STARTMODESCR: (0-2),(10-60)</b></p> <p>In versions 13.00.xxx: <b>#STARTMODESCR: (0-1),(10-60)</b></p>	

#STARTMODESCR - Script Execution Start Mode		SELINT 2
<b>AT#STARTMODESCR=&lt;script_start_mode&gt;[,&lt;script_start_to&gt;]</b>	<p>Set command sets the <b>current script</b> (see #ESCRIT) execution start mode.</p> <p>Parameter:</p> <p>&lt;script_start_mode&gt; - <b>currente script</b> execution start mode</p> <p>0 - <b>current script</b> will be executed at startup only if the <b>DTR</b> line is found <b>Low</b> (that is: COM is not open on a PC), otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port (factory default).</p> <p>1 - <b>current script</b> will be executed at startup only if the user does not send any AT command on the serial port for the time interval specified in &lt;script_start_to&gt; parameter, otherwise the Easy Script® interpreter will not execute and the MODULE will behave normally answering only to AT commands on the serial port. The <b>DTR</b> line is not tested.</p> <p>2 - <b>current script</b> will be executed at startup in any case. <b>DTR</b> line and if the user does not send any AT command on the serial port have no influence on script execution. But AT command interface will be available on serial port ASC0 and connected to third AT parser instance. See "Easy Script in Python" document for further details on this execution start mode. Not available in versions 13.00.xxx.</p> <p>&lt;script_start_to&gt; - <b>current script</b> start time-out;</p> <p>10..60 - time interval in seconds; this parameter is used only if parameter &lt;script_start_mode&gt; is set to 1; it is the waiting time for an AT command on the serial port to disable active script execution start. If the user does not send any AT command on the serial port for the time specified in this parameter active script will not be executed (default is 10).</p>	
<b>AT#STARTMODESCR?</b>	Read command reports the <b>current script</b> start mode and the <b>current script</b> start time-out, in the format:	
<b>AT#STARTMODESCR=?</b>	<p>Test command returns the range of available values for parameters &lt;script_start_mode&gt; and &lt;script_start_timeout&gt;, in the format:</p> <p><b>#STARTMODESCR: (0-2),(10-60)</b></p>	

### 3.5.7.13.4. Execute Active Script - #EXECSCR

#EXECSCR - Execute Active Script		SELINT 0 / 1
AT#EXECSCR	Execution command causes the <b>current script</b> (see #ESCRIP) execution not at startup. This command is useful when the execution at startup has been blocked deliberately and the user wants to control execution start.	
AT#EXECSCR?	Read command has the same behaviour as execution command	
AT#EXECSCR=?	Test command returns <b>OK</b> result code.	

#EXECSCR - Execute Active Script		SELINT 2
AT#EXECSCR	Execution command causes the <b>current script</b> (see #ESCRIP) execution not at startup. This command is useful when the execution at startup has been blocked deliberately and the user wants to control execution start.	
AT#EXECSCR=?	Test command returns <b>OK</b> result code.	

### 3.5.7.13.5. Read Script - #RSCRIPT

#RSCRIPT - Read Script		SELINT 0 / 1
AT#RSCRIPT=<script_name>	Execution command reports the content of file <script_name>. Parameter: <script_name> - file name, string type (max 16 chars, case sensitive).  The device shall prompt a three character sequence <less_than><less_than><less_than> <b>(IRA 60, 60, 60)</b> followed by the file content.  Note: if the file <script_name> was saved with the hidden attribute, then an empty file is reported with the <b>OK</b> result code.  Note: If the file <script_name> is not present an error code is reported.	
AT#RSCRIPT=?	Test command returns <b>OK</b> result code.	
Example	AT#RSCRIPT="First.py " <i>hereafter receive the prompt: depending on your editor settings it's possible that the prompt overrides the above line; then the script is displayed, immediately after the prompt</i> <<<import MDM  MDM.send('AT\r',10) Ans=MDM.receive(20) OK	

#RSCRIPT - Read Script		SELINT 2
AT#RSCRIPT=[<script_name>]	Execution command reports the content of file <script_name>.  Parameter: <script_name> - file name, string type (max 16 chars, case sensitive).  The device shall prompt a five character sequence <CR><LF><less_than><less_than><less_than> <b>(IRA 13, 10, 60, 60)</b> followed by the file content.  Note: if the file <script_name> was saved with the hidden attribute, then an empty file is reported with the <b>OK</b> result code.  Note: If the file <script_name> is not present an error code is reported.	
AT#RSCRIPT=?	Test command returns <b>OK</b> result code.	
Example	AT#RSCRIPT="First.py" <i>hereafter receive the prompt; then the script is displayed, immediately after the prompt</i> <<<import MDM  MDM.send('AT\r',10) Ans=MDM.receive(20) OK	

### 3.5.7.13.6. List Script Names - #LSCRIPT

#LSCRIPT - List Script Names		SELINT 0 / 1
AT#LSCRIPT	Execution command reports either the list of file names for the files currently stored in the Easy Script® related NVM and the available free NVM memory in the format:  [#LSCRIPT: <script_name1> <size1>... [<CR><LF><CR><LF>#LSCRIPT: <script_namen> <sizen>]] <CR><LF><CR><LF>#LSCRIPT: free bytes: <free_NVM>  where: <script-namen> - file name, quoted string type (max 16 chars, case sensitive) <sizen> - size of script in bytes <free_NVM> - size of available NVM memory in bytes	
AT#LSCRIPT?	Read command has the same behavior of Execution command.	
Example	AT#LSCRIPT #LSCRIPT: First.py 51  #LSCRIPT: Second.py 178  #LSCRIPT: Third.py 95	

#LSCRIPT - List Script Names	SELINT 0 / 1
	#LSCRIPT: free bytes: 20000 OK

#LSCRIPT - List Script Names	SELINT 2
AT#LSCRIPT	Execution command reports either the list of file names for the files currently stored in the Easy Script® related NVM and the available free NVM memory in the format:  [#LSCRIPT: <script_name1>,<size1>... [<CR><LF>#LSCRIPT: <script_namen>,<sizen>]] <CR><LF>#LSCRIPT: free bytes: <free_NVM>  where: <script-namen> - file name, quoted string type (max 16 chars, case sensitive) <sizen> - size of script in bytes <free_NVM> - size of available NVM memory in bytes
AT#LSCRIPT=?	Test command returns <b>OK</b> result code.
Example	AT#LSCRIPT #LSCRIPT: "First.py",51 #LSCRIPT: "Second.py",178 #LSCRIPT: "Third.py",95 #LSCRIPT: free bytes: 20000  OK

#LCSCRIPT - List Script Names	SELINT 2
AT#LCSCRIPT	Execution command reports either the list of file names for the files currently stored in the Easy Script® related NVM, adding CRC16 information, and the available free NVM memory in the format:  [#LCSCRIPT: <script_name1>,<size1>[,<crc1>]... [<CR><LF>#LCSCRIPT: <script_namen>,<sizen>[,<crcn>]]] <CR><LF>#LCSCRIPT: free bytes: <free_NVM>  where: <script-namen> - file name, quoted string type (max 16 chars, case sensitive) <sizen> - size of script in bytes <crcn> - CRC16 poly ( $x^{16}+x^{12}+x^5+1$ ) of script in hex format <free_NVM> - size of available NVM memory in bytes  Note: CRC16 is calculated using the standard reversed CRC16-CCITT $x^{16}+x^{12}+x^5+1$ polynomial (0x1021 representation reversed) with initial value FFFF.  Note: if one file currently stored in NVM is in use than CRC16 cannot be calculated and execution command does not report <crcn> for that file. This is always true if command is executed by a Python script because at least the file pointed by

#LCSCRIPT - List Script Names		SELINT 2
#ESCIPT is in use.		
<b>AT#LCSCRIPT=&lt;script_name&gt;</b> Execution command reports size and CRC16 information of file <script_name> in the format:  <b>[#LCSCRIPT: &lt;script_name&gt;,&lt;size&gt;[,&lt;crc&gt;]]</b>  where: <script-name> - file name, quoted string type (max 16 chars, case sensitive) <size> - size of script in bytes <crc> - CRC16 poly ( $x^{16}+x^{12}+x^5+1$ ) of script in hex format  Parameter: <script_name> - file name, string type (max 16 chars, case sensitive).  Note: CRC16 is calculated using the standard reversed CRC16-CCITT $x^{16}+x^{12}+x^5+1$ polynomial (0x1021 representation reversed) with initial value FFFF.  Note: if file <script_name> is in use than CRC16 cannot be calculated and execution command does not report <crc>.  Note: if file <script_name> is not in the list of files stored in NVM execution command exits with error message.		
<b>AT#LCSCRIPT=?</b> Test command returns <b>OK</b> result code.		
Example	AT#LCSCRIPT #LCSCRIPT: "First.py",51,8FD6 #LCSCRIPT: "Second.py",178,A034 #LCSCRIPT: "Third.py",120,7C48 #LCSCRIPT: free bytes: 20000  OK  AT#LCSCRIPT="Second.py" #LCSCRIPT: "Second.py",178,A034  OK  If file Third.py is already in use. AT#LCSCRIPT #LCSCRIPT: "First.py",51,8FD6 #LCSCRIPT: "Second.py",178,A034 #LCSCRIPT: "Third.py",120 #LCSCRIPT: free bytes: 20000  OK	

### 3.5.7.13.7. Delete Script - #DSCRIPT

#DSCRIPT - Delete Script		SELINT 0 / 1
AT#DSCRIPT=<script_name>	<p>Execution command deletes a file from Easy Script® related NVM memory.</p> <p>Parameter:</p> <p>&lt;script_name&gt; - name of the file to delete, string type (max 16 chars, case sensitive)</p> <p>Note: if the file &lt;script_name&gt; is not present an error code is reported.</p>	
AT#DSCRIPT=?	Test command returns <b>OK</b> result code.	
Example	AT#DSCRIPT="Third.py" OK	

#DSCRIPT - Delete Script		SELINT 2
AT#DSCRIPT=[<script_name>]	<p>Execution command deletes a file from Easy Script® related NVM memory.</p> <p>Parameter:</p> <p>&lt;script_name&gt; - name of the file to delete, string type (max 16 chars, case sensitive)</p> <p>Note: if the file &lt;script_name&gt; is not present an error code is reported.</p>	
AT#DSCRIPT=?	Test command returns <b>OK</b> result code.	
Example	AT#DSCRIPT="Third.py" OK	

### 3.5.7.13.8. Reboot - #REBOOT

#REBOOT - Reboot		SELINT 0 / 1
AT#REBOOT	<p>Execution command reboots immediately the unit.</p> <p>It can be used to reboot the system after a remote update of the script in order to have the new one running.</p> <p>Note: if AT#REBOOT follows an AT command that stores some parameters in NVM, it is recommended to insert a delay of at least 5 seconds before to issue AT#REBOOT, to permit the complete NVM storing</p>	

#REBOOT - Reboot		SELINT 0 / 1
AT#REBOOT?	Read command has the same behaviour of Execution command.	
AT#REBOOT=?	Test command returns <b>OK</b> result code.	
Example	AT#REBOOT OK ... Module Reboots ...	

#REBOOT - Reboot		SELINT 2
AT#REBOOT	<p>Execution command reboots immediately the unit.</p> <p>It can be used to reboot the system after a remote update of the script in order to have the new one running.</p> <p>Note: if AT#REBOOT follows an AT command that stores some parameters in NVM, it is recommended to insert a delay of at least 5 seconds before to issue AT#REBOOT, to permit the complete NVM storing</p> <p>Note: AT#REBOOT is an obsolete AT command; please refer to AT#ENHRST to perform a module reboot</p>	
AT#REBOOT=?	Test command returns <b>OK</b> result code.	
Example	AT#REBOOT OK ... Module Reboots ...	

### 3.5.7.13.9. CMUX Interface Enable - #CMUXSCR

#CMUXSCR - CMUX Interface Enable		SELINT 2
AT#CMUXSCR=<enable>,[<rate>]	<p>Set command enables/disables the 3GPP TS 27.010 multiplexing protocol control channel (see +CMUX) at startup before the <b>current script</b> (see #ESCRIPt) execution and specifies the <b>DTE</b> speed at which the device sends and receives CMUX frames (used to fix the <b>DTE-DCE</b> interface speed).</p> <p>Parameters:</p> <p>&lt;enable&gt; - enables/disables CMUX interface at startup.</p> <p>0 - it disables CMUX interface at startup, before <b>current script</b> execution (factory default)</p> <p>1 - it enables CMUX interface at startup, before <b>current script</b> execution</p> <p>&lt;rate&gt;</p> <ul style="list-style-type: none"> <li>300</li> <li>1200</li> <li>2400</li> </ul>	

#CMUXSCR - CMUX Interface Enable	SELINT 2
	4800 9600 19200 38400 57600 115200 (default)  If <rate> is omitted the value is unchanged  <enable> and <rate> values are saved in NVM
AT#CMUXSCR ?	Read command returns the current value of #CMUXSCR parameters in the format:  <b>#CMUXSCR: &lt;enable&gt;,&lt;rate&gt;</b>
AT#CMUXSCR =?	Test command reports the range for the parameters <enable> and <rate>

### 3.5.7.14. MMS AT Command Set

#### 3.5.7.14.1. Set network parameters for MMS - #MMSSET

#MMSSET – Set network parameters for MMS	SELINT 2
AT#MMSSET=<cid>, <MMS proxy>, <MMS port>, <username>, <password>, <mmsc>,<host>	<p>This command sets MMSC parameters required to send or retrieve an MMS. Note that PDP context &lt;cid&gt; should be previously set by AT+CGDCONT and activated.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;cid&gt; - PDP context identifier (see +CGDCONT command)</li> <li>1..5 - numeric parameter which specifies a particular PDP context definition</li> <li>&lt;MMS proxy&gt; - string that indicates MMS proxy IP address for MMS sending. The length of the string is limited to 50 characters.</li> <li>&lt;MMS port&gt; - integer that indicates MMS port for MMS sending</li> <li>&lt;username&gt; - string that indicates the user name that will be used when connecting to the MMS proxy. The valid characters are ASCII characters. Maximum length is 64 characters</li> <li>&lt;password&gt; - string that indicates the password that will be used when connecting to the MMS proxy. The valid characters are ASCII characters. Maximum length is 40 characters</li> <li>&lt;mmsc&gt; - string that indicates the MMS Server URL, i.e the address for MMS Service Centre name. The length of the string is limited to 50 characters</li> <li>&lt;host&gt; - string that indicates the “Host:” string to be used in the POST message sent to MMSC, instead of MMS proxy IP address. This string is used if &lt;MMS port&gt; is 0, and is required by some operators. The length</li> </ul>

	<p>of the string is limited to 50 characters.</p> <p>Note: the values set by command are directly stored in NVM and do not depend on the specific CMUX instance.</p>
AT#MMSSET?	Read command reports the currently selected parameters in the format: <b>#MMSSET: &lt;MMS APN&gt;,&lt;MMS proxy&gt;,&lt;MMS port&gt;,&lt;username&gt;,&lt;password&gt;,&lt;mmsc&gt;</b>
AT#MMSSET=?	Test command reports the supported range of values for parameters <b>&lt;MMS APN&gt;,&lt;MMS proxy&gt;,&lt;MMS port&gt;,&lt;username&gt;,&lt;password&gt;,&lt;mmsc&gt;.</b>

### 3.5.7.14.2. General settings - #MMGS

#MMGS – General Settings	SELINT 2
AT#MMGS=<send retries>, <message class>, <priority>, <sender visibility>, <delivery report>, <read report>	<p>This command sets outgoing MMS parameters.</p> <p>Parameters:</p> <p>&lt;<b>send retries</b>&gt; - Number of sending retries in case of sending failure. Default is '1': message is sent once to the MMS center. Maximum tries are 3 (including the first try)</p> <p>&lt;<b>message class</b>&gt; - integer that indicates MMS class 128 – personal (default) 129 - advertisement 130 - informational 131 - auto</p> <p>&lt;<b>priority</b>&gt; - integer that indicates the priority of the MMS assigned by the originator MMS Client 128 - low 129 – normal (default) 130 - high</p> <p>&lt;<b>sender visibility</b>&gt; - integer value indicating whether the originator of the MMS wishes to show or hide her address 128 - hide 129 - show (default)</p> <p>&lt;<b>delivery report</b>&gt; - integer that specifies whether the originator MMS Client requests a delivery report from each recipient 128 - yes 129 – no (default)</p> <p>&lt;<b>read report</b>&gt; - integer that specifies whether the originator MMS Client wants a read report from each recipient 128 - yes 129 – no (default)</p>

	Note: the values set by command are directly stored in NVM and do not depend on the specific CMUX instance.
AT#MMSSGS?	Read command reports the currently selected parameters in the format: <b>#MMSSGS: &lt;send retries&gt;,&lt;message class&gt;,&lt;priority&gt;,&lt;sender visibility&gt;,&lt;delivery report&gt;,&lt;read report&gt;</b>
AT#MMSSGS=?	Test command reports the supported range of values for parameters <send retries>,<message class>,<priority>,<sender visibility>,<delivery report>,<read report>.

#### 3.5.7.14.3. Create/Update MMS Message Mailing List - #MMSTO

#MMSTO – Create/Update MMS Message Mailing List		SELINT 2
AT#MMSTO=<op>,<recipients>	<p>This command creates/updates a list of recipients for outgoing MMS.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;op&gt; - operation</li> <li>0 – overwrite (default)</li> <li>1 - append</li> </ul> <p>&lt;recipients&gt; - string type indicating the destination addresses for outgoing MMS (phone numbers, separated by ",". There can be up to 20 subscriber numbers. Each subscriber number can be no more than 15 characters)</p> <p>Note: the value of &lt;recipients&gt; set by command is directly stored in NVM and doesn't depend on the specific CMUX instance.</p>	
AT#MMSTO?	Read command reports the currently selected <recipients> in the format: <b>#MMSTO: &lt;recipients&gt;</b>	
AT#MMSTO=?	Test command reports the supported range of values for parameters <op> and <recipients> (maximum number of <recipients> addresses).	
Example	<p>To clear whole recipients list:</p> <pre>at#mmsto=0, """ OK</pre>	

#### 3.5.7.14.4. Send a MMS Message - #MMSSEND

#MMSSEND – Send a MMS Message		SELINT 2
AT#MMSSEND=<subject>,<attached file>,<recipients>[,<subscriber	This command sends an MMS.	Parameters:

<b>list&gt;]</b>	<p><b>&lt;subject&gt;</b> - string indicating MMS subject, with maximum input size of 41 characters</p> <p><b>&lt;attached file&gt;</b> - string indicating the name of the image file to be attached to MMS. The maximum allowed name size is 32 characters</p> <p><b>&lt;recipients&gt;</b> - string type indicating the destination addresses for outgoing MMS (phone numbers, separated by ",". There can be up to 20 subscriber numbers. Each subscriber number can be no more than 15 characters)</p> <p><b>&lt;subscriber list&gt;</b> - integer indicating whether to use or not the subscriber list created with #MMSTO</p> <p>0 – do not use subscriber list (see #MMSTO), use &lt;recipients&gt; (default)</p> <p>1 – use subscriber list (see #MMSTO) ; &lt;recipients&gt; is ignored</p> <p>The device responds to the command with the prompt '&gt;' and waits for the message text.</p> <p>To complete the operation send <b>Ctrl-Z</b> char (0x1A hex); to exit without writing the message send <b>ESC</b> char (0x1B hex).</p> <p>If MMS message is successfully sent, then the response is <b>OK</b>. If delivery report has been requested, a MMS Delivery Report must be sent from the MMS Proxy-Relay to the originator MMS Client. Upon receiving of such report, an unsolicited code will be sent:</p> <p><b>#MMSSEND: &lt;msgID&gt;</b></p> <p>where &lt;msgID&gt; is the reference that was originally assigned to the MMS by the MMS Proxy-Relay and included in the corresponding M-Send.conf. The ID enables an MMS Client to match delivery reports with previously sent or forwarded MMS's.</p> <p>If message sending fails for some reason, an error code is reported.</p> <p>Note: prior to send the MMS, the PDP context &lt;cid&gt; (see #MMSSET command) must be defined and activated using +CGDCONT and #SGACT commands.</p> <p>Note: only .jpg or .gif images can be sent as attachment.</p>
<b>AT#MMSSEND=?</b>	Test command tests for command existence.
Example	<pre>at+cgdcont=1,"IP","mms.tim.it","0.0.0.0",0,0 OK at#sgact=1,1 #SGACT: 10.214.84.15</pre>

	<i>OK</i>
--	-----------

### 3.5.7.14.5. Add MMS attachment - #MMSATT

#MMSATT – Add MMS Attachment		SELINT 2
AT#MMSATT=<file name>,<size>	<p>This command causes the MODULE to store a file in the NVM, naming it &lt;file name&gt;. The file is then attached to a MMS message by #MMSSEND.</p> <p>The file should be sent using RAW ASCII file transfer. It is important to set properly the port settings. In particular: <b>Flow control: hardware.</b> <b>Baud rate: 115200 bps</b></p> <p>Parameters:  <b>&lt;file name&gt;</b> - string indicating MMS attached file name with extension, with maximum name size of 16 characters (including extension; case sensitive).</p> <p>&lt;size&gt; - size of the attached file, in bytes. The maximum allowed size length is 300K.</p> <p>The device shall prompt a five character sequence  <b>&lt;CR&gt;&lt;LF&gt;&lt;greater_than&gt;&lt;greater_than&gt;&lt;greater_than&gt;</b>  <b>(IRA 13, 10, 62, 62, 62)</b>  after command line is terminated with &lt;CR&gt;; after that a file can be entered from TE, sized &lt;size&gt; bytes.</p> <p>The operations completes when all the bytes are received.</p> <p>If writing ends successfully, the response is <b>OK</b>; otherwise an error code is reported.</p> <p>Note: the file name should be passed between quotes; typically it has .jpg extension; file names are case sensitive. Only .jpg or .gif images can be stored to be sent as attachment.</p> <p>Note: when sending the script be sure that the line terminator is &lt;CR&gt;&lt;LF&gt; and that your terminal program does not change it.</p>	
AT#MMSATT=?	Test command reports the maximum length of <file name> and range for <size>.	

### 3.5.7.14.6. HTTP last message - #MMMSMSG

#MMMSMSG - HTTP Last Message		SELINT 2
AT#MMMSMSG	Execution command returns the last response from HTTP server (numerical code and string, if available).	
AT#MMMSMSG=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.14.7. Set notification handling - #MMSSNH

#MMSSNH - Set Notification Handling		SELINT 2
AT#MMSSNH = <mode>	<p>Set command enables/disables the received MMS notification unsolicited indication in the ME.</p> <p>Parameter:</p> <p>&lt;mode&gt; - type of notification</p> <ul style="list-style-type: none"> <li>0 - disabled (factory default)</li> <li>1 - enabled; the ME informs of receiving of MMS Notifications, providing the MMS Client with information about a MMS located at the recipient MMS Proxy-Relay and waiting for retrieval, through the following basic unsolicited indication:</li> </ul> <p><b>#MMSI: "MMS NOTIFICATION"</b></p> <p>The notification typically consists of a concatenated SMS in WAP Push format. The message can be then decoded with #MMSLN command. Single SMS in the notification can be listed using +CMGL command. It is recommended to use +CNMI command to enable unsolicited indication of incoming SMS's holding the notification.</p> <p>Note: It is recommended to use "AT+CNMI=2,1" command to enable unsolicited indication of incoming SMS's holding the notification, and to store them in SIM for subsequent decoding with #MMSLN command.</p>	
AT#MMSSNH?	Read command reports whether the unsolicited indication #MMSSNH is currently enabled or not, in the format:	
	<b>#MMSSNH: &lt;mode&gt;</b>	
AT#MMSSNH=?	Test command returns the supported range of values for parameter <mode>.	
Example	<pre>at+cnmi=2,1 OK  #MMSI: "MMS NOTIFICATION"  +CMTI: "SM",1  &lt;--- SMS received  +CMTI: "SM",2  &lt;--- SMS received</pre>	

#MMSSNH - Set Notification Handling	SELINT 2
	<pre> at#mmsln #MMSLN: "+393351510315","da modulo tim a tim 3","http://mms.tim.it/servlets/mms/ mmsc?CN12_APqoaqIjy-IlqT29d@KR0",20000  OK at+cmgf=1 OK at+cmgl=ALL +CMGL: 1,"REC READ","40099","","12/11/20,10:11:44+04" 0C05040B8423F008042BD902010006256170706C69636174696F6E2F766E642E 7761702E6D6D732D 6D65737361676500AF848D019F8C8298434E31325F4150716F6171316A792D49 6C7154323964404B 5230008D908919802B333933335313531303331352F545950453D504C4D4E009 66461206D6F6475 6C6F2074696D20612074696D2033008A808E024E +CMGL: 2,"REC UNREAD","40099","","12/11/20,10:11:45+04" 0C05040B8423F008042BD90202208805810302A2FF83687474703A2F2F6D6D7 32E74696D2E69742F 736572766C6574732F6D6D732F6D6D73633F434E31325F4150716F6171316A7 92D496C7154323964 404B523000  OK at+cmgd=1,4 &lt;-- delete all sms OK at+cmgl=ALL OK at#mmsln &lt;--- list is now empty OK </pre>

### 3.5.7.14.8. List notifications - #MMSLN

#MMSLN - List Notifications	SELINT 2
AT#MMSLN	<p>Execution command lists all notifications of MMS waiting to be retrieved from proxy server, by reading from SIM the concatenated SMS's containing the WAP Push notification of waiting messages, in the format</p> <p><b>#MMSLN: &lt;fromVal&gt;,&lt;subjVal&gt;,&lt;URI&gt;,&lt;size&gt;</b></p> <p>Where</p> <p><b>&lt;fromVal&gt;</b>: sender address</p>

#MMSLN - List Notifications		SELINT 2
	<p>&lt;subjVal&gt;: subject</p> <p>&lt;URI&gt;: URI to be used to retrieve message</p> <p>&lt;size&gt;: message size as reported by MMSC</p>	
AT#MMSLN=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.14.9. Get MMS - #MMSSGET

#MMSSGET – Get MMS		SELINT 2
AT#MMSSGET=<url>,<size>,<file name>	<p>This command retrieves an MMS message from proxy server and stores it in the MODULE NVM. Note that PDP context &lt;cid&gt; (see #MMSSSET command) must be previously defined and activated using +CGDCONT and #SGACT commands.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;url&gt; - string indicating MMS address on proxy server, as indicated by AT#MMSLN command (see above)</li> <li>&lt;size&gt;: message size</li> <li>&lt;file name&gt; - string indicating the name of the file in NVM (with extension .mms) to be used to store the retrieved MMS; maximum length is 16 characters, including file extension</li> </ul>	
AT#MMSSGET=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.14.10. Forward MMS - #MMSFWD

#MMSFWD – Forward MMS		SELINT 2
AT#MMSFWD=<da>,<url>	<p>This command forwards an MMS message stored in proxy server to the specified destination. Note that PDP context &lt;cid&gt; (see #MMSSSET command) must be previously defined and activated using +CGDCONT and #SGACT commands.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;da&gt; - string type indicating the destination addresses for outgoing MMS (phone numbers, separated by ",". There can be up to 20 subscriber numbers. Each subscriber number can be no more than 15 characters)</li> <li>&lt;url&gt; - string indicating MMS address on proxy server, as indicated by AT#MMSLN command (see above)</li> </ul> <p>Note: this command is based upon an MMS 1.2 or higher functionality. The forward transaction consists of the M-Forward.req message, sent from the MMS Client to the MMS Proxy-Relay in order to request an MMS to be forwarded, that is located at the MMS Proxy-Relay, and could not be supported by every MMSC.</p>	
AT#MMSFWD=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.14.11. Delete MMS from the MMS proxy server - #MMSDEL

#MMSDEL – Delete MMS from the MMS proxy server		SELINT 2
AT#MMSDEL=<url>	<p>This command deletes an MMS message stored in proxy server. Note that PDP context &lt;cid&gt; (see #MMSET command) must be previously defined and activated using +CGDCONT and #SGACT commands.</p> <p>Parameters:</p> <p>&lt;url&gt; - string indicating MMS address on proxy server, as indicated by AT#MMSLN command (see above)</p> <p>Note: this command is based upon an MMS 1.3 functionality, and could not be supported by every MMSC.</p>	
AT#MMSDEL=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.14.12. List MMS files - #MMSLIMG

#MMSLIMG - List MMS files		SELINT 2
AT#MMSLIMG	<p>Execution command reports the list of image and .mms file names for the files currently stored in the NVM in the format:</p> <p># MMSLIMG: &lt;img_name1&gt;,&lt;size1&gt;...  [&lt;CR&gt;&lt;LF&gt;# MMSLIMG: &lt;img_namen&gt;,&lt;sizen&gt;]]</p> <p>where:</p> <p>&lt;img-namen&gt; - file name, quoted string type (max 16 chars, case sensitive)</p> <p>&lt;sizen&gt; - size of file in bytes</p>	
AT#MMSLIMG=?	Test command returns <b>OK</b> result code.	

### 3.5.7.14.13. Delete image file - #MMSDIMG

#MMSDIMG - Delete Image file		SELINT 2
AT#MMSDIMG=[<img_name>]	<p>Set command deletes a file from NVM memory.</p> <p>Parameter:</p> <p>&lt;img_name&gt; - name of the file to delete, string type (max 16 chars, case sensitive)</p>	
	<p>Note: if the file &lt;img_name&gt; is not present an error code is reported.</p>	
AT#MMSDIMG =?	Test command returns <b>OK</b> result code.	

### 3.5.7.15. HTTP client AT Command Set

#### 3.5.7.15.1. Configure HTTP parameters - #HTTPCFG

#HTTPCFG – configure HTTP parameters		SELINT 2
AT#HTTPCFG=<prof_id>[,<server_address>[,<server_port>]	This command sets the parameters needed to the HTTP connection	

```
>[,<auth_type>[,<username>[,<password>[,<ssl_enabled>[,<timeout> [,<cid>]]]]]]]
```

Parameters:

**<prof\_id>** - Numeric parameter indicating the profile identifier.

Range: 0-2

**<server\_address>** - String parameter indicating the IP address of the HTTP server.

This parameter can be either:

- any valid IP address in the format: "xxx.xxx.xxx.xxx"
- any host name to be solved with a DNS query

Default: "" for first and second profile; "m2mlocate.telit.com" for third profile.

**<server\_port>** - Numeric parameter indicating the TCP remote port of the HTTP server to connect to.

Default: 80 for first and second profile; 9978 for third profile. Range 1...65535.

**<auth\_type>** - Numeric parameter indicating the HTTP authentication type.

- 0 – no authentication (default)
- 1 – basic authentication

**<username>** - String parameter indicating authentication user identification string for HTTP.

**<password>** - String parameter indicating authentication password for HTTP.

**<ssl\_enabled>** - Numeric parameter indicating if the SSL encryption is enabled.

- 0 – SSL encryption disabled (default)

1 – SSL encryption enabled (not yet implemented and not available for setting)

**<timeout>**: Numeric parameter indicating the time interval in seconds to wait for receiving data from HTTP server. Range: (1- 65535). Default: 120.

**<cid>** - Numeric parameter indicating the PDP Context Identifier. Range: (1-5). Default: 1

Note: a special form of the Set command, #HTTPCFG=<prof\_id>, causes the values for profile number <prof\_id> to reset to default values.

Note: if the SSL encryption is enabled, the <cid> parameter has to be set to 1.

Note: only one profile can use the SSL encryption.

	Note: values are automatically saved in NVM.
AT#HTTPCFG?	<p>Read command returns the current settings for each defined profile in the format:</p> <pre>#HTTPCFG: &lt;prof_id&gt;,&lt;server_address&gt;,&lt;server_port&gt;,&lt;auth_type&gt;,&lt;username&gt; ,&lt;password&gt;,&lt;ssl_enabled&gt;,&lt;timeout&gt;,&lt;cid&gt;&lt;CR&gt;&lt;LF&gt;[&lt;CR&gt;&lt;LF&gt;# HTTPCFG: &lt;prof_id&gt;,&lt;server_address&gt;,&lt;server_port&gt;,&lt;auth_type&gt;,&lt;username&gt; ,&lt;password&gt;,&lt;ssl_enabled&gt;,&lt;timeout&gt;,&lt;cid&gt;]&lt;CR&gt;&lt;LF&gt;[...]]</pre>
AT#HTTPCFG =?	<p>Test command returns the supported range of parameters &lt;prof_id&gt;, &lt;server_port&gt;, &lt;auth_type&gt;, &lt;ssl_enabled&gt;, &lt;timeout&gt; and &lt;cid&gt; and the maximum length of &lt;server_address&gt;, &lt;username&gt; and &lt;password&gt; parameters in the format:</p> <pre># HTTPCFG: (list of supported &lt;prof_id&gt;s),&lt;s_length&gt;,(list of supported &lt;server_port&gt;s), (list of supported &lt;auth_type&gt;s),&lt;u_length&gt;,&lt;p_length&gt;,(list of supported &lt;ssl_enabled&gt;s),(list of supported &lt;timeout&gt;s),(list of supported &lt;cid&gt;s)</pre> <p>where:</p> <ul style="list-style-type: none"> <li>&lt;s_length&gt; - integer type value indicating the maximum length of parameter &lt;server_address&gt;.</li> <li>&lt;u_length&gt; - integer type value indicating the maximum length of parameter &lt;username&gt;.</li> <li>&lt;p_length&gt; - integer type value indicating the maximum length of parameter &lt;password&gt;</li> </ul>

### 3.5.7.15.2. Send HTTP GET, HEAD or DELETE request - #HTTPQRY

#HTTPQRY – send HTTP GET, HEAD or DELETE request	SELINT 2
<p>AT#HTTPQRY=&lt;prof_id&gt;,&lt;command&gt;,&lt;resource&gt;[,&lt;extra_header_line&gt;]</p> <p>Execution command performs a GET, HEAD or DELETE request to HTTP server.</p> <p>Parameters:</p> <p>&lt;prof_id&gt; - Numeric parameter indicating the profile identifier. Range: 0-2</p> <p>&lt;command&gt;: Numeric parameter indicating the command requested to HTTP server: 0 – GET 1 – HEAD 2 – DELETE</p>	

	<p><b>&lt;resource&gt;</b>: String parameter indicating the HTTP resource (uri), object of the request</p> <p><b>&lt;extra_header_line&gt;</b>: String parameter indicating optional HTTP header line</p> <p>If sending ends successfully, the response is OK; otherwise an error code is reported.</p> <p>Note: the HTTP request header sent with #HTTPQRY always contains the “Connection: close” line, and it can not be removed.</p> <p>When the HTTP server answer is received, then the following URC is put on the serial port:</p> <p><b>#HTTPRING:</b>  <b>&lt;prof_id&gt;,&lt;http_status_code&gt;,&lt;content_type&gt;,&lt;data_size&gt;</b></p> <p>Where:  <b>&lt;prof_id&gt;</b> is defined as above  <b>&lt;http_status_code&gt;</b> is the numeric status code, as received from the server (see <a href="#">RFC 2616</a>)  <b>&lt;content_type&gt;</b> is a string reporting the “Content-Type” header line, as received from the server (see RFC 2616)  <b>&lt;data_size&gt;</b> is the byte amount of data received from the server. If the server doesn’t report the “Content-Length:” header line, the parameter value is 0.</p> <p>Note: if there are no data from server or the server doesn’t answer within the time interval specified in <b>&lt;timeout&gt;</b> parameter of #HTTPCFG command, then the URC #HTTPRING &lt;http_status_code&gt; parameter has value 0.</p>
<b>AT#HTTPQRY=?</b>	<p>Test command reports the supported range of values for the parameters <b>&lt;prof_id&gt;</b> and <b>&lt;command&gt;</b> and the maximum length of <b>&lt;resource&gt;</b> parameter in the format:</p> <p><b>#HTTPQRY: (list of supported &lt;prof_id&gt;s),(list of supported &lt;command&gt;s),&lt;r_length&gt;,&lt;m_length&gt;</b></p> <p>where:  <b>&lt;r_length&gt;</b> - integer type value indicating the maximum length of parameter <b>&lt;resource&gt;</b>.  <b>&lt;m_length&gt;</b> - integer type value indicating the maximum length of parameter <b>&lt;extra_header_line&gt;</b>.</p>

### 3.5.7.15.3. Send HTTP POST or PUT request - #HTTPPSND

#HTTPSNND – send HTTP POST or PUT request	SELINT 2
<p><b>AT#HTTPSNND=&lt;prof_id&gt;,&lt;command&gt;,&lt;resource&gt;,&lt;data_len&gt;[,&lt;post_param&gt;[,&lt;extra_header_line&gt;]]</b></p> <p>The device shall prompt a three character sequence  <b>&lt;greater_than&gt;&lt;greater_than&gt;&lt;greater_than&gt;</b>  <b>(IRA 62, 62, 62)</b></p> <p>after command line is terminated with &lt;CR&gt;; after that the data can be entered from TE, sized <b>&lt;data_len&gt;</b> bytes.</p> <p>Parameters:</p> <p><b>&lt;prof_id&gt;</b> - Numeric parameter indicating the profile identifier.  Range: 0-2</p> <p><b>&lt;command&gt;</b>: Numeric parameter indicating the command requested to HTTP server:  0 – POST  1 – PUT</p> <p><b>&lt;resource&gt;</b>: String parameter indicating the HTTP resource (uri), object of the request</p> <p><b>&lt;data_len&gt;</b>: Numeric parameter indicating the data length to input in bytes</p> <p><b>&lt;post_param&gt;</b>: Numeric/string parameter indicating the HTTP Content-type identifier, used only for POST command, optionally followed by colon character (:) and a string that extends with sub-types the identifier:  “0[:extension]” – “application/x-www-form-urlencoded” with optional extension  “1[:extension]” – “text/plain” with optional extension  “2[:extension]” – “application/octet-stream” with optional extension  “3[:extension]” – “multipart/form-data” with optional extension  other content – free string corresponding to other content type and possible sub-types</p> <p><b>&lt;extra_header_line&gt;</b>: String parameter indicating optional HTTP header line</p> <p>If sending ends successfully, the response is OK; otherwise an error code is reported.</p> <p>Note: the HTTP request header sent with #HTTPSNND always contains the “Connection: close” line, and it can not be removed.</p>	

	<p>When the HTTP server answer is received, then the following URC is put on the serial port:</p> <p><b>#HTTPRING:</b>  <b>&lt;prof_id&gt;,&lt;http_status_code&gt;,&lt;content_type&gt;,&lt;data_size&gt;</b></p> <p>Where:  <b>&lt;prof_id&gt;</b> is defined as above  <b>&lt;http_status_code&gt;</b> is the numeric status code, as received from the server (see <a href="#">RFC 2616</a>)  <b>&lt;content_type&gt;</b> is a string reporting the “Content-Type” header line, as received from the server (see RFC 2616)  <b>&lt;data_size&gt;</b> is the byte amount of data received from the server. If the server doesn’t report the "Content-Length:" header line, the parameter value is 0.</p> <p>Note: if there are no data from server or the server doesn’t answer within the time interval specified in <b>&lt;timeout&gt;</b> parameter of #HTTPCFG command, then the URC <b>#HTTPRING &lt;http_status_code&gt;</b> parameter has value 0.</p>
AT#HTTPSND=?	<p>Test command returns the supported range of parameters <b>&lt;prof_id&gt;</b>, <b>&lt;command&gt;</b> and <b>&lt;data_len&gt;</b> and the maximum length of <b>&lt;resource&gt;</b>, <b>&lt;post_param&gt;</b> and <b>&lt;extra_header_line&gt;</b> parameters in the format:</p> <p><b># HTTPSND: (list of supported &lt;prof_id&gt;s),(list of supported &lt;command&gt;s),&lt;r_length&gt;, (list of supported &lt;data_len&gt;s),&lt;p_length&gt;,&lt;m_length&gt;</b></p> <p>where:  <b>&lt;r_length&gt;</b> - integer type value indicating the maximum length of parameter <b>&lt;resource&gt;</b>.  <b>&lt;p_length&gt;</b> - integer type value indicating the maximum length of parameter <b>&lt;post_param&gt;</b>.  <b>&lt;m_length&gt;</b> - integer type value indicating the maximum length of parameter <b>&lt;extra_header_line&gt;</b></p>
Example	<p><i>Post 100 byte without “Content-type” header</i>  <b>AT#HTTPSND=0,0,””,100</b>  <b>&gt;&gt;&gt;</b></p> <p><i>Post 100 byte with “application/x-www-form-urlencoded”</i>  <b>AT#HTTPSND=0,0,””,100,0</b>  <b>&gt;&gt;&gt;</b></p> <p><i>Post 100 byte with “multipart/form-data” and extension</i>  <b>AT#HTTPSND=0,0,””,100,”3:boundary=----FormBoundary”</b></p>

|&gt;&gt;&gt;

### 3.5.7.15.4. Receive HTTP server data - #HTTPPRCV

#HTTPRCV – receive HTTP server data	SELINT 2
AT#HTTPRCV=<prof_id>	<p>Execution command permits the user to read data from HTTP server in response to a previous HTTP module request. The module is notified of these data by the #HTTPRING URC.</p> <p>The device shall prompt a three character sequence  <b>&lt;less_than&gt;&lt;less_than&gt;&lt;less_than&gt;</b>  <b>(IRA 60, 60, 60)</b>          followed by the data.</p> <p>If reading ends successfully, the response is OK; otherwise an error code is reported.</p> <p>Parameters:</p> <p>&lt;<b>prof_id</b>&gt; - Numeric parameter indicating the profile identifier.          Range: 0-2</p> <p>Note: If the data are not present or the #HTTPRING &lt;http_status_code&gt; parameter has value 0, an error code is reported.</p>
AT#HTTPRCV=?	<p>Test command reports the supported range of values for &lt;prof_id&gt; parameter in the format:</p> <p><b># HTTPRCV: (list of supported &lt;prof_id&gt;s)</b></p>

### 3.5.7.16. GPS AT Commands Set

#### 3.5.7.16.1. GPS Controller Power Management - \$GPSP

\$GPSP - GPS Controller Power Management	SELINT 2
AT\$GPSP=<status>	<p>Set command allows to manage power-up or down of the GPS controller</p> <p>Parameter:  <b>&lt;status&gt;</b>          0 - GPS controller is powered down          1 - GPS controller is powered up (default)</p> <p>Note: for the GPS product: if the GPS controller is powered down while <b>Vaux</b> pin is enabled they'll both be also powered off.</p>

\$GPSP - GPS Controller Power Management		SELINT 2
AT\$GPSP?	Note: the current setting is stored through \$GPSSAV	
AT\$GPSP?	Read command reports the current value of the <status> parameter, in the format:  \$GPSP: <status>  Note (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS only): the <status> parameter does not report the real power status of the GPS module but only the value set through the set command above. The <status> parameter, once stored through the AT\$GPSSAV command, specifies the power status of the GPS module (ON or OFF) at system startup	
AT\$GPSP=?	Test command reports the range of supported values for parameter <status>	
Example	AT\$GPSP=0 OK	
Note	The command is available in “controlled mode” only (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)	

### 3.5.7.16.2. GPS Reset - \$GPSR

\$GPSR - GPS Reset		SELINT 2
AT\$GPSR=<reset_type>	Execution command allows resetting the GPS controller.  For GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS: 0 – Factory reset: this option clears all the GPS memory including Clock Drift and Extended Ephemeris files stored into flash memory. 1 – Coldstart (No Almanac, No Ephemeris): this option clears all data that is currently stored in the internal memory of the GPS receiver including Last Position, Almanac, Ephemeris and Time. However the stored Clock Drift and Extended Ephemeris are retained. 2 – Warmstart (No ephemeris): this option clears Ephemeris and Last Position only. Almanac and Extended Ephemeris are retained. 3 – Hotstart (with stored Almanac and Ephemeris): the GPS receiver restarts by using all data that is currently stored in the internal memory of the GPS receiver: valid Almanac, Ephemeris and Extended Ephemeris are therefore retained and used..	
AT\$GPSR=?	Test command reports the range of supported values for parameter <reset_type>	
Example	AT\$GPSR=0 OK	
Note	The command is available in “controlled mode” only  This command must be issued only when the GPS receiver is operating in Full Power Mode (see \$GPSPS), otherwise it might have no effect (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD,	

\$GPSR - GPS Reset	SELINT 2
	<p>GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>Since the Factory Reset (&lt;reset_type&gt;=0) performs a hardware reconfiguration of the GPS receiver, the issuing of two consecutive <b>AT\$GPSR</b> commands should be avoided, otherwise the reconfiguration might fail: an <b>ERROR</b> is returned in the latter case (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p>

### 3.5.7.16.3. GPS Device Type Set - \$GPSD

\$GPSSD - GPS Device Type Set	SELINT 2
<b>AT\$GPSSD=</b> <b>&lt;device_type&gt;</b> <b>[,&lt;sub_device_type&gt;]</b>	<p>Set command defines which GNSS device is connected to the module. It dedicates the Serial port #1 of the module (TRACE) to receive the GPS strings from the GPS module.</p> <p>Parameter:</p> <p><b>&lt;device type&gt;</b></p> <p>0 - none; the serial port is not connected to the GNSS device and available for standard use (default for GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>1 - currently has no meaning, maintained for backward compatibility</p> <p>2 - serial port connected to the GNSS serial port: controlled mode (default for GE864-GPS). This configuration is for SiRF StarIV-based GNSS modules support only (JF2-FLASH, JF2-ROM and JF2-ROM+EEPROM)</p> <p>3 - serial port connected to the GNSS serial port: controlled mode. This configuration is for SiRF StarIV-based GNSS modules support only (JN3-FLASH, JN3-ROM and JN3-ROM+EEPROM). <u>This value is not currently supported on GE910-QUAD and GE910-GNSS.</u></p> <p>4 - serial port connected to the GNSS serial port: controlled mode (default for GE910-GNSS). This configuration is for ST TeseoII-based GPS modules support only (SL869)</p> <p><b>&lt;sub_device type&gt;</b></p> <p>0 - Flash device: Flash based module (default).</p> <p>1 - ROM device: ROM based module.</p> <p>2 - ROM + EEPROM device: EEPROM based module.</p> <p>Note: The &lt;sub_device type&gt; can be used with SiRF StarIV-based GPS modules (JF2/JN3) only, i.e. when <b>AT\$GPSSD=2 OR AT\$GPSSD=3</b>.</p> <p>Note: the current setting is stored through <b>\$GPSSAV</b></p>
<b>AT\$GPSSD?</b>	Read command reports the current value of <device_type> and <sub_device_type> parameters, in the format:

\$GPSD - GPS Device Type Set		SELINT 2
AT\$GPSD=?	\$GPSD: <device_type>,<sub_device_type>	Test command reports the range of supported values for parameter <device_type>,<sub_device_type>
Example		<pre>AT\$GPSD=0 OK  AT\$GPSD=2, 1 OK  AT\$GPSD=4, 2 ERROR</pre>

### 3.5.7.16.4. GPS Software Version - \$GPSSW

\$GPSSW - GPS Software Version		SELINT 2
AT\$GPSSW	Execution command provides GPS Module software version in the format:	
	\$GPSSW: <sw version>	
AT\$GPSSW?	Read command has the same meaning as the Execution command	
AT\$GPSSW=?	Test command returns the OK result code	
Example	<p>For GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS with SE/SL868:</p> <pre>AT\$GPSSW \$GPSSW: GSD4e_4.0.2-P1 05/26/2010 146 OK</pre> <p>For GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS with SL869:</p> <pre>AT\$GPSSW \$GPSSW: SL869 v3.0.0.1 -STD -N96 OK</pre>	
Note	<p>The command is available in “controlled mode” only (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>GPS Module software version is available in few seconds at first GPS module startup (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p>	

### 3.5.7.16.5. GPS Antenna Type Definition - \$GPSAT

\$GPSAT – GPS Antenna LNA Control		SELINT 2
AT\$GPSAT=	Set command selects the GPS antenna used.	

<type>	<b>For GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS</b> Parameter: <b>&lt;type&gt;</b> 0 - Disable External GPS Antenna LNA (default): GPS chip Internal LNA Gain Mode is High and <b>GPS_EXT_LNA_EN</b> signal is Low 1 - Enable External GPS Antenna LNA: GPS chip Internal LNA Gain Mode is Low and <b>GPS_EXT_LNA_EN</b> signal is High  Note: the current setting is stored through <b>\$GPSSAV</b>
<b>AT\$GPSAT?</b>	Read command returns the current value of <type> in the format:
<b>AT\$GPSAT=?</b>	Test command reports the range of supported values for parameter <type>
Example	AT\$GPSAT=1 OK
Note	<p>The command is available in “controlled mode” only (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>This command is currently available for SIRF-based GPS modules (JF2 and JN3) only, i.e. whenever is AT\$GPSD=2.</p> <p>This command must be issued only when the GPS receiver is operating in Full Power Mode (see <b>\$GPSPS</b>), otherwise it might have no effect (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>Since the <b>AT\$GPSAT</b> command performs a hardware reconfiguration of the GPS receiver, the issuing of two consecutive <b>AT\$GPSAT</b> commands should be avoided, otherwise the reconfiguration might fail: an <b>ERROR</b> is returned in the latter case (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>If the &lt;type&gt; parameter has been set to 1, the External GPS Antenna LNA is directly driven by the GPS receiver according to its current power mode (i.e. the External GPS Antenna LNA is turned off whenever the GPS receiver is in power saving mode) (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <p>Please refer to the HW User Guide for the compatible GPS antennas and their usage</p>

### 3.5.7.16.6. GPS Antenna Supply Voltage Readout - \$GPSAV

\$GPSAV - GPS Antenna Supply Voltage Readout		SELINT 2
AT\$GPSAV	Execution command returns the measured GPS antenna's supply voltage in mV	
AT\$GPSAV?	Read command has the same meaning as the Execution command	
AT\$GPSAV=?	Test command returns the <b>OK</b> result code	
Example	AT\$GPSAV \$GPSAV:3800 OK	
Note	It has meaning only if current \$GPSAT setting is not 0	

### 3.5.7.16.7. GPS Antenna Current Readout - \$GPSAI

\$GPSAI - GPS Antenna Current Readout		SELINT 2
AT\$GPSAI	Execution command reports the GPS antenna's current consumption in the format:  \$GPSAI:<value>[,<status>]  where: <value> - the measured current in mA <status> 0 - GPS antenna OK 1 - GPS antenna consumption out of the limits  Note: the output <status> is available only if the antenna protection is activated (see \$GPSAP)	
AT\$GPSAI?	Read command has the same meaning as the Execution command	
AT\$GPSAI=?	Test command returns the <b>OK</b> result code	
Example	AT\$GPSAI? \$GPSAI:040,0 OK	
Note	It has meaning only if current \$GPSAT setting is not 0	

### 3.5.7.16.8. GPS Antenna Protection - \$GPSAP

\$GPSAP - GPS Antenna Protection		SELINT 2
AT\$GPSAP=<set>[,<value>]	Set command allows to activate an automatic protection in case of high current consumption of GPS antenna. The protection disables the GPS antenna supply voltage.  Parameters: <set> 0 - deactivate current antenna protection (default) 1 - activate current antenna protection	

\$GPSAP - GPS Antenna Protection		SELINT 2
	<p>&lt;value&gt; - the antenna current limit value in mA 0..200</p> <p>The parameter &lt;value&gt; has meaning only if parameter &lt;set&gt;=1, otherwise it is not accepted.</p> <p>Note: the new setting is stored through \$GPSSAV</p>	
AT\$GPSAP?	Read command reports the current activation status of antenna automatic protection and the current antenna limit value, in the format:	
AT\$GPSAP=?	\$GPSAP: <set>,<value>	
Example	<p>Test command reports the range of supported values for parameters &lt;set&gt; and &lt;value&gt;</p> <p>AT\$GPSAP=0 OK</p> <p><i>Note : no SW control on antenna status (HW current limitation only)</i></p> <p>AT\$GPSAP=1,25 OK</p> <p><i>activate current antenna protection with related current limit</i></p> <p>AT\$GPSAP? \$GPSAP:1,50 OK</p> <p><i>Antenna protection activated with 50mA limit</i></p>	
Note	The module is already provided of an Hardware protection for the high current consumption that is automatically activated if the consumption exceeds 50mA	

### 3.5.7.16.9. GPS NMEA Serial Port Speed - \$GPSS

\$GPSS - GPS Serial Port Speed		SELINT 2
AT\$GPSS=<speed>	<p>Set command allows to select the speed of the NMEA serial port.</p> <p>Parameter: &lt;speed&gt; 4800 - (default) 9600 19200 38400 57600</p>	
	<p>Note: the new setting is stored through \$GPSSAV</p>	
AT\$GPSS?	Read command returns the current serial ports speed in the format:	
	\$GPSS: <speed>	
AT\$GPSS=?	Test command returns the available range for <speed>	

### 3.5.7.16.10. Unsolicited NMEA Data Configuration - \$GPSNMUN

\$GPSNMUN - Unsolicited NMEA Data Configuration		SELINT 2
AT\$GPSNMUN= <enable> [,<GGA>,<GLL>, <GSA>,<GSV>, <RMC>,<VTG >]	<p>Set command permits to activate an Unsolicited streaming of GPS data (in NMEA format) through the standard GSM serial port and defines which NMEA sentences will be available</p> <p>Parameters:</p> <p>&lt;enable&gt;</p> <ul style="list-style-type: none"> <li>0 - NMEA data stream de-activated (default)</li> <li>1 - NMEA data stream activated with the following unsolicited response syntax: <b>\$GPSNMUN:&lt;CR&gt;&lt;NMEA SENTENCE&gt;&lt;CR&gt;</b></li> <li>2 - NMEA data stream activated with the following unsolicited response syntax: <b>&lt;NMEA SENTENCE&gt;&lt;CR&gt;</b></li> <li>3 - dedicated NMEA data stream; it is not possible to send AT commands; with the escape sequence ‘+++’ the user can return to command mode</li> </ul> <p>&lt;GGA&gt; - Global Positioning System Fix Data 0 - disable (default) 1 - enable</p> <p>&lt;GLL&gt; - Geographical Position - Latitude/Longitude 0 - disable (default) 1 - enable</p> <p>&lt;GSA&gt; - GPS DOP and Active Satellites 0 - disable (default) 1 - enable</p> <p>&lt;GSV&gt; - GPS/GLONASS Satellites in View 0 - disable (default) 1 - enable</p> <p>&lt;RMC&gt; - recommended Minimum Specific GPS Data 0 - disable (default) 1 - enable</p> <p>&lt;VTG&gt; - Course Over Ground and Ground Speed 0 - disable (default) 1 - enable</p>	
AT\$GPSNMUN?	Read command returns whether the unsolicited GPS NMEA data streaming is currently enabled or not, along with the NMEA sentences availability status, in the format:	
		<b>\$GPSNMUN:&lt;enable&gt;,&lt;GGA&gt;,&lt;GLL&gt;,&lt;GSA&gt;,&lt;GSV&gt;,&lt;RMC&gt;,&lt;VTG &gt;</b>
AT\$GPSNMUN=?	Test command returns the supported range of values for parameters <enable>, <GGA>, <GLL>, <GSA>, <GSV>, <RMC>, <VTG>	
Example	<pre>AT\$GPSNMUN=1,0,0,1,0,0,0 OK These sets the GSA as available sentence in the unsolicited message</pre> <pre>AT\$GPSNMUN=0 OK Turn-off the unsolicited mode</pre>	

\$GPSNMUN - Unsolicited NMEA Data Configuration		SELINT 2
	<pre>AT\$GPSNMUN? \$GPSNMUN: 1,0,0,1,0,0,0 OK Give the current frame selected (GSA)</pre> <p>The unsolicited message will be:</p> <pre>\$GPSNMUN: \$GPGSA,A,3,23,20,24,07,13,04,02,,,,,,2.4,1.6,1.8*3C</pre>	
Reference	NMEA 01803 Specifications	
Note	<p><i>The command is available in “Controlled Mode” only</i></p> <p><i>The available NMEA Sentences are depending on the GPS receiver used</i></p> <p>SIRF-based GPS modules (e.g. JF2, JN3):</p> <p><i>In GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS the fields PDOP and VDOP are not available</i></p> <p>ST-based GPS modules (e.g. SL869):</p> <p><i>The current firmware versions 3.1.2.1 and 3.1.3.1 of the SL869 do not relay GLL and VTG NMEA sentences.</i></p> <p><i>When the &lt;GSV&gt; parameter is enabled the \$GPGSV NMEA sentence is reported along with the \$GLGSV one for the GLONASS satellites.</i></p>	

### 3.5.7.16.11. Get Acquired Position - \$GPSACP

\$GPSACP - Get Acquired Position		SELINT 2
AT\$GPSACP	<p>Execution command returns information about the last GPS position in the format:</p> <pre>\$GPSACP: &lt;UTC&gt;,&lt;latitude&gt;,&lt;longitude&gt;,&lt;hdop&gt;,&lt;altitude&gt;, &lt;fix&gt;,&lt;cog&gt;,&lt;spkm&gt;,&lt;spkn&gt;,&lt;date&gt;,&lt;nSAT&gt;</pre> <p>where:</p> <p>&lt;UTC&gt; - UTC time (hhmmss.sss) referred to GGA sentence</p> <p>&lt;latitude&gt; - format is ddmm.mmmm N/S (referred to GGA sentence)</p> <p>where:</p> <p>dd - degrees 00..90</p> <p>mm.mmmm - minutes 00.0000..59.9999</p> <p>N/S: North / South</p>	

\$GPSACP - Get Acquired Position		SELINT 2
	<p>&lt;longitude&gt; - format is dddmm.mmmm E/W (referred to GGA sentence)          where:          ddd - degrees          000..180          mm.mmmm - minutes          00.0000..59.9999          E/W: East / West</p> <p>&lt;hdop&gt; - x.x - Horizontal Dilution of Precision (referred to GGA sentence)</p> <p>&lt;altitude&gt; - x.x Altitude - mean-sea-level (geoid) in meters (referred to GGA sentence)</p> <p>&lt;fix&gt; -          0 - Invalid Fix          2 - 2D fix          3 - 3D fix</p> <p>&lt;cog&gt; - ddd.mm - Course over Ground (degrees, True) (referred to VTG sentence)          where:          ddd - degrees          000..360          mm - minutes          00..59</p> <p>&lt;spkm&gt; - x.x Speed over ground (Km/hr) (referred to VTG sentence)</p> <p>&lt;spkn&gt; - x.x- Speed over ground (knots) (referred to VTG sentence)</p> <p>&lt;date&gt; - ddmmmyy Date of Fix (referred to RMC sentence)          where:          dd - day          01..31          mm - month          01..12          yy - year          00..99 - 2000 to 2099</p> <p>&lt;nst&gt; - nn - Total number of satellites in use (referred to GGA sentence)          00..12</p>	
AT\$GPSACP?	Read command has the same meaning as the Execution command	
AT\$GPSACP=?	Test command returns the <b>OK</b> result code	
Example	<pre>AT\$GPSACP \$GPSACP:080220.479,4542.82691N,01344.26820E,259.07,3,2.1,0.1,0.0,0.0 ,270705,09  OK</pre>	
Note	If the GPS is turned off or its serial line is not physically connected to the GSM, the answer might be empty as shown below.	
	<pre>AT\$GPSACP \$GPSACP:  OK</pre>	

<b>\$GPSACP - Get Acquired Position</b>	<b>SELINT 2</b>
	The command is available in “Controlled Mode” only (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)

### 3.5.7.16.12. Direct Access to GPS Module - \$GPSCON

<b>\$GPSCON - Direct Access to GPS Module</b>	<b>SELINT 2</b>
<b>AT\$GPSCON</b>	<p>Execution command allows setting the GSM baseband in transparent mode in order to have a direct access to the serial port of the GPS module. The GSM module will transfer directly the received data to the GPS module, without checking or elaborating them.</p> <p>Note: the command is usable only in “controlled mode”.</p> <p>Note: in case of an incoming call from GSM, this will be visible on the RING pin of serial port.</p> <p>Note: the escape sequence is “+++”</p> <p>The suggested Serial Port Speed for GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS is 57600. (SiRF-based modules only, e.g. JF2 and JN3)</p>
<b>AT\$GPSCON=?</b>	Test command returns the <b>OK</b> result code

### 3.5.7.16.13. Set The GPS Module In Programming Mode - \$GPSPRG

<b>\$GPSPRG - Set The GPS Module In Programming Mode</b>	<b>SELINT 2</b>
<b>AT\$GPSPRG</b>	<p>Execution command allows to switch on the GPS part in BOOT mode and set the GSM processor in Transparent Mode, in order to permit the re-programming of the GPS flash memory.</p> <p>Note: the escape sequence is “+++”</p> <p>Note: it is possible to issue <b>\$GPSPRG</b> only if the Serial Port Speed is fixed 38400 bps</p>
<b>AT\$GPSPRG?</b>	Read command has the same effect as Execution command.
<b>AT\$GPSPRG=?</b>	Test command returns the <b>OK</b> result code

### 3.5.7.16.14. Set The GPS Module In Power Saving Mode - \$GPSPS

\$GPSPS - Set The GPS Module In Power Saving Mode		SELINT 2
AT\$GPSPS= <mode> [,<PTF_Period>]	<p>Set command allows setting the GPS module in Power saving mode.</p> <p>Parameters:</p> <p>&lt;mode&gt; - the GPS receiver can operate in three modes (four in GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS)</p> <ul style="list-style-type: none"> <li>0 - full power mode, power saving disabled (default); it is the standard operating mode; power is supplied to the receiver continuously and the GPS receiver continues to operate without an interrupt.</li> <li>1 - tricklepower mode; the power to the SiRF chipset is cycled periodically, so that it operates only a fraction of the time; power is applied only when a position fix is scheduled.</li> <li>2 - push-to-fix mode; the GPS receiver is generally off, but turns on frequently enough to collect ephemeris data to maintain the GPS real-time clock calibration so that, upon user request, a position fix can be provided quickly after power-up.</li> <li>3 - micro power mode (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS only); a direct transition is requested to the Micro Power Management low power mode as soon as sufficient ephemeris data is available and a valid navigation position solution is calculated at near zero user velocity.</li> </ul> <p>&lt;PTF_Period&gt; - push-to-fix period, numeric value in secs; when mode is push-to-fix, the receiver turns on periodically according to this parameter; default value is 1800 sec. This parameter has meaning only when &lt;mode&gt;=2</p>	
AT\$GPSPS?	Read command returns the current power saving mode and push-to-fix period, in the format:	
	\$GPSPS: <mode>,<PTF_Period>	
AT\$GPSPS=?	Test command returns the available range for <mode> and <PTF_Period>	
Note	<p>Available in “controlled mode” only</p> <p>This command is currently available for SIRF-based GPS modules (JF2 and JN3) only, i.e. whenever is AT\$GPSD=2.</p>	

### 3.5.7.16.15. Wake Up GPS From Power Saving Mode - \$GPSWK

\$GPSWK - Wake Up GPS From Power Saving Mode		SELINT 2
AT\$GPSWK	Execution command allows to wake up the GPS module if set in sleeping mode due	

\$GPSWK - Wake Up GPS From Power Saving Mode		SELINT 2
	<p>to power saving.</p> <p>Note: if the GPS module is in tricklepower mode, it will start up, make the fix and then continue to work in power saving mode.</p> <p>Note: if the GPS module is in push-to-fix mode, issuing <b>\$GPSWK</b> permits to wake up it before the push to fix period; after the new fix the GPS module will return in push-to-fix mode with the same parameters.</p> <p>Note: if the GPS module is in micro power mode, it will be set to full power mode (same as issuing AT\$GPSPS=0 command). (GE864-GPS, GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS only)</p>	

### 3.5.7.16.16. Save GPS Parameters Configuration - \$GPSSAV

\$GPSSAV - Save GPS Parameters Configuration		SELINT 2
AT\$GPSSAV	Execution command stores the current GPS parameters in the NVM of the device.	
AT\$GPSSAV=?	Test command returns the <b>OK</b> result code	
Example	AT\$GPSSAV OK	
Note	The module must be restarted to use the new configuration	

### 3.5.7.16.17. Restore To Default GPS Parameters - \$GPSRST

\$GPSRST - Restore To Default GPS Parameters		SELINT 2
AT\$GPSRST	Execution command resets the GPS parameters to “Factory Default” configuration and stores them in the NVM of the device.	
AT\$GPSRST=?	Test command returns the <b>OK</b> result code	
Example	AT\$GPSRST OK	
Note	The module must be restarted to use the new configuration	

### 3.5.7.16.18. GPS Controller Disabling - \$GPSCMODE

\$GPSCMODE - GPS Controller Disabled at Start-up With Charger Inserted		SELINT 2
AT\$GPSCMODE=<n>	Execution command allows to keep off the GPS controller when the module is woken up by charger insertion.  The GPS controller can be turned on by AT\$GPSP=1.	

\$GPSCMODE - GPS Controller Disabled at Start-up With Charger Inserted		SELINT 2
	Parameter: <b>&lt;n&gt;</b> 0 – GPS controller on at start-up (factory default) 1 – GSP controller off at start-up with charger inserted	
Note: the new setting is stored through \$GPSSAV		
AT\$GPSCMODE ?	Read command reports whether GPS controller is enabled or not when the module is turned on by the charger insertion, in the format:  \$GPSCMODE : <n>	
AT\$GPSCMODE =?	reports the supported values for <n> parameter..	

### 3.5.7.16.19. Get SGEE File for SiRFInstantFix™ - \$FTPGETIFIX

\$FTPGETIFIX – Get SGEE File for SiRFInstantFix™		SELINT 2
AT\$FTPGETIFIX= <filename>, <filesize>	Execution command, issued during an FTP connection, opens a data connection, downloads a SGEE file from the FTP server and injects it into SiRF StarIV.  Parameters: <b>&lt;filename&gt;</b> - file name, string type <b>&lt;filesize&gt;</b> - SGEE file size in bytes  Note: whenever an FTP connection has not been opened yet, an <b>ERROR</b> result code is returned  Note: whenever an error happens during the SGEE file injection stage, an <b>ERROR</b> result code is returned In this case the possible <err> values reported by +CME ERROR (numeric format followed by verbose format) may be:  920 SGEE update initialization stage failed 921 SGEE file is not newer than the last stored one 922 SGEE update generic error  Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.	
AT\$FTPGETIFIX=?	Test command returns the <b>OK</b> result code	
Example	AT\$FTPGETIFIX="packedDifference.f2p3enc.ee",30970 OK  AT\$FTPGETIFIX="packedDifference.f2p1enc.ee",10742 +CME ERROR: SGEE file is not newer than the last stored one	

Note	The Command is available in “Controlled Mode” only
------	--

### 3.5.7.16.20. Get SGEE File for SiRFInstantFix™ - \$HTTPGETIFIX

\$HTTPGETIFIX – Get SGEE File for SiRFInstantFix™		SELINT 2
AT\$HTTPGETIFIX= <prof_id>, <filesize>	Execution command, issued during an HTTP connection, downloads a SGEE file from the HTTP server and injects it into the SiRF StarIV, after a HTTP query using a specific Profile Id, GET option, SGEE file name has been sent.	
Parameters: <prof_id> - Numeric parameter indicating the profile identifier. Range: 0-2 <filesize> - SGEE file size in bytes		
Note: whenever an HTTP configuration has not been done yet, an <b>ERROR</b> result code is returned		
Note: whenever an error happens during the SGEE file injection stage, an <b>ERROR</b> result code is returned In this case the possible <err> values reported by +CME ERROR (numeric format followed by verbose format) may be:		
920 SGEE update initialization stage failed 921 SGEE file is not newer than the last stored one 922 SGEE update generic error		
AT\$HTTPGETIFIX=?	Test command returns the <b>OK</b> result code	
Example	AT\$HTTPGETIFIX=0,30970 OK  AT\$HTTPGETIFIX=0,10742 +CME ERROR: SGEE file is not newer than the last stored one	
Note	The Command is available in “Controlled Mode” only	

### 3.5.7.16.21. GPIO Configuration for GPS control - \$GPSGPIO

\$GPSGPIO – GPIO Configuration for GPS control		SELINT 2
AT\$GPSGPIO= <on_off>,	Execution command sets the GPIO pins to be used to drive JF2 (SE868), JN3 (SL868) and SL869 GNSS modules.	

<pre>&lt;system_on&gt;, &lt;boot&gt;, &lt;reset&gt;</pre>	<p>Parameters:</p> <p>&lt;on_off&gt; - GPIO pin number to be used to drive the JF2/JN3/SL869's ON-OFF signal (default = 4)</p> <p>&lt;system_on&gt; - GPIO pin number to be used to drive the JF2's SYSTEM-ON signal (default = 5)</p> <p>&lt;boot&gt; - GPIO pin number to be used to drive the Flash/JN3-Flash/SL869's BOOT signal (default= 6)</p> <p>&lt;reset&gt; - GPIO pin number to be used to drive the Flash/JN3-Flash's RESET signal (default = 7)</p> <p>Note: the GPIO configuration specified through this command must be coherent with the specific GNSS module that has to be used, i.e. the configuration specified through the AT\$GPSSD command. Therefore the GPIOs corresponding to unnecessary signals (e.g. &lt;system_on&gt;, &lt;boot&gt; and &lt;reset&gt; for a JN3-ROM) should be set to zero: this allows to reserve and use the minimum number of GPIOs.</p> <p>Note: See the GE865-QUAD, GE865-DUAL, GL865-QUAD, GL865-DUAL, GL868-QUAD, GL868-DUAL, GE910-QUAD and GE910-GNSS Hardware User Guide to check the number of available GPIO pins.</p> <p>Note: the GPIO configuration correctness and functionality (i.e. possible conflicts with the GPIO configuration applied through <b>AT#GPSGPIO</b>) are under the customer's sole responsibility.</p>
<b>AT\$GPSSAV?</b>	<p>Note: the current GPIO configuration can be stored through <b>AT\$GPSSAV</b></p>
<b>AT#GPSGPIO?</b>	<p>Read command reports the currently selected configuration in the format:</p>
<b>AT#GPSGPIO=?</b>	<p><b>\$GPSGPIO: &lt;on_off&gt;,&lt;system_on&gt;,&lt;boot&gt;,&lt;reset&gt;</b></p>
Example	<p>- For a JF2-Flash (AT\$GPSSD=2,0):</p> <p>AT\$GPSSGPIO=4,5,6,7 OK</p> <p>AT\$GPSSGPIO? \$GPSGPIO: 4,5,6,7</p> <p>OK</p> <p>- For a JF2-ROM (AT\$GPSSD=2,1):</p> <p>AT\$GPSSGPIO=4,5,0,0 OK</p> <p>OR</p>

	AT\$GPIO=4,5,6,7 OK  AT\$GPIO? \$GPIO: 4,5,0,0  OK  - For a JF3-ROM (AT\$GPD=3,1):  AT\$GPIO=4,0,0,0 OK  OR  AT\$GPIO=4,5,6,7 OK  AT\$GPIO? \$GPIO: 4,0,0,0  OK
Note	The Command is available in “Controlled Mode” only

### 3.5.7.16.22. GPS SiRFInstantFix™ - \$GPSIFIX

\$GPSIFIX – GPS SiRFInstantFix™	SELINT 2
<b>AT\$GPSIFIX=</b> <b>&lt;enable&gt;[,</b> <b>&lt;cgee&gt;,</b> <b>&lt;sgee&gt;[,</b> <b>&lt;update&gt;]]</b>	Set command enables/disables SiRFInstantFix™ feature available on SiRF StarIV based modules.  Parameters: <b>&lt;enable&gt;</b> - SiRFInstantFix Usage 0 – Disable (default) 1 – Enable <b>&lt;cgee&gt;</b> - Client Generated Extended Ephemeris (CGEE) 0 – Disable 1 – Enable (default) <b>&lt;sgee&gt;</b> - Server Generated Extended Ephemeris (SGEE) 0 – Disable (default) 1 – Enable <b>&lt;update&gt;</b> - SGEE File Update Mode 0 – Upon Aiding Data Requests coming from GPS chip

	<p>1..168 – Update rate in hours (168 is the max update rate in case of 7-days SGEE files usage)</p> <p>Note: SiRFInstantFix parameters are stored in NVM, along with all current GPS parameters, if <b>OK</b> is returned (same as AT\$GPSSAV)</p> <p>Note: if <b>&lt;enable&gt;=0</b>, the rest of parameters must be omitted otherwise <b>ERROR</b> is returned</p> <p>Note: if <b>&lt;enable&gt;=1</b> and the rest of parameters is omitted, the default configuration, or a previous stored one, is used</p> <p>Note: if <b>&lt;sgee&gt;=1</b>, the <b>&lt;update&gt;</b> parameter must be set otherwise <b>ERROR</b> is returned</p> <p>Note: if <b>&lt;sgee&gt;=1</b> the following URC is used to warn, according to the <b>&lt;update&gt;</b> value, that the SGEE file has to be updated:</p> <p><i>\$SIFIXEV: SGEE File Update Requested</i></p> <p>Note: If <b>&lt;sgee&gt;=0</b>, the <b>&lt;update&gt;</b> parameter must be omitted otherwise <b>ERROR</b> is returned</p> <p>Note: SiRFInstantFix default configuration may be restored by issuing the AT\$GPSRST command</p>
AT\$GPSIFIX?	Read command reports the currently selected SiRFInstantFix configuration in the format: <b>\$GPSIFIX: &lt;enable&gt;[,&lt;cgee&gt;,&lt;sgee&gt;[,&lt;update&gt;]]</b>
AT\$GPSIFIX=?	Test command reports the supported range of values for parameters <b>&lt;enable&gt;, &lt;cgee&gt;, &lt;sgee&gt;, &lt;update&gt;</b>
Example	<pre>AT\$GPSIFIX=0 OK</pre> <pre>AT\$GPSIFIX=1,1,0 OK</pre>
Note	The Command is available in “Controlled Mode” only

### 3.5.7.16.23. Set the GPS serial port speed - \$GPSSERSPEED

<b>\$GPSSERSPEED – Set the GPS serial port speed</b>		<b>SELINT 2</b>
<b>AT\$GPSSERSPEED=&lt;speed&gt;</b>	Execution command set the GPS serial port communication speed.  Parameters: <b>&lt;speed&gt;</b> - 4800(default)	

\$GPSERSPEED – Set the GPS serial port speed		SELINT 2
	9600	
	Note: This command can be used with SIRF-based GPS modules only, such as JF2 and JN3 ( <b>AT\$GPSD=2</b> , <b>AT\$GPSD=2,1</b> or <b>AT\$GPSD=2,2</b> ).  Note: the current setting is stored through <b>\$GPSSAV</b> .  Note: The module must be restarted to use the new configuration	
AT\$GPSERSPEED?	Read command returns the selected serial speed in the format  <b>\$GPSERSPEED: &lt;speed&gt;</b>	
AT\$GPSERSPEED=?	Test command returns the available range for <speed>	
Example	AT#GPSERSPEED = 4800 OK	

### 3.5.7.16.24. Delete Patch from NVM - \$DPATCH

\$DPATCH – Delete Patch from NVM		SELINT 2
AT\$DPATCH=<patch_file_name>	Execution command deletes a SiRF software patch stored onto the module's flash memory.  Parameters: <patch_file_name> - name of the file in NVM, string type (max 16 chars, case sensitive).  The execution command returns OK.	
	Note: This command can be used with SIRF ROM-based GPS modules only ( <b>AT\$GPSD=2,1</b> or <b>AT\$GPSD=2,2</b> ).	
AT\$DPATCH=?	Test command returns the <b>OK</b> result code	
Example	AT#DPATCH = "GSD4E_4.1.3.pd2" OK	

### 3.5.7.16.25. Enable Patch - \$EPATCH

\$EPATCH – Enable Patch		SELINT 2
AT\$EPATCH=<patch_file_name>	Execution command allows enabling the usage of the SiRF software patch saved onto the module's flash memory.	

\$EPATCH – Enable Patch		SELINT 2
	<p>Parameters:</p> <p>&lt;patch_file_name&gt; - name of the file in NVM, string type (max 16 chars, case sensitive).</p> <p>The execution command returns OK but the patching is confirmed by the following unsolicited:</p> <ul style="list-style-type: none"> <li>- “Patch Manager: Patched.”</li> </ul> <p>Other unsolicited messages can be due to errors occurred during the patching procedure or patch storage errors:</p> <ul style="list-style-type: none"> <li>- “Patch Manager: Error opening Patch File.”</li> <li>- “Patch Manager: Error processing Patch File.”</li> <li>- “Patch Manager: Error on Start Request.”</li> <li>- “Patch Manager: Error on Load Request.”</li> <li>- “Patch Manager: Error on Exit Request.”</li> </ul> <p>Note: This command can be used with SIRF ROM-based GPS modules only (AT\$GPSD=2,1 or AT\$GPSD=2,2).</p> <p>Note: The patch file must have a “.pd2” extension.</p> <p>Note: If the &lt;patch_file_name&gt; is omitted, the use of the software patch is disabled.</p>	
AT\$EPATCH?	Read command display the patch in use in the format:	
AT\$EPATCH=?	Test command returns the OK result code	
Example	<pre>AT#EPATCH = "GSD4E_4.1.3.pd2" OK  Patch Manager: Patched.  -The Sirf GPS module has been patched</pre>	

### 3.5.7.16.26. List Available Patch - \$LPATCH

\$LPATCH – List Available Patch		SELINT 2
AT\$LPATCH	Execution command displays the available SiRF software patch saved onto the module's flash memory.	<p>Note: This command can be used with SIRF ROM-based GPS modules only (AT\$GPSD=2,1 or AT\$GPSD=2,2).</p>

\$LPATCH – List Available Patch		SELINT 2
		Note: The patch file must have a “.pd2” extension.
<b>AT\$LPATCH=?</b>	Test command returns the <b>OK</b> result code	
Example	AT\$LPATCH #LSCRIPT: "GSD4E_4.1.3.pd2", 5472 OK	

### 3.5.7.16.27. Write Patch on flash - \$WPATCH

\$WPATCH – Write Patch on flash		SELINT 2
AT\$WPATCH=<patch_file_name>,<size>	<p>Execution command allows storing a SiRF software patch onto the module's flash memory.</p> <p>&gt;</p> <p>The file should be sent using RAW ASCII file transfer. It is important to set properly the port settings. In particular: Flow control: hardware. Baud rate: 115200 bps</p> <p>Parameters:</p> <p>&lt;patch_file_name&gt; - name of the file in NVM, string type (max 16 chars, case sensitive). &lt;size&gt; - file size in bytes</p> <p>The device shall prompt a three character sequence &lt;greater_than&gt;&lt;greater_than&gt;&lt;greater_than&gt; (IRA 62, 62, 62) then the command line is terminated with a &lt;CR&gt;; after that a file can be sent from TE, sized &lt;size&gt; bytes.</p> <p>The operations completes when all the bytes are received.</p> <p>If writing ends successfully, the response is OK; otherwise an error code is reported.</p> <p>Note: This command can be used with SIRF ROM-based GPS modules only (AT\$GPSD=2,1 or AT\$GPSD=2,2).</p> <p>Note: The patch file must have a “.pd2” extension.</p>	
<b>AT\$WPATCH=?</b>	Test command returns the <b>OK</b> result code	
Example	AT#WPATCH = "GSD4E_4.1.3.pd2", 5472 >>> here receive the prompt: depending on your editor settings it's possible that the prompt overrides the above line; then type	

<b>\$WPATCH – Write Patch on flash</b>	<b>SELINT 2</b>
	or send the patch, sized 54 bytes OK  Patch has been stored.

### 3.5.7.17. SAP AT Commands Set

#### 3.5.7.17.1. Remote SIM Enable - #RSEN

<b>#RSEN – Remote SIM Enable</b>	<b>SELINT 2</b>
<b>AT#RSEN=&lt;mode&gt;</b> [,<sapformat> [,<role> [,<muxch> [,<beacon> [,<scriptmode>]]]]	<p>Set command is used to enable/disable the <b>Remote SIM</b> feature. The command returns <b>ERROR</b> if requested on a non multiplexed interface</p> <p>Parameter:</p> <ul style="list-style-type: none"> <li>&lt;mode&gt;</li> <li>0 - disable</li> <li>1 - enable</li> </ul> <p>&lt;sapformat&gt;</p> <ul style="list-style-type: none"> <li>1 - binary SAP (default)</li> </ul> <p>&lt;role&gt;</p> <ul style="list-style-type: none"> <li>0 - remote SIM Client (default)</li> </ul> <div style="background-color: #e0e0e0; padding: 5px;"> <ul style="list-style-type: none"> <li>• If the ME doesn't support the Easy Script Extension® or</li> <li>• &lt;scriptmode&gt; is omitted or</li> <li>• &lt;scriptmode&gt; is 0</li> </ul> </div> <p>&lt;muxch&gt; - MUX Channel Number; mandatory if &lt;mode&gt;=1 1..3</p> <p>If the ME support the Easy Script Extension® and &lt;scriptmode&gt; is 1</p> <p>&lt;muxch&gt; - MDM interface number in scripts; mandatory if &lt;mode&gt;=1 1 - MDM interface 2 - MDM2 interface</p> <p>&lt;beacon&gt; - retransmition timer of SAP Connection Request 0 - only one transmition (default) 1..100 - timer interval in seconds.</p> <p>&lt;scriptmode&gt; - script mode enable; setting this subparameter has a meaning only if the ME supports the Easy Script® Extension 0 - disable script mode (see subparameter &lt;muxch&gt;) 1 - enable script mode (see subparameter &lt;muxch&gt;)</p> <p>Note: enabling the <b>Remote SIM</b> feature when the SIM is already inserted causes the module to:</p>

#RSEN – Remote SIM Enable	SELINT 2
	<ul style="list-style-type: none"> <li>• de-register from the actual network</li> <li>• de-initialize the current SIM.</li> </ul> <p>Note: issuing the command on a not multiplexed interface (see +CMUX) cause an <b>ERROR</b> to be raised in all the situations except when:</p> <ul style="list-style-type: none"> <li>• the ME supports the Easy Script Extension® and</li> <li>• &lt;scriptmode&gt; is 1</li> </ul> <p>Note: if the <b>Remote SIM</b> feature has been activated the SAP connection status is signalled with the following URC:</p> <p><b>#RSEN: &lt;conn&gt;</b>  where  &lt;conn&gt; - connection status  0 - disconnected  1 - connected</p>
AT#RSEN?	Read command returns the SAP connection status in the format:  <b>#RSEN: &lt;conn&gt;</b> where <conn> - connection status, as before
AT#RSEN=?	Test command reports the range of values for all the parameters.

### 3.5.7.18. Telefonica OpenGate M2M AT Commands Set

For more detailed information about the AT commands dedicated for Telefonica Open Gate M2M protocol handling please consult the OpenGate M2M Protocol User Guide.

### 3.5.7.19. Audio Commands

These are not the only audio commands available. See par. 3.5.4.4.

#### 3.5.7.19.1. Audio Basic configuration

##### 3.5.7.19.1.1. Change Audio Path - #CAP

#CAP - Change Audio Path	SELINT 0 / 1
AT#CAP[=<n>]]	Set command switches the active audio path depending on parameter <n> Parameter: <n> - audio path

#CAP - Change Audio Path	SELINT 0 / 1
	<p>0 - audio path follows the <b>AXE</b> input (factory default):</p> <ul style="list-style-type: none"> <li>• if <b>AXE</b> is low, handsfree is enabled;</li> <li>• if <b>AXE</b> is high, internal path is enabled</li> </ul> <p>1 - enables handsfree external mic/ear audio path</p> <p>2 - enables internal mic/ear audio path</p> <p>Note: The audio path are mutually exclusive, enabling one disables the other.</p> <p>Note: when changing the audio path, the volume level is set at the previously stored value for that audio path (see <b>+CLVL</b>).</p> <p>Note: issuing <b>AT#CAP&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT#CAP=&lt;CR&gt;</b> is the same as issuing the command <b>AT#CAP=0&lt;CR&gt;</b>.</p>
<b>AT#CAP?</b>	Read command reports the active audio path in the format:  <b>#CAP: &lt;n&gt;.</b>
<b>AT#CAP=?</b>	Test command reports the supported values for the parameter <b>&lt;n&gt;</b> .

#CAP – Change Audio Path	SELINT 2
<b>AT#CAP[=&lt;n&gt;]]</b>	<p>Set command switches the active audio path depending on parameter <b>&lt;n&gt;</b></p> <p>Parameter:</p> <p><b>&lt;n&gt;</b> - audio path</p> <p>0 - audio path follows the <b>AXE</b> input (factory default):</p> <ul style="list-style-type: none"> <li>• if <b>AXE</b> is low, handsfree is enabled;</li> <li>• if <b>AXE</b> is high, internal path is enabled</li> </ul> <p>1 - enables handsfree external mic/ear audio path</p> <p>2 - enables internal mic/ear audio path</p> <p>Note: The audio path are mutually exclusive, enabling one disables the other.</p> <p>Note: when changing the audio path, the volume level is set at the previously stored value for that audio path (see <b>+CLVL</b>).</p> <p>Note: #CAP=1 is not available for GE865-QUAD despite it is accepted, because GE865-QUAD has only one audio path.</p>
<b>AT#CAP?</b>	Read command reports the active audio path in the format:  <b>#CAP: &lt;n&gt;.</b>
<b>AT#CAP=?</b>	Test command reports the supported values for the parameter <b>&lt;n&gt;</b> .

### 3.5.7.19.1.2. AXE Pin Reading - #AXE

#AXE - AXE Pin Reading	SELINT 2
<b>AT#AXE</b>	Execution command causes the ME to return the current state of <b>AXE</b> pin in the format:  <b>#AXE: &lt;state&gt;</b>  where: <b>&lt;state&gt;</b> 0 - <b>Low</b> ..1 - <b>High</b>
<b>AT#AXE=?</b>	Test command returns the <b>OK</b> result code.

### 3.5.7.19.1.3. Select Ringer Sound - #SRS

#SRS - Select Ringer Sound	SELINT 0 / 1
<b>AT#SRS[= &lt;n&gt;,&lt;tout&gt;]</b>	<p>Set command sets the ringer sound.</p> <p>Parameters:</p> <p>&lt;n&gt; - ringing tone 0 - current ringing tone 1..max - ringing tone number, where <i>max</i> can be read by issuing the Test command <b>AT#SRS=?</b>.</p> <p>&lt;tout&gt; - ringing tone playing time-out in seconds. 0 - ringer is stopped (if present) and current ringer sound is set. 1..60 - ringer sound playing for &lt;tout&gt; seconds and, if &lt;n&gt; &gt; 0, ringer sound &lt;n&gt; is set as default ringer sound.</p> <p>Note: when the command is issued with &lt;n&gt; &gt; 0 and &lt;tout&gt; &gt; 0, the &lt;n&gt; ringing tone is played for &lt;tout&gt; seconds and stored as default ringing tone.</p> <p>Note: if command is issued with &lt;n&gt; &gt; 0 and &lt;tout&gt; = 0, the playing of the ringing is stopped (if present) and &lt;n&gt; ringing tone is set as current.</p> <p>Note: if command is issued with &lt;n&gt; = 0 and &lt;tout&gt; &gt; 0 then the current ringing tone is played.</p> <p>Note: if both &lt;n&gt; and &lt;tout&gt; are 0 then the default ringing tone is set as current and ringing is stopped.</p> <p>Note: If all parameters are omitted then the behaviour of Set command is the same as Read command</p>
<b>AT#SRS?</b>	Read command reports current selected ringing and its status in the form:  <b>#SRS: &lt;n&gt;,&lt;status&gt;</b>

<b>#SRS - Select Ringer Sound</b>	<b>SELINT 0 / 1</b>
	<p>where:</p> <p>&lt;n&gt; - ringing tone number 1..max</p> <p>&lt;status&gt; - ringing status 0 - selected but not playing 1 - currently playing</p>
<b>AT#SRS=?</b>	Test command reports the supported values for the parameters <n> and <tout>
<b>#SRS - Select Ringer Sound</b>	<b>SELINT 2</b>
<b>AT#SRS=</b> <b>[&lt;n&gt;,&lt;tout&gt;]</b>	<p>Set command sets the ringer sound.</p> <p>Parameters:</p> <p>&lt;n&gt; - ringing tone 0 - current ringing tone 1..max - ringing tone number, where <i>max</i> can be read by issuing the Test command <b>AT#SRS=?</b>.</p> <p>&lt;tout&gt; - ringing tone playing timer in units of seconds. 0 - ringer is stopped (if present) and current ringer sound is set. 1..60 - ringer sound playing for &lt;tout&gt; seconds and, if &lt;n&gt; &gt; 0, ringer sound &lt;n&gt; is set as default ringer sound.</p> <p>Note: when the command is issued with &lt;n&gt; &gt; 0 and &lt;tout&gt; &gt; 0, the &lt;n&gt; ringing tone is played for &lt;tout&gt; seconds and stored as default ringing tone.</p> <p>Note: if command is issued with &lt;n&gt; &gt; 0 and &lt;tout&gt; = 0, the playing of the ringing is stopped (if present) and &lt;n&gt; ringing tone is set as current.</p> <p>Note: if command is issued with &lt;n&gt; = 0 and &lt;tout&gt; &gt; 0 then the current ringing tone is played for &lt;tout&gt; seconds.</p> <p>Note: if both &lt;n&gt; and &lt;tout&gt; are 0 then the default ringing tone is set as current and ringing is stopped.</p> <p>Note: If all parameters are omitted then the behaviour of Set command is the same as Read command</p>
<b>AT#SRS?</b>	<p>Read command reports current selected ringing and its status in the form:</p> <p><b>#SRS: &lt;n&gt;,&lt;status&gt;</b></p> <p>where:</p> <p>&lt;n&gt; - ringing tone number 1..max</p> <p>&lt;status&gt; - ringing status 0 - selected but not playing 1 - currently playing</p>

<b>#SRS - Select Ringer Sound</b>	<b>SELINT 2</b>
AT#SRS=?	Test command reports the supported values for the parameters <n> and <tout>

### 3.5.7.19.1.4. Select Ringer Path - #SRP

<b>#SRP - Select Ringer Path</b>	<b>SELINT 0 / 1</b>
AT#SRP[=<n>]	<p>Set command selects the ringer path towards whom sending ringer sounds and all signalling tones.</p> <p>Parameter:</p> <ul style="list-style-type: none"> <li>&lt;n&gt; - ringer path number</li> <li>0 - sound output towards current selected audio path (see command <b>#CAP</b>)</li> <li>1 - sound output towards handsfree</li> <li>2 - sound output towards handset</li> <li>3 - sound output towards Buzzer Output pin GPIO7</li> </ul> <p>Note: In order to use the Buzzer Output an external circuitry must be added to drive it properly from the GPIO7 pin, furthermore the GPIO7 pin direction must be set to Buzzer output (Alternate function); see command <b>#GPIO</b>.</p> <p>Note: issuing <b>AT#SRP&lt;CR&gt;</b> is the same as issuing the Read command.</p> <p>Note: issuing <b>AT#SRP=&lt;CR&gt;</b> is the same as issuing the command <b>AT#SRP=0&lt;CR&gt;</b>.</p>
AT#SRP?	Read command reports the selected ringer path in the format:  <b>#SRP: &lt;n&gt;.</b>
AT#SRP=?	Test command reports the supported values for the parameter <n>.
Example	AT#SRP=? #SRP: (0-3) OK AT#SRP=3 OK

<b>#SRP - Select Ringer Path</b>	<b>SELINT 2</b>
AT#SRP=<n>]	<p>Set command selects the ringer path towards whom sending ringer sounds and all signalling tones.</p> <p>Parameter:</p> <ul style="list-style-type: none"> <li>&lt;n&gt; - ringer path number</li> <li>0 - sound output towards current selected audio path (see command <b>#CAP</b>)</li> <li>1 - sound output towards handsfree</li> <li>2 - sound output towards handset (not available for GL865-DUAL, GL868-DUAL, GE910-QUAD and GE910-GNSS)</li> <li>3 - sound output towards Buzzer Output pin GPIO7</li> </ul>

#SRP - Select Ringer Path	SELINT 2
	Note: In order to use the Buzzer Output an external circuitry must be added to drive it properly from the GPIO7 pin, furthermore the GPIO7 pin direction must be set to Buzzer output (Alternate function); see command #GPIO.
AT#SRP?	Read command reports the selected ringer path in the format:  #SRP: <n>.
AT#SRP=?	Test command reports the supported values for the parameter <n>.
Example	AT#SRP=? #SRP: (0-3)  OK AT#SRP=3 OK

### 3.5.7.19.1.5. Handsfree Microphone Gain - #HFMICG

#HFMICG - Handsfree Microphone Gain	SELINT 0 / 1
AT#HFMICG[=<level>]]	Set command sets the handsfree microphone input gain  Parameter: <level>: handsfree microphone input gain 0..7 - handsfree microphone gain (+6dB/step, factory default = 4)  Note: issuing AT#HFMICG<CR> is the same as issuing the Read command.  Note: issuing AT#HFMICG=<CR> returns the OK result code.
AT#HFMICG?	Read command returns the current handsfree microphone input gain, in the format:  #HFMICG: <level>
AT#HFMICG=?	Test command returns the supported range of values of parameter <level>.

#HFMICG - Handsfree Microphone Gain	SELINT 2
AT#HFMICG=<level>]	Set command sets the handsfree microphone input gain  Parameter: <level>: handsfree microphone input gain 0..7 - handsfree microphone gain (+6dB/step, factory default = 4)
AT#HFMICG?	Read command returns the current handsfree microphone input gain, in the format:  #HFMICG: <level>
AT#HFMICG=?	Test command returns the supported range of values of parameter <level>.

### 3.5.7.19.1.6. Handset Microphone Gain - #HSMICG

#HSMICG - Handset Microphone Gain		SELINT 0 / 1
AT#HSMICG=[<level>]	<p>Set command sets the handset microphone input gain</p> <p>Parameter:</p> <p>&lt;level&gt;: handset microphone input gain 0..7 - handset microphone gain (+6dB/step, factory default = 0)</p>	
	<p>Note: issuing AT#HSMICG&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT#HSMICG=&lt;CR&gt; returns the <b>OK</b> result code.</p>	
AT#HSMICG?	Read command returns the current handset microphone input gain, in the format:  <b>#HSMICG: &lt;level&gt;</b>	
AT#HSMICG=?	Test command returns the supported range of values of parameter <level>.	

#HSMICG - Handset Microphone Gain		SELINT 2
AT#HSMICG=[<level>]	<p>Set command sets the handset microphone input gain</p> <p>Parameter:</p> <p>&lt;level&gt;: handset microphone input gain 0..7 - handset microphone gain (+6dB/step, factory default = 0)</p>	
AT#HSMICG?	Read command returns the current handset microphone input gain, in the format:  <b>#HSMICG: &lt;level&gt;</b>	
AT#HSMICG=?	Test command returns the supported range of values of parameter <level>.	

### 3.5.7.19.1.7. Handsfree Receiver Gain - #HFRECG

#HFRECG - Handsfree Receiver Gain		SELINT 2
AT#HFRECG=<level>	<p>Set command sets the handsfree analogue output gain</p> <p>Parameter:</p> <p>&lt;level&gt;: handsfree analogue output gain 0..6 - handsfree analogue output (-3dB/step, factory default = 0)</p>	
	<p><i>Note: This parameter is saved in NVM issuing AT&amp;W command.</i></p>	
AT#HFRECG?	Read command returns the current handsfree analog output gain, in the format:  <b>#HFRECG: &lt;level&gt;</b>	

<b>AT#HFRECG =?</b>	Test command returns the supported range of values of parameter <level>.
---------------------	--

### 3.5.7.19.1.8. Handset Receiver Gain - #HSRECG

<b>#HSRECG - Handset Receiver Gain</b>		<b>SELINT 2</b>
<b>AT#HSRECG= &lt;level&gt;</b>	<p>Set command sets the handset analogue output gain</p> <p>Parameter:  <b>&lt;level&gt;</b>: handset analogue output gain            0..6 - handset analogue output (-3dB/step, default value = 0)</p>	
	<p><i>Note: This parameter is saved in NVM issuing AT&amp;W command.</i></p>	
<b>AT#HSRECG?</b>	<p>Read command returns the current handset analog output gain, in the format:</p> <p><b>#HSRECG: &lt;level&gt;</b></p>	
<b>AT#HSRECG =?</b>	Test command returns the supported range of values of parameter <level>.	

### 3.5.7.19.1.9. Set Headset Sidetone - #SHFSD

<b>#SHFSD - Set Headset Sidetone</b>		<b>SELINT 0 / 1</b>
<b>AT#SHFSD[= [&lt;mode&gt;]]</b>	<p>Set command enables/disables the sidetone on headset audio output.</p> <p>Parameter:  <b>&lt;mode&gt;</b>            0 - disables the headset sidetone (factory default)            1 - enables the headset sidetone.</p>	
	<p><i>Note: This setting returns to default after power off.</i></p> <p><i>Note: issuing AT#SHFSD&lt;CR&gt; is the same as issuing the Read command.</i></p> <p><i>Note: issuing AT#SHFSD=&lt;CR&gt; is the same as issuing the command AT#SHFSD=0&lt;CR&gt;.</i></p>	
<b>AT#SHFSD?</b>	<p>Read command reports whether the headset sidetone is currently enabled or not, in the format:</p> <p><b>#SHFSD: &lt;mode&gt;</b></p>	
<b>AT#SHFSD=?</b>	Test command returns the supported range of values of parameter <mode>.	

<b>#SHFSD - Set Headset Sidetone</b>		<b>SELINT 2</b>
<b>AT#SHFSD= [&lt;mode&gt;]</b>	<p>Set command enables/disables the sidetone on headset audio output.</p> <p>Parameter:  <b>&lt;mode&gt;</b>            0 - disables the headset sidetone (factory default)</p>	

#SHFSD - Set Headset Sidetone		SELINT 2
	1 - enables the headset sidetone.  Note: This setting returns to default after power off.	
AT#SHFSD?	Read command reports whether the headset sidetone is currently enabled or not, in the format:  <b>#SHFSD: &lt;mode&gt;</b>	
AT#SHFSD=?	Test command returns the supported range of values of parameter <mode>.	

### 3.5.7.19.1.10. Set Handset Sidetone - #SHSSD

#SHSSD - Set Handset Sidetone		SELINT 2
AT#SHSSD=<mode>	Set command enables/disables the sidetone on handset audio output.  Parameter: <b>&lt;mode&gt;</b> 0 - disables the handset sidetone 1 - enables the handset sidetone (factory default)  <i>Note: This parameter is saved in NVM issuing AT&amp;W command.</i>	
AT#SHSSD?	Read command reports whether the handset sidetone is currently enabled or not, in the format:  <b>#SHSSD: &lt;mode&gt;</b>	
AT#SHSSD=?	Test command returns the supported range of values of parameter <mode>.	

### 3.5.7.19.1.11. Speaker Mute Control - #SPKMUT

#SPKMUT - Speaker Mute Control		SELINT 2
AT#SPKMUT=<n>	Set command enables/disables the global muting of the speaker audio line, for every audio output ( ring, incoming sms, voice, Network coverage)  Parameter: <b>&lt;n&gt;</b> 0 - mute off, speaker active (factory default) 1 - mute on, speaker muted.  <i>Note: this command mutes/activates both speaker audio paths, internal speaker and external speaker.</i>	
AT#SPKMUT?	Read command reports whether the muting of the speaker audio line during a voice call is enabled or not, in the format:  <b>#SPKMUT: &lt;n&gt;</b>	
AT#SPKMUT=?	Test command reports the supported values for <n> parameter.	

### 3.5.7.19.1.12. Open Audio Loop - #OAP

#OAP - Open Audio Loop		SELINT 2
<b>AT#OAP=[&lt;mode&gt;]</b>	<p>Set command sets Open Audio Path.</p> <p>Parameter:</p> <ul style="list-style-type: none"> <li>0 - disables Open Audio Path (default)</li> <li>1 - enables Open Audio Path</li> </ul> <p>Note: the audio Loop will be activated on line select by the AXE pin or #CAP command.</p>	
<b>AT#OAP?</b>	Read command reports whether the Open Audio Path is currently enabled or not, in the format:	
	<b>#OAP: &lt;mode&gt;</b>	
<b>AT#OAP=?</b>	Test command returns the supported range of values of parameter <mode>.	
<b>Note</b>	The audio loop will be established between microphone and speaker using sidetone scaling value.	

### 3.5.7.19.1.13. Setting two frequency modes for buzzer - #BUZZERMODE

#BUZZERMODE – Sets two frequency modes for buzzer		SELINT 2
<b>AT#BUZZERMODE =&lt;mode&gt;</b>	<p>Set two Buzzer Frequency Modes, slow and fast.</p> <p>Parameters:</p> <p>&lt;mode&gt;</p> <ul style="list-style-type: none"> <li>0 – fast frequency (factory default)</li> <li>1 – frequency halved</li> </ul>	
<b>AT#BUZZERMODE ?</b>	Read command reports last setting, in the format:  <b>#BUZZEMODE:&lt;mode&gt;</b>	
<b>AT#BUZZERMODE =?&lt;mode&gt;</b>	Test command reports the range of supported values for parameter:	

### 3.5.7.19.2. Tones configuration

#### 3.5.7.19.2.1. Signaling Tones Mode - #STM

#STM - Signaling Tones Mode		SELINT 0 / 1
AT#STM [=<mode>]	<p>Set command enables/disables the signaling tones output on the audio path selected with #SRP command</p> <p>Parameter:  <b>&lt;mode&gt;</b> - signaling tones status            0 - signaling tones disabled            1 - signaling tones enabled</p> <p>Note: AT#STM=0 has the same effect as AT+CALM=2; AT#STM=1 has the same effect as AT+CALM=0.</p> <p>Note: If parameter is omitted then the behaviour of Set command is the same as Read command</p>	
AT#STM?	Read command reports whether the current signaling tones status is enabled or not, in the format:	#STM: <mode>
AT#STM=?	Test command reports supported range of values for parameter <mode>.	

#STM - Signaling Tones Mode		SELINT 2
AT#STM= [<mode>]	<p>Set command enables/disables the signaling tones output on the audio path selected with #SRP command</p> <p>Parameter:  <b>&lt;mode&gt;</b> - signaling tones status            0 - signaling tones disabled            1 - signaling tones enabled            2 - all tones disabled</p> <p>Note:            AT#STM=0 has the same effect as AT+CALM=2;            AT#STM=1 has the same effect as AT+CALM=0.</p>	
AT#STM?	Read command reports whether the current signaling tones status is enabled or not, in the format:	#STM: <mode>
AT#STM=?	Test command reports supported range of values for parameter <mode>.	

### 3.5.7.19.2.2. Tone Playback - #TONE

#TONE - Tone Playback	SELINT 2
AT#TONE=<tone> [,<duration>]	<p>Execution command allows the reproduction of DTMF tones, standard free tone, standard busy tone and a set of user defined tones for a certain time.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;tone&gt; - ASCII characters, range is ((0-9),#,*,(A-D),(G-L),Y,Z);</li> <li>- (0-9), #, *,(A-D): DTMF tone</li> <li>- (G-L): User Defined Tones</li> <li>- Y: free tone</li> <li>- Z: busy tone</li> </ul> <p>&lt;duration&gt; - Duration of current tone in 1/10 of Sec. 1..300 - tenth of seconds (default is 30)</p>
AT#TONE=?	Test command returns the supported range of values for parameters <tone> and <duration>.
Note:	See AT#UDTSET command to set user defined tones

### 3.5.7.19.2.3. Extended tone generation - #TONEEXT

#TONEEXT – Extended tone generation	SELINT 2
AT#TONEEXT=<tonId>,<act>	<p>Execution command allows the reproduction of DTMF tones, standard free tone, standard busy tone and a set of user defined tones for a infinite time, or stop the running tone</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;tonId&gt; - ASCII characters in the set (0-9),#,*,(A-D),(G-L),Y,Z ;</li> <li>- (0-9), #, *,(A-D) : DTMF tone</li> <li>- (G-L) : User Defined Tones<sup>28</sup>.</li> <li>- y : free tone</li> <li>- z: busy tone</li> </ul> <p>&lt;act&gt; - Action to be performed.</p> <ul style="list-style-type: none"> <li>- 0: Stop the &lt;tonId&gt; if running.</li> <li>- 1: Start the &lt;tonId&gt;.</li> </ul>
AT#TONEEXT=?	Test command returns the range of supported values for parameter <tonId>,<act>.

<sup>28</sup> See also AT#UDTSET, AT#UDTRST and AT#UDTSBV command description following in this document.

### 3.5.7.19.2.4. Tone Classes Volume - #TSVOL

#TSVOL – Tone Classes Volume	SELINT 2
<b>AT#TSVOL=</b> <b>&lt;class&gt;,</b> <b>&lt;mode&gt;</b> <b>[,&lt;volume&gt;]</b>	<p>Set command is used to select the volume mode for one or more tone classes.</p> <p>Parameters:</p> <p><b>&lt;class&gt;</b> - sum of integers each representing a class of tones which the command refers to</p> <ul style="list-style-type: none"> <li>1 - GSM tones</li> <li>2 - ringer tones</li> <li>4 - alarm tones</li> <li>8 - signalling tones</li> <li>16 - DTMF tones</li> <li>32 - SIM Toolkit tones</li> <li>64 - user defined tones</li> <li>128 – Dial tones</li> <li>255 - all classes</li> </ul> <p><b>&lt;mode&gt;</b> - it indicates which volume is used for the classes of tones represented by <b>&lt;class&gt;</b></p> <ul style="list-style-type: none"> <li>0 - default volume is used</li> <li>1 - the volume <b>&lt;volume&gt;</b> is used</li> </ul> <p><b>&lt;volume&gt;</b> - volume to be applied to the set of classes of tones represented by <b>&lt;class&gt;</b>; it is mandatory if <b>&lt;mode&gt;</b> is 1.</p> <p>0..max - the value of <i>max</i> can be read issuing the Test command <b>AT#TSVOL=?</b></p> <p>Note: The class DTMF Tones (<b>&lt;class&gt;</b>=16) refers only to the volume for locally generated DTMF tones. It doesn't affect the level of the DTMF generated by the network as result of AT+VTS command</p>
<b>AT#TSVOL?</b>	Read command returns for each class of tones the last setting of <b>&lt;mode&gt;</b> and, if <b>&lt;mode&gt;</b> is not 0, of <b>&lt;volume&gt;</b> too, in the format:  <b>#TSVOL: 1,&lt;mode1&gt;[,&lt;volume1&gt;]&lt;CR&gt;&lt;LF&gt;</b> <b>...</b> <b>#TSVOL:128,&lt;mode128&gt;[,&lt;volume128&gt;]</b>
<b>AT#TSVOL=?</b>	Test command returns the supported range of values of parameters <b>&lt;class&gt;</b> , <b>&lt;mode&gt;</b> and <b>&lt;volume&gt;</b> .
Example	<pre>AT#TSVOL=64,1,5 OK AT#TSVOL? #TSVOL:1,0 #TSVOL:2,0 #TSVOL:4,1,5 #TSVOL:8,0 #TSVOL:16,1,5</pre>

#TSVOL – Tone Classes Volume		SELINT 2
	<pre>#TSVOL:32,0 #TSVOL:64,1,5 #TSVOL:128,0  OK</pre>	
Note:	<p>GSM Tones:</p> <ul style="list-style-type: none"> <li>BusyToneId</li> <li>CongestionToneId</li> <li>RadioPathToneId</li> <li>CallWaitingToneId</li> </ul> <p>Ringer Tone:</p> <ul style="list-style-type: none"> <li>RingingToneMOId</li> <li>RingingToneMTId</li> <li>AutoRedialConnToneId</li> </ul> <p>Alarm Tones:</p> <ul style="list-style-type: none"> <li>AlarmToneId</li> <li>BatteryLowToneId</li> <li>SMSToneId</li> <li>MMSToneId</li> <li>PowerOnToneId</li> <li>PowerOffToneId</li> <li>NoUnitsLeftToneId</li> </ul> <p>Signaling Tones:</p> <ul style="list-style-type: none"> <li>classzeroToneId</li> <li>NetworkIndToneId</li> <li>NoServiceToneId</li> <li>SignallingErrToneId</li> <li>AutoRedialToneId</li> <li>ErrorToneId</li> <li>CallDroppedToneId</li> </ul> <p>DTMF Tones</p> <ul style="list-style-type: none"> <li>Local ADTMF</li> </ul> <p>SIM Toolkit Tones</p> <ul style="list-style-type: none"> <li>SIMTDialToneId</li> <li>SIMTBusyToneId</li> <li>SIMTCongestionToneId</li> <li>SIMTRadioPathToneId</li> <li>SIMTCallDroppedToneId</li> <li>SIMTErrorToneId</li> <li>SIMTCallWaitingToneId</li> <li>SIMTRingingToneMTId</li> </ul> <p>User Defined Tones:</p> <p>Tone defined with AT#UDTSET</p> <p>Dial tones:</p> <ul style="list-style-type: none"> <li>DialToneId</li> </ul>	

### 3.5.7.19.2.5. User Defined Tone SET - #UDTSET command

#UDTSET – User Defined Tone SET	SELINT 2
AT#UDTSET=  <b>&lt;tone&gt;</b> <b>,&lt;F1&gt;,&lt;A1&gt;</b> <b>[,&lt;F2&gt;,&lt;A2&gt;</b> <b>[,&lt;F3&gt;,&lt;A3&gt;]]</b>	<p>Set command sets frequency and amplitude composition for a User Defined Tone.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;toner&gt; - tone index (G,H,I,J,K,L)</li> <li>&lt;Fi&gt; - frequency in Hz; range is (300,3000) in step of 1 Hz</li> <li>&lt;Ai&gt; - amplitude in dB; range is (10,100) in step of 1 dB</li> </ul> <p>Note: Ai = 100 is equal to the max value of the single tone. Lower values attenuate output to the difference between 100 and the selected amplitude (ex: Ai = 80 is equal to 100-80 = -20dB).</p> <p>Note: issuing AT&amp;F1 or AT&amp;Z has the effect to set the parameters with the last saved in NVM values</p> <p>Note: Ai = 0 and Fi = 0 are only values for uninitialized parameters and can't be issued by AT command. Every time the set command is issued, the unspecified parameters are automatically reset to zero. (Ai,Fi) issuing needs also (Aj,Fj) with j<i>&lt;i&gt;</i>.</p>
AT# UDTSET?	Read command returns the current settings for the tones:  <b>#UDTSET: G,&lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b> <b>#UDTSET: H, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b> <b>#UDTSET: I, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b> <b>#UDTSET: J, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b> <b>#UDTSET: K, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b> <b>#UDTSET: L, &lt;F1&gt;,&lt;A1&gt;,&lt;F2&gt;,&lt;A2&gt;,&lt;F3&gt;,&lt;A3&gt;</b>
AT# UDTSET =?	Test command returns the supported range of values for <toner>, <Fi> and <Ai> parameters.

### 3.5.7.19.2.6. User Defined Tone SAVE - #UDTSAV command

#UDTSAV – User Defined Tone SAVE	SELINT 2
----------------------------------	----------

#UDTSAV – User Defined Tone SAVe		SELINT 2
AT#UDTSAV	Execution command saves the actual values of frequency and amplitude parameters that have been set with the command #UDTSET	
AT#UDTSAV =?	Test command returns the OK result code.	
Example	AT#UDTSAV OK  Current tones are saved in NVM	

### 3.5.7.19.2.7. User Defined Tone Reset - #UDTRST command

#UDTRST – User Defined Tone ReSeT		SELINT 2
AT#UDTRST	Execution command resets to the default set the actual values of frequency and amplitude parameters that can be set with the command #UDTSET.	
AT#UDTRST =?	Test command returns the OK result code.	
Example	AT#UDRST OK  The default value tones are restored in NVM	

### 3.5.7.19.3. Audio profiles

#### 3.5.7.19.3.1. Audio Profile Selection - #PSEL

#PSEL - Audio Profile Selection		SELINT 2
AT#PSEL=<prof>	Set command selects the active audio profile  Parameter: <prof>: current profile 0 - standard profile 1..3 - extended profile, modifiable.  <i>Note: This parameter is saved in NVM issuing AT&amp;W command.</i>	
AT#PSEL?	The read command returns the active profile in the format:  <b>#PSEL:&lt;prof&gt;</b>	
AT#PSEL=?	Test command returns the supported range of values of parameter <prof>.	

### 3.5.7.19.3.2. Audio Profile Configuration Save - #PSAV

#PSAV - Audio Profile Configuration Save		SELINT 2
<b>AT#PSAV</b>	<p>Execution command saves the actual audio parameters in the NVM of the device. It is not allowed if active audio profile is 0.</p> <p>The audio parameters to store are:</p> <ul style="list-style-type: none"> <li>- microphone line gain</li> <li>- earpiece line gain</li> <li>- side tone gain</li> <li>- LMS adaptation speed</li> <li>- LMS filter length (number of coefficients)</li> <li>- speaker to micro signal power relation</li> <li>- noise reduction max attenuation</li> <li>- noise reduction weighting factor (band 300-500Hz)</li> <li>- noise reduction weighting factor (band 500-4000Hz)</li> <li>- AGC Additional attenuation</li> <li>- AGC minimal attenuation</li> <li>- AGC maximal attenuation</li> <li>- Uplink path biquad filters</li> <li>- Downlink path biquad filters</li> </ul>	
<b>AT#PSAV=?</b>	Test command returns the <b>OK</b> result code.	
Example	<pre>AT#PSAV OK Current audio profile is saved in NVM</pre>	

### 3.5.7.19.3.3. Audio Profile Factory Configuration - #PRST

#PRST - Audio Profile Factory Configuration		SELINT 2
<b>AT#PRST</b>	<p>Execution command resets the actual audio parameters in the NVM of the device to the default set. It is not allowed if active audio profile is 0.</p> <p>The audio parameters to reset are:</p> <ul style="list-style-type: none"> <li>- microphone line gain</li> <li>- earpiece line gain</li> <li>- side tone gain</li> <li>- LMS adaptation speed (step size)</li> <li>- LMS filter length (number of coefficients)</li> <li>- speaker to micro signal power relation</li> <li>- noise reduction max attenuation</li> <li>- noise reduction weighting factor (band 300-500Hz)</li> <li>- noise reduction weighting factor (band 500-4000Hz)</li> <li>- AGC Additional attenuation</li> <li>- AGC minimal attenuation</li> <li>- AGC maximal attenuation</li> </ul>	

#PRST - Audio Profile Factory Configuration		SELINT 2
AT#PRST=?	Test command returns the <b>OK</b> result code.	
Example	AT#PRST OK <i>Current audio profile is reset</i>	

### 3.5.7.19.4. Audio filters

#### 3.5.7.19.4.1. Cascaded filters - #BIQUADIN

#BIQUADIN - Uplink Path Biquad Filters		SELINT 2
AT# BIQUADIN=	<p>Set command allows to configure the parameters of the two cascaded digital <b>biquad filters</b> <math>H_{First}(z) \cdot H_{Second}(z)</math> in Uplink path (sending). It is not allowed if active audio profile is 0.</p> <p>Parameters:</p> <p><math>&lt; a_{F0}, &lt; a_{F1}, &lt; a_{F2}, &lt; b_{F1}, &lt; b_{F2}, &lt; a_{S0}, &lt; a_{S1}, &lt; a_{S2}, &lt; b_{S1}, &lt; b_{S2} &gt;&gt;</math> - they all are specific parameters for the calculation of digital <b>biquad filters</b> as follows:</p> $H_F(z) = \frac{a_{F0} + 2 \cdot a_{F1} \cdot z^{-1} + a_{F2} \cdot z^{-2}}{1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}}$ $H_S(z) = \frac{a_{S0} + 2 \cdot a_{S1} \cdot z^{-1} + a_{S2} \cdot z^{-2}}{1 + 2 \cdot b_{S1} \cdot z^{-1} + b_{S2} \cdot z^{-2}}$ <p>-32768..32767 - each value has to be interpreted as signed fixed point number in two's complement format with 15 fractional bits in a 16 bit word (Q15)</p> <p>Note: in the above formulas pay attention to the multiplier (2) for parameters <math>&lt; a_{F1}, &lt; a_{S1}, &lt; b_{F1} &gt;</math> and <math>&lt; b_{S1} &gt;</math></p> <p>Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed.</p>	
AT# BIQUADIN?	Read command returns the parameters for the active profile in the format: <b>#BIQUADIN:</b> $< a_{F0}, < a_{F1}, < a_{F2}, < b_{F1}, < b_{F2}, < a_{S0}, < a_{S1}, < a_{S2}, < b_{S1}, < b_{S2} >>$ It is not allowed if active audio profile is 0.	
AT# BIQUADIN=?	Test command returns the supported range of values for parameters $< a_{F0}, < a_{F1}, < a_{F2}, < b_{F1}, < b_{F2}, < a_{S0}, < a_{S1}, < a_{S2}, < b_{S1}, < b_{S2} >>$	

### 3.5.7.19.4.2. Cascaded filters - #BIQUADOUT

#BIQUADOUT - Downlink Path Biquad Filters	SELINT 2
<b>AT# BIQUADOUT=</b> <af0> [,<af1> [,<af2> [,<bf1> [,<bf2> [,<as0> [,<as1> [,<as2> [,<bs1> [,<bs2> ]]]]]]]	<p>Set command allows to configure the parameters of the two cascaded digital <b>biquad filters</b> <math>H_{First}(z) \cdot H_{Second}(z)</math> in Downlink path (receiving). It is not allowed if active audio profile is 0.</p> <p>Parameters:  &lt;afn&gt;, &lt;bfn&gt;, &lt;asn&gt;, &lt;bsn&gt; - they all are specific parameters for the calculation of digital <b>biquad filters</b> as follows:</p> $H_F(z) = \frac{a_{F0} + 2 \cdot a_{F1} \cdot z^{-1} + a_{F2} \cdot z^{-2}}{1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}}$ $H_S(z) = \frac{a_{S0} + 2 \cdot a_{S1} \cdot z^{-1} + a_{S2} \cdot z^{-2}}{1 + 2 \cdot b_{S1} \cdot z^{-1} + b_{S2} \cdot z^{-2}}$ <p>-32768..32767 - each value has to be interpreted as signed fixed point number in two's complement format with 15 fractional bits in a 16 bit word (Q15)</p> <p>Note: in the above formulas pay attention to the multiplier (2) for parameters &lt;af1&gt;, &lt;as1&gt;, &lt;bf1&gt; and &lt;bs1&gt;</p> <p>Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed.</p>
<b>AT# BIQUADOUT?</b>	<p>Read command returns the parameters for the active profile in the format:</p> <p><b># BIQUADOUT: &lt;af0&gt;,&lt;af1&gt;,&lt;af2&gt;,&lt;bf1&gt;,&lt;bf2&gt;,&lt;as0&gt;,&lt;as1&gt;,&lt;as2&gt;,&lt;bs1&gt;,&lt;bs2&gt;</b>  It is not allowed if active audio profile is 0.</p>
<b>AT# BIQUADOUT=?</b>	<p>Test command returns the supported range of values for parameters &lt;af0&gt;, &lt;af1&gt;, &lt;af2&gt;, &lt;bf1&gt;, &lt;bf2&gt;, &lt;as0&gt;, &lt;as1&gt;, &lt;as2&gt;, &lt;bs1&gt;, &lt;bs2&gt;</p>

### 3.5.7.19.4.3. Extended Uplink Biquad Filters - #BIQUADINEX

#BIQUADINEX – Extended Uplink Biquad Filters	SELINT 2
<b>AT#BIQUADINEX=</b> <af0> [,<af1> [,<af2> [,<bf1> [,<bf2> [,<as0>	<p>Set command allows to configure the parameters of the two extended digital <b>biquad filters</b> <math>H_{First}(z) \cdot H_{Second}(z)</math> in Uplink path (sending). It is not allowed if active audio profile is 0.</p> <p>Parameters:  &lt;afn&gt;, &lt;bfn&gt;, &lt;asn&gt;, &lt;bsn&gt; - they all are specific parameters for the calculation of digital <b>biquad filters</b> as follows:</p>

<code>[,&lt;a<sub>S1</sub>&gt; [,&lt;a<sub>S2</sub>&gt; [,&lt;b<sub>S1</sub>&gt; [,&lt;b<sub>S2</sub>&gt; ]]]]]]])</code>	$H_F(z) = \frac{a_{F0} + 2 \cdot a_{F1} \cdot z^{-1} + a_{F2} \cdot z^{-2}}{1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}}$ $H_S(z) = \frac{a_{S0} + 2 \cdot a_{S1} \cdot z^{-1} + a_{S2} \cdot z^{-2}}{1 + 2 \cdot b_{S1} \cdot z^{-1} + b_{S2} \cdot z^{-2}}$ <p>-32768..32767 - each value has to be interpreted as signed fixed point number in two's complement format with 15 fractional bits in a 16 bit word (Q15)</p> <p>Note: in the above formulas pay attention to the multiplier (2) for parameters <code>&lt;a<sub>F1</sub>&gt;</code>, <code>&lt;a<sub>S1</sub>&gt;</code>, <code>&lt;b<sub>F1</sub>&gt;</code> and <code>&lt;b<sub>S1</sub>&gt;</code>          Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed.</p>
<b>AT#BIQUADINEX?</b>	Read command returns the parameters for the active profile in the format: <b>#BIQUADINEX:</b> <code>&lt;a<sub>F0</sub>&gt;,&lt;a<sub>F1</sub>&gt;,&lt;a<sub>F2</sub>&gt;,&lt;b<sub>F1</sub>&gt;,&lt;b<sub>F2</sub>&gt;,&lt;a<sub>S0</sub>&gt;,&lt;a<sub>S1</sub>&gt;,&lt;a<sub>S2</sub>&gt;,&lt;b<sub>S1</sub>&gt;,&lt;b<sub>S2</sub>&gt;</code> Note: It is not allowed if active audio profile is 0; in this case an ERROR is returned.
<b>AT#BIQUADINEX=?</b>	Test command returns the supported range of values for parameters <code>&lt;a<sub>F0</sub>&gt;</code> , <code>&lt;a<sub>F1</sub>&gt;</code> , <code>&lt;a<sub>F2</sub>&gt;</code> , <code>&lt;b<sub>F1</sub>&gt;</code> , <code>&lt;b<sub>F2</sub>&gt;</code> , <code>&lt;a<sub>S0</sub>&gt;</code> , <code>&lt;a<sub>S1</sub>&gt;</code> , <code>&lt;a<sub>S2</sub>&gt;</code> , <code>&lt;b<sub>S1</sub>&gt;</code> , <code>&lt;b<sub>S2</sub>&gt;</code>

### 3.5.7.19.4.4. Extended Downlink Biquad Filters - #BIQUADOUTEX

#BIQUADOUTEX – Extended Downlink Biquad Filters <span style="float: right;">SELINT 2</span>	
<code>AT#BIQUADOUTEX=</code> <code>&lt;a<sub>F0</sub>&gt; [,&lt;a<sub>F1</sub>&gt; [,&lt;a<sub>F2</sub>&gt; [,&lt;b<sub>F1</sub>&gt; [,&lt;b<sub>F2</sub>&gt; [,&lt;a<sub>S0</sub>&gt; [,&lt;a<sub>S1</sub>&gt; [,&lt;a<sub>S2</sub>&gt; [,&lt;b<sub>S1</sub>&gt; [,&lt;b<sub>S2</sub>&gt; ]]]]]]])</code>	Set command allows to configure the parameters of the two extended digital <b>biquad filters</b> $H_{First}(z) \cdot H_{Second}(z)$ in Downlink path (receiving). It is not allowed if active audio profile is 0. Parameters: <code>&lt;a<sub>Fn</sub>&gt;,&lt;b<sub>Fn</sub>&gt;,&lt;a<sub>Sn</sub>&gt;,&lt;b<sub>Sn</sub>&gt;</code> - they all are specific parameters for the calculation of digital <b>biquad filters</b> as follows: $H_F(z) = \frac{a_{F0} + 2 \cdot a_{F1} \cdot z^{-1} + a_{F2} \cdot z^{-2}}{1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}}$

	$H_S(z) = \frac{a_{S0} + 2 \cdot a_{S1} \cdot z^{-1} + a_{S2} \cdot z^{-2}}{1 + 2 \cdot b_{S1} \cdot z^{-1} + b_{S2} \cdot z^{-2}}$ <p>-32768..32767 - each value has to be interpreted as signed fixed point number in two's complement format with 15 fractional bits in a 16 bit word (Q15)</p> <p>Note: in the above formulas pay attention to the multiplier (2) for parameters <math>\langle a_{F1} \rangle</math>, <math>\langle a_{S1} \rangle</math>, <math>\langle b_{F1} \rangle</math> and <math>\langle b_{S1} \rangle</math>  Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed.</p>
AT#BIQUADOUTEX?	<p>Read command returns the parameters for the active profile in the format:</p> <p><b>#BIQUADOUTEX:</b></p> <p><math>\langle a_{F0} \rangle, \langle a_{F1} \rangle, \langle a_{F2} \rangle, \langle b_{F1} \rangle, \langle b_{F2} \rangle, \langle a_{S0} \rangle, \langle a_{S1} \rangle, \langle a_{S2} \rangle, \langle b_{S1} \rangle, \langle b_{S2} \rangle</math></p> <p>Note: It is not allowed if active audio profile is 0; in this case an ERROR is returned.</p>
AT#BIQUADOUTEX=?	Test command returns the supported range of values for parameters $\langle a_{F0} \rangle$ , $\langle a_{F1} \rangle$ , $\langle a_{F2} \rangle$ , $\langle b_{F1} \rangle$ , $\langle b_{F2} \rangle$ , $\langle a_{S0} \rangle$ , $\langle a_{S1} \rangle$ , $\langle a_{S2} \rangle$ , $\langle b_{S1} \rangle$ , $\langle b_{S2} \rangle$

### **3.5.7.19.5. Echo canceller configuration**

### **3.5.7.19.5.1. Audio Profile Setting - #PSET**

<b>#PSET - Audio Profile Setting</b>		<b>SELINT 2</b>
	<p>&lt;min_atten&gt; - AGC minimal attenuation          &lt;max_atten&gt; - AGC maximal attenuation</p>	
<b>AT#PSET?</b>	<p>Read command returns the parameters for the active profile in the format:</p> <pre>#PSET:&lt;scal_in&gt;,&lt;scal_out&gt;,&lt;side_tone_atten&gt;,&lt;adaption_speed&gt;,&lt;filter_length&gt;,&lt;rxtxrelation&gt;,&lt;nr_atten&gt;,&lt;nr_w_0&gt;,&lt;nr_w_1&gt;,&lt;add_atten&gt;,&lt;min_atten&gt;,&lt;max_atten&gt;</pre> <p>It is not allowed if active audio profile is 0.</p>	
<b>AT#PSET=?</b>	Test command returns the supported range of values for the audio parameters.	

### 3.5.7.19.5.2. Handsfree Configuration - #HFCFG

<b>#HFCFG – Handsfree Configuration</b>		<b>SELINT 2</b>
<b>AT#HFCFG=</b>  <i>&lt;agc_rxtx_en&gt;, &lt;agc_rxtx&gt;,&lt;hf_gain&gt;</i>	<p>Set command configures AGC threshold for Double Talk detection and digital gain in Uplink.</p> <p>Parameters:</p> <p>&lt;agc_rxtx_en&gt;</p> <p>0 – disables different threshold for AGC          1 – enables different threshold for AGC</p> <p>&lt; agc_rxtx &gt;:          -960..960 - parameter that specifies the threshold for AGC</p> <p>&lt; hf_gain &gt;:          0 – disables +18dB of gain in Uplink path          1 – enables +18dB of gain in Uplink path</p> <p>Note: the digital gain in Uplink path should be enabled only reducing by the same amount the other analog/digital gains to avoid saturation.</p> <p>Note: It is not allowed if active audio profile is 0; in this case an ERROR is returned.</p>	
<b>AT#HFCFG?</b>	<p>Read command reports the currently selected parameters in the format:</p> <pre>#HFCFG: &lt;agc_rxtx_en&gt;,&lt;agc_rxtx&gt;,&lt;hf_gain&gt;</pre> <p>Note: if active audio profile is 0, then an ERROR is returned. If active audio profile is different from 0, then the default value for all the parameters is 0.</p>	

<b>AT#HFCFG =?</b>	Test command returns the supported range of values for all the parameters.
--------------------	--

### 3.5.7.19.5.3. TX Noise Injector configuration - #TXCNI

#TXCNI – TX Noise Injector configuration	SELINT 2
AT#TXCNI=<support>,<gain>,<floor>	<p>Set command enables and configures comfort noise injector embedded.</p> <p>Parameters:</p> <p>&lt;support&gt;</p> <ul style="list-style-type: none"> <li>0 - disable TXCNI functionality</li> <li>1 - enable TXCNI functionality</li> </ul> <p>&lt;gain&gt;</p> <p>0..32767 – gain value of noise injected</p> <p>&lt;floor&gt;</p> <p>0..32767 – floor value of noise injected</p> <p>Note: It is not allowed if active audio profile is 0; in this case an ERROR is returned.</p>
AT#TXCNI?	<p>Read command reports the currently selected parameters in the format:</p> <p>#TXCNI: &lt;support&gt;,&lt;gain&gt;,&lt;floor&gt;</p> <p>Note: if active audio profile is 0, then an ERROR is returned. If active audio profile is different from 0, then the default value for all the parameters is 0.</p>
AT#TXCNI=?	Test command returns the supported range of values for all the parameters.
<b>Notes:</b>	This command is available only for GE864-QUAD Automotive

### 3.5.7.19.5.4. Handsfree Echo Canceller - #SHFEC

#SHFEC - Handsfree Echo Canceller	SELINT 0 / 1
AT#SHFEC[= [<mode>]]	<p>Set command enables/disables the echo canceller function on audio handsfree output.</p> <p>Parameter:</p> <p>&lt;mode&gt;</p> <ul style="list-style-type: none"> <li>0 - disables echo canceller for handsfree mode (factory default)</li> <li>1 - enables echo canceller for handsfree mode</li> </ul>

#SHFEC - Handsfree Echo Canceller		SELINT 0 / 1
	<p>Note: This setting returns to default after power off.</p> <p>Note: issuing AT#SHFEC&lt;CR&gt; is the same as issuing the Read command.</p> <p>Note: issuing AT#SHFEC=&lt;CR&gt; is the same as issuing the command AT#SHFEC=0&lt;CR&gt;.</p>	
AT#SHFEC?	Read command reports whether the echo canceller function on audio handsfree output is currently enabled or not, in the format:	
	#SHFEC: <mode>	
AT#SHFEC=?	Test command returns the supported range of values of parameter <mode>.	

#SHFEC - Handsfree Echo Canceller		SELINT 2
AT#SHFEC= [<mode>]	<p>Set command enables/disables the echo canceller function on audio handsfree output.</p> <p>Parameter:  <b>&lt;mode&gt;</b></p> <p>0 - disables echo canceller for handsfree mode (factory default)      1 - enables echo canceller for handsfree mode</p> <p>Note: This setting returns to default after power off.</p>	
AT#SHFEC?	Read command reports whether the echo canceller function on audio handsfree output is currently enabled or not, in the format:	
	#SHFEC: <mode>	
AT#SHFEC=?	Test command returns the supported range of values of parameter <mode>.	

### 3.5.7.19.5.5. Handset Echo Canceller - #SHSEC

#SHSEC - Handset Echo Canceller		SELINT 2
AT#SHSEC = <mode>	<p>Set command enables/disables the echo canceller function on audio handset output.</p> <p>Parameter:  <b>&lt;mode&gt;</b></p> <p>0 - disables echo canceller for handset mode (default)      1 - enables echo canceller for handset mode</p> <p><i>Note: This parameter is saved in NVM issuing AT&amp;W command.</i></p>	
AT#SHSEC?	Read command reports whether the echo canceller function on audio handset output is currently enabled or not, in the format:	
	#SHSEC: <mode>	
AT#SHSEC =?	Test command returns the supported range of values of parameter <mode>.	

### 3.5.7.19.5.6. Echo Reducer Configuration - #ECHOCFG

#ECHOCFG – Echo Reducer Configuration	SELINT 2
<p><b>AT#ECHOCFG=&lt;par_1&gt;[,&lt;par_2&gt;[,...,&lt;par_N&gt;]]</b></p> <p>Set command writes values in echo reducer parameters. It is not allowed if active audio profile is 0.</p> <p>The module responds to the set command with the prompt '&gt;' and waits for the data to send.</p> <p>Parameters:</p> <p><b>&lt;par_1&gt;</b>            0 – configure all parameters, module awaits 39 values            1,2,...,39 – configure single parameters, module awaits 1 value</p> <p><b>&lt;par_i&gt;</b> with i = {2;N}            1,2,...,39 – configure every parameter specified</p> <p>After '&gt;' to complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex).</p> <p>Data shall be written in Hexadecimal Form with 4 digits for every <b>&lt;par_i&gt;</b> value provided by set command.</p> <p>If data are successfully sent, then the response is OK.            If data sending fails for some reason, an error code is reported.</p>	
<p><b>AT#ECHOCFG?</b></p> <p>Read command reports the currently set parameters in the format:</p> <p><b>#ECHOCFG: &lt;par_1&gt;&lt;par2&gt;...&lt;parN&gt;</b></p> <p><b>&lt;par_i&gt;:</b>            Full set of registers values dumped in hexadecimal form, 39 words (156 characters).</p> <p>It is not allowed if active audio profile is 0.</p>	
<p><b>AT#ECHOCFG=?</b></p> <p>Test command reports supported range of values for all parameters in the format:</p> <p><b>#ECHOCFG: &lt;i&gt;, (&lt;low_i&gt;-&lt;high_i&gt;)</b></p> <p>Where</p> <p><b>&lt;i&gt;:</b>            Parameter index</p> <p><b>&lt;low_i&gt;:</b>            Lower limit of <b>&lt;par_i&gt;</b></p>	

	<b>&lt;high_i&gt;:</b> High limit of <par_i>
--	---

### 3.5.7.19.5.7. Handsfree Automatic Gain Control - #SHFAGC

<b>#SHFAGC - Handsfree Automatic Gain Control</b>		<b>SELINT 2</b>
<b>AT# SHFAGC = &lt;mode&gt;</b>	Set command enables/disables the automatic gain control function on audio handsfree input.  Parameter: <b>&lt;mode&gt;</b> 0 - disables automatic gain control for handsfree mode (default) 1 - enables automatic gain control for handsfree mode	
<b>AT# SHFAGC?</b>	Read command reports whether the automatic gain control function on audio handsfree input is currently enabled or not, in the format:  <b>#SHFAGC: &lt;mode&gt;</b>	
<b>AT# SHFAGC =?</b>	Test command returns the supported range of values of parameter <b>&lt;mode&gt;.</b>	

### 3.5.7.19.5.8. Handset Automatic Gain Control - #SHSAGC

<b>#SHSAGC - Handset Automatic Gain Control</b>		<b>SELINT 2</b>
<b>AT#SHSAGC = &lt;mode&gt;</b>	Set command enables/disables the automatic gain control function on audio handset input.  Parameter: <b>&lt;mode&gt;</b> 0 - disables automatic gain control for handset mode (default) 1 - enables automatic gain control for handset mode	
<b>AT#SHSAGC?</b>	Read command reports whether the automatic gain control function on audio handset input is currently enabled or not, in the format:  <b>#SHSAGC: &lt;mode&gt;</b>	
<b>AT#SHSAGC =?</b>	Test command returns the supported range of values of parameter <b>&lt;mode&gt;.</b>	

### 3.5.7.19.5.9. Handsfree Noise Reduction - #SHFNR

#SHFNR - Handsfree Noise Reduction		SELINT 2
AT#SHFNR = <mode>	<p>Set command enables/disables the noise reduction function on audio handsfree input.</p> <p>Parameter: <b>&lt;mode&gt;</b></p> <p>0 - disables noise reduction for handsfree mode (default) 1 - enables noise reduction for handsfree mode</p> <p><i>Note: This parameter is saved in NVM issuing AT&amp;W command.</i></p>	
AT#SHFNR?	Read command reports whether the noise reduction function on audio handsfree input is currently enabled or not, in the format:	
	#SHFNR: <mode>	
AT#SHFNR =?	Test command returns the supported range of values of parameter <mode>.	

### 3.5.7.19.5.10. Handset Noise Reduction - #SHSNR

#SHSNR - Handset Noise Reduction		SELINT 2
AT# SHSNR = <mode>	<p>Set command enables/disables the noise reduction function on audio handset input.</p> <p>Parameter: <b>&lt;mode&gt;</b></p> <p>0 - disables noise reduction for handset mode (default) 1 - enables noise reduction for handset mode</p> <p><i>Note: This parameter is saved in NVM issuing AT&amp;W command.</i></p>	
AT# SHSNR?	Read command reports whether the noise reduction function on audio handset input is currently enabled or not, in the format:	
	# SHSNR: <mode>	
AT# SHSNR =?	Test command returns the supported range of values of parameter <mode>.	

### 3.5.7.19.6. Embedded DTMF decoder

#### 3.5.7.19.6.1. Embedded DTMF decoder enabling - #DTMF

#DTMF – Embedded DTMF decoder enabling		SELINT 2
AT#DTMF=<mode>	<p>Set command enables/disables the embedded DTMF decoder.</p> <p>Parameters: <b>&lt;mode&gt;:</b></p> <p>0 – disable DTMF decoder (default)</p>	

	<p>1 – enables DTMF decoder      2 – enables DTMF decoder without URC notify      3 – enables Enhanced DTMF decoder</p> <p><b>Note:</b> This functionality has to be enabled only with AT#CPUMODE=1 (valid for 10.00.xxx and 16.00.yyy SW releases).</p> <p>Note: if &lt;mode&gt;=1, the receiving of a DTMF tone is pointed out with an unsolicited message through AT interface in the following format:</p> <pre>#DTMFEV: x   with x as the DTMF digit</pre> <p>Note: the duration of a tone should be not less than 50ms.</p> <p>Note: the value set by command is not saved and a software or hardware reset restores the default value.      The value can be stored in NVM using profiles.</p> <p>Note: When DTMF decoder is enabled, PCM playing and recording are automatically disabled (AT#SPCM will return error).</p>
AT#DTMF?	Read command reports the currently selected <mode> in the format:  <b>#DTMF: &lt;mode&gt;</b>
AT#DTMF =?	Test command reports supported range of values for all parameters.

### 3.5.7.19.6.2. Embedded DTMF decoder configuration - #DTMFCFG

DTMFCFG – Embedded DTMF decoder configuration	SELINT 2
<b>AT#DTMFCFG=&lt;scaling&gt;,&lt;threshold_1&gt;,&lt;threshold_2&gt;</b>  Set command allows configuration of the embedded DTMF decoder.  Parameters: <b>&lt;scaling&gt;:</b> 3..11 – this is the scaling applied to the pcm samples in order to manage arithmetic operations. The default value is 7.  <b>&lt;threshold_1&gt;:</b> 1000..20000 – this is the numeric threshold used to detect DTMF tones. The default value is 2500.  <b>&lt;threshold_2&gt;:</b> 1000..20000 – this is the numeric threshold used to start DTMF decoding. The default value is 1500.	

	<p><b>Note: The default values were chosen after a fine tuning, so every change should be done very carefully to avoid wrong decoding.</b></p> <p>Note: the values set by command are not saved and a software or hardware reset restores the default value.</p> <p>Note: Default values are referred to standard DMTF decoder (AT#DTMF=1)</p>
<b>AT#DTMFCFG?</b>	Read command reports the currently selected <scaling>,<threshold> in the format:  <b># DTMFCFG: &lt;scaling&gt;,&lt;threshold_1&gt;,&lt;threshold_2&gt;</b>
<b>AT#DTMFCFG =?</b>	Test command reports supported range of values for all parameters.

### 3.5.7.19.7. Digital Voice Interface

#### 3.5.7.19.7.1. Digital Voiceband Interface - #DVI

<b>#DVI - Digital Voiceband Interface</b>		<b>SELINT 2</b>
<b>AT#DVI=&lt;mode&gt;[,&lt;dviport&gt;,&lt;clockmode&gt;]</b>	<p>Set command enables/disables the Digital Voiceband Interface.</p> <p>Parameters:</p> <p>&lt;<b>mode</b>&gt; - enables/disables the DVI.</p> <ul style="list-style-type: none"> <li>0 - disable DVI; audio is forwarded to the analog line; DVI pins can be used for other purposes, like GPIO, etc. (factory default)</li> <li>1 - enable DVI; audio is forwarded to the DVI block</li> <li>2 - enable DVI; audio is forwarded both to the DVI block and to the analog lines (Note: analog input disabled)</li> </ul> <p>&lt;<b>dviport</b>&gt;</p> <ul style="list-style-type: none"> <li>1 - DVI port 1 will be used (factory default)</li> <li>2 - DVI port 2 will be used. Not available for GC864-QUAD V2, GC864-DUAL V2, GE864-QUAD Automotive V2, GE864-QUAD ATEX, GE864-QUAD V2, GE864-DUAL V2, GE865-QUAD, GE910-QUAD and GE910-GNSS (see Test Command for availability of this port)</li> </ul> <p>&lt;<b>clockmode</b>&gt;</p> <ul style="list-style-type: none"> <li>0 - DVI slave</li> <li>1 - DVI master (factory default)</li> </ul> <p>Note: setting &lt;<b>clockmode</b>&gt;=0 has full effect only if &lt;<b>dviport</b>&gt;=1</p> <p>NOTE: DVI slave is available only on port 1</p> <p>NOTE: for further information see “Digital Voice Interface Application Note” (Rev. 2)</p>	
<b>AT#DVI?</b>	Read command reports last setting, in the format:	

#DVI - Digital Voiceband Interface		SELINT 2
	#DVI: <mode>,<dviport>,<clockmode>	
AT#DVI=?	Test command reports the range of supported values for parameters <mode>,<dviport> and <clockmode>	
Example	AT#DVI=2,1,1 OK  <i>Both analog and DVI activated for audio. DVI is configured as master providing on DVI Port #1</i>	

### 3.5.7.19.7.2.

### Digital voiceband interface extension - #DVIEEXT

#DVIEEXT - Digital Voiceband Interface Extension	SELINT 0,1,2
<b>AT#DVIEEXT=&lt;config&gt;,[&lt;samplerate&gt;,&lt;sampleclock&gt;,&lt;audio mode&gt;,&lt;edge&gt;]</b> Set command configures the Digital Voiceband Interface.  Parameters: <b>&lt;config&gt;</b> 0 – Burst Mode (factory default) 1 – Normal Mode NOTE: if Config is 0 no other parameters are allowed; otherwise the other parameters are mandatory  <b>&lt;samplerate&gt;</b> 0 – audio scheduler sample rate 8KHz (factory default) 1 - reserved  <b>&lt;samplewidth&gt;</b> 0 – 16 bits per sample 1 – reserved 2 – reserved 3 – 24 bits per sample 4 – 32 bits per sample  <b>&lt;audiomode&gt;</b> 0 – reserved 1 – Dual Mono (available only in Normal Mode) 2 – reserved  <b>&lt;edge&gt;</b> 0 – data bit is transmitted on falling edge of clock and sampled on rising edge of clock (factory default) 1 – data bit is transmitted on rising edge of clock and sampled on falling edge of clock  NOTE: this parameter is saved in NVM issuing AT&W command	

#DVIEXT - Digital Voiceband Interface Extension		SELINT 0,1,2
AT#DVIEXT?	Read command reports last setting, in the format:  #DVIEXT: <config>,<samplerate>,<samplewidth>,<audiomode>,<edge>	
AT#DVIEXT=?	Test command reports the range of supported values for parameters: <config>,<samplerate>,<samplewidth>,<audiomode>,<edge>	
Example		

### 3.5.7.19.8. Misellaneous commands

#### 3.5.7.19.8.1. PCM Play and Receive - #SPCM

#SPCM - PCM Play And Receive		SELINT 2									
AT#SPCM=<mode>,<dir>	<p>Execution command allows user either to send speech sample coming from microphone and/or downlink audio channel to serial port, or to reproduce a PCM coming from serial port to speaker and/or uplink audio channel; both modes are also available during speech calls.</p> <p>Parameters:</p> <p>&lt;mode&gt;: action to be execute;          1 - reproduce PCM stream from serial to selected path.          2 - send speech from selected path to serial.</p> <p>&lt;dir&gt;: Select the audio path.          0 - send/receive to/from analog front end          1 - send/receive to/from audio channel          2 - send/receive to/from both analog front end and audio channel          (not supported in 13.00.xxx SW release)</p> <p>Note: Execution command switches module in online mode, with flow control set by &amp;Kx. Module moves back to command mode either after entering the escape sequence +++ or as a consequence of a <b>DTR transition</b>.</p> <p>Note: PCM stream format must be 8 bit, 8KHz sampling, Mono.</p> <p>The following table summarizes the status of audio path during a speech call for different configurations and with sidetone disabled:</p> <table border="1"> <thead> <tr> <th></th> <th>mode = 1</th> <th>mode = 2</th> </tr> </thead> <tbody> <tr> <td><b>dir = 0</b></td> <td>Uplink off / Downlink on PCM stream on speaker</td> <td>Uplink off / Downlink off PCM stream from microphone</td> </tr> <tr> <td><b>dir = 1</b></td> <td>Uplink on / Downlink off PCM stream on Uplink</td> <td>Uplink off / Downlink off PCM stream from Downlink</td> </tr> </tbody> </table>		mode = 1	mode = 2	<b>dir = 0</b>	Uplink off / Downlink on PCM stream on speaker	Uplink off / Downlink off PCM stream from microphone	<b>dir = 1</b>	Uplink on / Downlink off PCM stream on Uplink	Uplink off / Downlink off PCM stream from Downlink	
	mode = 1	mode = 2									
<b>dir = 0</b>	Uplink off / Downlink on PCM stream on speaker	Uplink off / Downlink off PCM stream from microphone									
<b>dir = 1</b>	Uplink on / Downlink off PCM stream on Uplink	Uplink off / Downlink off PCM stream from Downlink									

	<b>dir = 2</b>	Uplink on / Downlink on PCM stream on both speaker and Uplink	Uplink off / Downlink off PCM stream from both microphone and Downlink
	<p>Sidetone is active during a voice call (HF path default configuration).</p> <p>Note: When DTMF decoder is enabled, PCM playing and recording are automatically disabled (AT#SPCM will return error).</p>		
<b>AT#SPCM=?</b>	<p>Test command returns the supported range of values for parameters &lt;mode&gt; and &lt;dir&gt;.</p> <p><b>#SPCM: &lt;mode&gt;,&lt;dir&gt;</b></p>		
<b>Example</b>	<pre>AT#SPCM=1,0 CONNECT +++ NO CARRIER</pre> <p>Note: after the CONNECT, PCM stream has to be sent to serial port</p> <pre>AT#SPCM=2,0 CONNECT +++ NO CARRIER</pre> <p>Note: after the CONNECT, PCM stream can be read from serial port</p>		

### 3.5.7.19.8.2. TeleType Writer - #TTY

<b>#TTY - TeleType Writer</b>		<b>SELINT 2</b>
<b>AT#TTY=&lt;support&gt;</b>	Set command enables/disables the TTY functionality.  Parameter: <b>&lt;support&gt;</b> 0 - disable TTY functionality (factory default) 1 - enable TTY functionality	
<b>AT#TTY?</b>	Read command returns whether the TTY functionality is currently enabled or not, in the format:	
	<b>#TTY: &lt;support&gt;</b>	
<b>AT#TTY=?</b>	Test command reports the supported range of values for parameter <support>.	

### 3.5.7.20. Emergency call and ECall Management

#### 3.5.7.20.1. Dial an emergency call - #EMRGD

#EMRGD – dial an emergency call		SELINT 2
AT#EMRGD[=<par>]	<p>This command initiates an emergency call.</p> <p>Parameters:</p> <p>&lt;par&gt;:</p> <ul style="list-style-type: none"> <li>0 – initiates an emergency call without specifying the Service Category. (default value)</li> <li>1..31 - sum of integers each representing a specific Emergency Service Category:           <ul style="list-style-type: none"> <li>1 - Police</li> <li>2 - Ambulance</li> <li>4 - Fire Brigade</li> <li>8 – Marine Guard</li> <li>16 - Mountain Rescue</li> </ul> </li> <li>32 - Manually Initiated eCall (if eCall is supported – Rel8 feature)</li> <li>64 - Automatically Initiated eCall (if eCall is supported– Rel8 feature)</li> </ul> <p>When the emergency call can initiate, an indication of the Service Categories selected is shown before the OK in the following format:</p> <p>#EMRGD: &lt;serv&gt;[,&lt;serv&gt;..[,&lt;serv&gt;]]</p> <p>Where</p> <p>&lt;serv&gt;</p> <ul style="list-style-type: none"> <li>“Police”</li> <li>“Ambul”</li> <li>“FireBrig”</li> <li>“MarineGuard”</li> <li>“MountRescue”</li> <li>“MleC”</li> <li>“AIeC”</li> </ul> <p>Example:</p> <pre>AT#EMRGD=17 #EMRGD: "Police"," MountRescue " OK</pre>	

<b>AT#EMRGD</b>	The execution command initiates an emergency call without specifying the Service Category.
<b>AT#EMRGD?</b>	<p>The read command reports the emergency numbers received from the network (Rel5 feature) and the associated service categories in the format</p> <pre>[#EMRGD: &lt;num1&gt;[,&lt;par1&gt;,&lt;serv&gt;[,&lt;serv&gt;..[,&lt;serv&gt;]]] [#EMRGD: &lt;numn&gt;[,&lt;parn&gt;,&lt;serv&gt;[,&lt;serv&gt;..[,&lt;serv&gt;]]]]</pre> <p>Where</p> <p><b>&lt;numn&gt;</b> Is the emergency number (that can be dialled with ATD command).</p> <p><b>&lt;parn&gt;</b> 1..31 - sum of integers each representing a specific Emergency Service Category:            1 - Police            2 - Ambulance            4 - Fire Brigade            8 - Marine Guard            16 - Mountain Rescue</p> <p>32 - Manually Initiated eCall (if eCall is supported – Rel8 feature)</p> <p>64 - Automatically Initiated eCall (if eCall is supported– Rel8 feature)</p> <p>Example:</p> <pre>AT#EMRGD? #EMRGD: 123,2,"Ambul" #EMRGD: 910,5,"Police","FireBrig" OK</pre>
<b>AT#EMRGD=?</b>	<p>Test command reports the supported range of values for parameter <b>&lt;par&gt;</b>.</p> <p>If eCall is supported 0-32,64</p> <p>If eCall is not supported 0-31</p>

### 3.5.7.20.2. IVS push mode activation - #MSDPUSH

#MSDPUSH – IVS push mode activation		SELINT 2
AT#MSDPUSH	Execution command enables IVS to issue the request for MSD transmission. It reuses downlink signal format to send a initiation message to the PSAP.	
AT#MSDPUSH=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.20.3. Sending MSD data to IVS - #MSDSEND

#MSDSEND – Sending MSD data to IVS		SELINT 2
AT#MSDSEND	<p>Execution command allows to send 140 bytes of MSD data to the IVS embedded while modem is in command mode.</p> <p>The device responds to the command with the prompt ‘&gt;’ and waits for the MSD to send.</p> <p>To complete the operation send <b>Ctrl-Z</b> char (<b>0x1A</b> hex); to exit without writing the message send <b>ESC</b> char (<b>0x1B</b> hex).</p> <p>If data are successfully sent, then the response is <b>OK</b>.  If data sending fails for some reason, an error code is reported</p> <p>Note: the maximum number of bytes to send is 140; trying to send more data will cause the surplus to be discarded and lost.</p>	
AT#MSDSEND=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.20.4. Initiate eCall - +CECALL

+CECALL – Initiate eCall		SELINT 2
AT+CECALL=<type of eCall>	Set command is used to trigger an eCall to the network. Based on the configuration selected, it can be used to either trigger a test call, a reconfiguration call, a manually initiated call or an automatically initiated call.	

	<p>Parameters:</p> <p><b>&lt;type of eCall&gt;:</b></p> <ul style="list-style-type: none"> <li>0 – test call</li> <li>1 – reconfiguration call</li> <li>2 – manually initiated eCall</li> <li>3 – automatically initiated eCall</li> </ul>
<b>AT+CECALL?</b>	Read command returns the type of eCall that is currently in progress in the format:  <b>+CECALL: [&lt;type of eCall&gt;]</b>
<b>AT+CECALL=?</b>	Test command reports the supported range of values for parameter <b>&lt;type of eCall&gt;</b> .

### 3.5.7.21. SSL Commands

#### 3.5.7.21.1. Configure general parameters of a SSL socket - #SSLCFG

#SSLCFG – Configure general parameters of a SSL socket	SELINT 2
<b>AT#SSLCFG=&lt;SSID&gt;,&lt;cid&gt;,&lt;pktSz&gt;,&lt;maxTo&gt;,&lt;defTo&gt;,&lt;txTo&gt;[,&lt;UNUSED_1&gt;[,&lt;UNUSED_2&gt;[,&lt;UNUSED_3&gt;[,&lt;UNUSED_4&gt;]]]]</b>	<p>This command allows configuring SSL connection parameters.</p> <p>Parameters:</p> <p><b>&lt;SSID&gt;</b> - Secure Socket Identifier 1 - Until now SSL block manages only one socket</p> <p><b>&lt;cid&gt;</b> - PDP Context Identifier. 1 - Until now only context one is supported.</p> <p><b>&lt;pktSz&gt;</b> - packet size to be used by the SSL/TCP/IP stack for data sending. 0 - select automatically default value (300). 1..1500 - packet size in bytes.</p> <p><b>&lt;maxTo&gt;</b> - exchange timeout (or socket inactivity timeout); in online mode, if there's no data exchange within this timeout period the connection is closed. 0 - no timeout 1..65535 - timeout value in seconds (default 90 s.)</p> <p><b>&lt;defTo&gt;</b> - Timeout that will be used by default whenever the corresponding parameter of each command is not set. 10...5000 - Timeout in tenth of seconds (default 100).</p> <p><b>&lt;txTo&gt;</b> - data sending timeout; in online mode after this period data are sent</p>

	<p>also if they're less than max packet size.      0 - no timeout      1..255 - timeout value in hundreds of milliseconds (default 50).</p> <p>Note: if secure socket is not enabled using #SSLLEN only test requests can be made. Read command can be issued if at least a &lt;SSId&gt; is enabled.</p> <p>Note: these values are automatically saved in NVM.</p>
AT#SSLCFG?	Read command reports the currently selected parameters in the format:  <b>#SSLCFG: &lt;SSId1&gt;,&lt;cid&gt;,&lt;pktSz&gt;,&lt;maxTo&gt;,&lt;defTo&gt;&lt;txTo&gt;,0,0,0,0</b>
AT#SSLCFG =?	Test command returns the range of supported values for all the parameters.  <b>#SSLCFG: (1),(1),(0-1500),(0-65535),(10-5000),(0-255),(0),(0),(0)</b>

### 3.5.7.21.2. Opening a socket SSL to a remote server - #SSLD

#SSLD – Opens a socket SSL to a remote server	SELINT 2
<p><b>AT#SSLD=&lt;SSId&gt;,&lt;rPort&gt;,&lt;IPAddress&gt;,&lt;ClosureType&gt;[,&lt;connMode&gt;[,&lt;Timeout&gt;]]</b></p> <p>Execution command opens a remote connection via socket secured through SSL. Both command and online modes can be used. In the first case ‘OK’ is printed on success, and data exchange can be performed by means of #SSLSEND and #SSLRECV commands. In online mode ‘CONNECT’ message is printed, and data can be sent/received directly to/by the serial port. Communication can be suspended by issuing the escape sequence (by default +++) and restored with #SSLO command.</p> <p>Parameters:</p> <p>&lt;<b>SSId</b>&gt; - Secure Socket Identifier      1 - Until now SSL block manage only one socket</p> <p>&lt;<b>rPort</b>&gt; - Remote TCP port to contact      1..65535</p> <p>&lt;<b>IPAddress</b>&gt; - address of the remote host, string type. This parameter can be either:</p> <ul style="list-style-type: none"> <li>- any valid IP address in the format: “xxx.xxx.xxx.xxx”</li> <li>- any host name to be solved with a DNS query</li> </ul> <p>&lt;<b>ClosureType</b>&gt; - how to close SSL socket      0 – SSL session id and keys are free then AT#SSLFASTD can't be used</p>	

to recover the last SSL session [default].  
 1 – SSL session id and keys are saved and a new connection can be made without a complete handshake using **AT#SSLFASTD**.

**<connMode>** - connection mode  
 0 – online mode connection.  
 1 – command mode connection (factory default).

**<Timeout>** - time-out in 100 ms units. It represents the maximum allowed TCP inter-packet delay. It means that, when more data is expected during the handshake, the module awaits **<Timeout> \* 100 msec**s for the next packet. If no more data can be read, the module gives up the handshake and raises an ERROR response.  
 Note: IT'S NOT the total handshake timeout or, in other words, it's not the absolute maximum time between the #SSLD issue and the CONNECT/OK/ERROR response. Though by changing this parameter you can limit the handshake duration (for example in case of congested network or busy server), there's no way to be sure to get the command response within a certain amount of time, because it depends on the TCP connection time, the handshake time and the computation time (which depends on the authentication mode and on the size of keys and certificates).  
 10..5000 - hundreds of ms (factory default is 100)

Note: if secure socket is not enabled using **AT#SSLEN** only test requests can be made.

Note: if timeout is not set for SSL connection the default timeout value, set by **AT#SSLCFG**, is used.

Note: in online mode the socket is closed after an inactivity period (configurable with #SSLCFG, with a default value of 90 seconds), and the '**NO CARRIER**' message is printed.

Note: in online mode data are transmitted as soon as the data packet size is reached or as after a transmission timeout. Both these parameters are configurable by using **#SSLCFG**.

Note: Before opening a SSL connection the GPRS context must have been activated by **AT#SGACT=x,1**.

Note: Before opening a SSL connection, make sure to have stored the needed secure data (Certificate, CA certificate, private key), using **AT#SSLSECDATA**, for the security level set through **AT#SSLSECCFG**.

<b>AT#SSLD=?</b>	Test command returns the range of supported values for all the parameters:  <b>#SSLD: (1),(1-65535),,(0,1),(0,1),(10-5000)</b>
------------------	--

### 3.5.7.21.3. Enabling a SSL socket - #SSLEN

<b>#SSLEN – Enable a SSL socket</b>		<b>SELINT 2</b>
<b>AT#SSLEN=&lt;SSID&gt;,&lt;Enable&gt;</b>	<p>This command enables a socket secured by SSL</p> <p>Parameters:</p> <p>&lt;<b>SSID</b>&gt; - Secure Socket Identifier 1 – Until now SSL block manages only one socket</p> <p>&lt;<b>Enable</b>&gt; 0 – deactivate secure socket [default] 1 – activate secure socket</p> <p>Note: if secure socket is not enabled only test requests can be made for every SSL command except #SSL (SSL status) which can be issued also if the socket is disabled. Read commands can be issued if at least a &lt;<b>SSID</b>&gt; is enabled.</p> <p>Note: these values are automatically saved in NVM.</p> <p>Note: an error is raised if #SSLEN=X,1 is issued when the socket ‘X’ is already enabled and if #SSLEN=X,0 is issued when the socket ‘X’ is already disabled.</p> <p>Note: a SSL socket cannot be disabled by issuing #SSLEN=1 if it is connected.</p>	
<b>AT#SSLEN?</b>	<p>Read command reports the currently enable status of secure socket in the format:</p> <p><b>#SSLEN: &lt;SSID&gt;,&lt;Enable&gt;&lt;CR&gt;&lt;LF&gt;&lt;CR&gt;&lt;LF&gt;OK</b></p>	

<b>AT#SSLEN =?</b>	Test command returns the range of supported values for all the parameters:  <b>#SSLEN: (1),(0,1)</b>
--------------------	--

### 3.5.7.21.4. Fast redial of a SSL socket - #SSLFASTD

#SSLFASTD – Fast redial of a SSL socket	SELINT 2
<p><b>AT#SSLFASTD=&lt;SSID&gt;[,&lt;connMode&gt;[,&lt;Timeout&gt;]]</b></p> <p>This command allows to restart the last SSL connection without a complete handshake. In this way the dial is performed faster and with a lower amount of tCP payload.</p> <p>Parameters:</p> <p>&lt;<b>SSID</b>&gt; - Secure Socket Identifier 1 - Until now SSL block manage only one socket.</p> <p>&lt;<b>connMode</b>&gt; - connection mode 0 – online mode connection. 1 – command mode connection (factory default).</p> <p>&lt; <b>Timeout</b> &gt; - time-out in 100 ms units. It represents the TCP inter-packet delay. Note: it DOES NOT represent the total handshake timeout. 10..5000 - hundreds of ms (factory default is 100).</p> <p>Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.</p> <p>Note: if timeout is not set for SSL connection the default timeout value, set by <b>AT#SSLCFG</b>, is used.</p> <p>Note: Before opening a SSL connection the GPRS context must have been activated by <b>AT#SGACT=X,1</b>.</p> <p>Note: if an error occurs during reconnection, the socket can not be reconnected and then a new connection has to be done.</p> <p>Note: if the remote server cleans SessionID cache before reconnection the full handshake will be made.</p>	

<b>AT#SSLFASTD=?</b>	Test command returns the range of supported values for all the parameters:  <b>#SSLFASTD: (1),(0,1),(10-5000)</b>
----------------------	---

### 3.5.7.21.5. Closing a SSL socket - #SSLH

#SSLH – Close a SSL socket		SELINT 2
<b>AT#SSLH=&lt;SSID&gt;[,&lt;ClosureType&gt;]</b>	<p>This command allows closing the SSL connection.</p> <p>Parameters:</p> <p>&lt;<b>SSID</b>&gt; - Secure Socket Identifier 1 - Until now SSL block manage only one socket.</p> <p>&lt;<b>ClosureType</b>&gt;: how to close SSL socket 0 – SSL session id and keys are free then <b>AT#SSLFASTD</b> can not be used to recover the last SSL session. 1 – SSL session id and keys are saved and a new connection can be made without a complete handshake using <b>AT#SSLFASTD</b>.</p> <p>Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.</p> <p>Note: in client side if &lt;<b>ClosureType</b>&gt; is not set the value set into <b>AT#SSLID</b> is used.</p>	
<b>AT#SSLH=?</b>	<p>Test command returns the range of supported values for all the parameters:</p> <p><b>#SSLH: (1),(0,1)</b></p>	

### 3.5.7.21.6. Restoring a SSL socket after a +++ - #SSLO

#SSLO – Restore a SSL socket after a +++		SELINT 2
<b>AT#SSLO=&lt;SSID&gt;</b>	This command allows to restore a SSL connection (online mode) suspended by an escape sequence (+++). After the connection restore, the CONNECT message is printed.	

	<p>Please note that this is possible even if the connection has been started in command mode (#SSLD with &lt;connMode&gt; parameter set to 1).</p> <p>Parameters:  <b>&lt;SSId&gt;</b> - Secure Socket Identifier          1 - Until now SSL block manage only one socket.</p> <p>Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.</p> <p>Note: Before opening a SSL connection the GPRS context must have been activated by <b>AT#SGACT=X,1</b>.</p> <p>Note: if an error occur during reconnection the socket can not be reconnected then a new connection has to be done.</p>
<b>AT#SSLO=?</b>	<p>Test command returns the range of supported values for all the parameters:</p> <p><b>#SSLO: (1)</b></p>

### 3.5.7.21.7. Reading data from a SSL socket - #SSLRecv

<b>#SSLRecv – Read data from a SSL socket</b>		<b>SELINT 2</b>
<b>AT#SSLRecv=&lt;SSId&gt;,&lt;MaxNumByte&gt;[,&lt;TimeOut&gt;]</b>	<p>This command allows receiving data from a secure socket.</p> <p>Parameters:  <b>&lt;SSId&gt;</b> - Secure Socket Identifier          1 - Until now SSL block manage only one socket.</p> <p><b>&lt;MaxNumByte&gt;</b> - max number of bytes to read          1..1000</p> <p><b>&lt;Timeout&gt;</b> - time-out in 100 ms units          10..5000 - hundreds of ms (factory default is 100)</p>	

	<p>If no data are received the device responds:</p> <pre>#SSLRECV: 0&lt;CR&gt;&lt;LF&gt; TIMEOUT&lt;CR&gt;&lt;LF&gt; &lt;CR&gt;&lt;LF&gt; OK</pre> <p>If the remote host closes the connection the device responds:</p> <pre>#SSLRECV: 0&lt;CR&gt;&lt;LF&gt; DISCONNECTED&lt;CR&gt;&lt;LF&gt; &lt;CR&gt;&lt;LF&gt; OK</pre> <p>If data are received the device responds:</p> <pre>#SSLRECV: NumByteRead&lt;CR&gt;&lt;LF&gt; ...(Data read)... &lt;CR&gt;&lt;LF&gt; &lt;CR&gt;&lt;LF&gt; OK</pre> <p>Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.</p> <p>Note: if timeout is not set for SSL connection the default timeout value, set through <b>AT#SSLCFG</b>, is used.</p> <p>Note: before receiving data from the SSL connection it has to be established using <b>AT#SSLID</b>.</p>
<b>AT#SSLRECV=?</b>	<p>Test command returns the range of supported values for all the parameters:</p> <p><b>#SSLRECV: (1),(1-1000),(10-5000)</b></p>

### 3.5.7.21.8. Reporting the status of a SSL socket - #SSLS

<b>#SSLS – Report the status of a SSL socket</b>		<b>SELINT 2</b>
<b>AT#SSLS=&lt;SSId&gt;</b>	<p>This command reports the status of secure sockets.</p> <p>Parameters:</p> <p>&lt;<b>SSId</b>&gt; - Secure Socket Identifier 1 - Until now SSL block manages only one socket</p> <p>If secure socket is connected the device responds to the command:</p>	

	<p><b>#SSLS: &lt;SSID&gt;,2,&lt;CipherSuite&gt;</b></p> <p>otherwise:</p> <p><b>#SSLS: &lt;SSID&gt;,&lt;ConnectionStatus&gt;</b></p> <p>&lt;ConnectionStatus&gt; available values are:            0 – Socket Disabled            1 – Connection closed            2 – Connection open</p> <p>Note: this command can be issued even if the &lt;SSID&gt; is not enabled.</p>
<b>AT#SSLS=?</b>	<p>Test command returns the range of supported values for all the parameters.</p> <p><b>#SSLS: (1)</b></p>

### 3.5.7.21.9. Configuring security parameters of a SSL socket - #SSLSECCFG

<b>#SSLSECCFG – Configure security parameters of a SSL socket</b>		<b>SELINT 2</b>
<b>AT#SSLSECCFG=</b> <b>&lt;SSID&gt;,</b> <b>&lt;CipherSuite&gt;,</b> <b>&lt;auth_mode&gt;</b>	<p>This command allows configuring SSL connection parameters.</p> <p>Parameters:</p> <p><b>&lt;SSID&gt;</b> - Secure Socket Identifier            1 - Until now SSL block manage only one socket</p> <p><b>&lt;CipherSuite&gt;</b>            0 - Chiper Suite is chosen by remote Server [default]            1 - TLS_RSA_WITH_RC4_128_MD5            2 - TLS_RSA_WITH_RC4_128_SHA</p>	

	<p>3 - TLS_RSA_WITH_AES_256_CBC_SHA</p> <p><b>&lt;auth_mode&gt;</b></p> <p>0 - SSL verify none [default]      1 - Manage server authentication      2 - Manage server and client authentication if requested by the remote server</p> <p>Note: if SSL verify none is set no security data are needed(Client certificate, Server CAcertificate and Client private key).</p> <p>Note: if only server authentication is managed then Server CAcertificate has to be stored through <b>AT#SSLSECDATA</b>.</p> <p>Note: if server and client authentication are managed then client certificate and private key, and server CAcertificate have to be stored through <b>AT#SSLSECDATA</b>. Please note that private keys with password are not supported,</p> <p>Note: only “rsa_sign” certificates are supported by the Telit Module in client authentication. The remote server must support this certificate type, otherwise the handshake will fail.</p> <p>Note: if secure socket is not enabled using #SSLEN only test requests can be made. Read command can be issued if at least a &lt;SSID&gt; is enabled.</p> <p>Note: these values are automatically saved in NVM.</p>
<b>AT#SSLSECCFG?</b>	Read command reports the currently selected parameters in the format:  <b>#SSLSECCFG: &lt;SSID1&gt;,&lt;CipherSuite&gt;,&lt;auth_mode&gt;</b>
<b>AT#SSLSECCFG =?</b>	Test command returns the range of supported values for all the parameters.  <b>#SSLSECCFG: (1),(0-2),(0-2)</b>

### 3.5.7.21.10. Managing the security data - #SSLSECDATA

<b>#SSLSECDATA – Manage the security data</b>		<b>SELINT 2</b>
<b>AT#SSLSECDATA =&lt;SSID&gt;,&lt;Action&gt;,&lt;DataType&gt;[,&lt;Size&gt;]</b>	This command allows to store, delete and read security data (Certificate, CAcertificate, private key) into NVM.  Parameters:	

	<p><b>&lt;SSId&gt;</b> - Secure Socket Identifier 1 - Until now SSL block manages only one socket.</p> <p><b>&lt;Action&gt;</b> - Action to do. 0 – Delete data from NVM. 1 – Store data into NVM. 2 – Read data from NVM .</p> <p><b>&lt;DataType&gt;</b> 0 – Certificate. 1 – CA certificate. 2 – RSA Private key.</p> <p><b>&lt;Size&gt;</b> - Size of security data to be stored 1..2047</p> <p>If the <b>&lt;Action&gt; parameter</b> is 1 (store data into NVM) the device responds to the command with the prompt ‘&gt;’ and waits for the data to store. To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex). If data are successfully stored, then the response is OK; if it fails for some reason, an error code is reported.</p> <p>If the <b>&lt;Action&gt;</b> parameter is 2 (read data from NVM), data specified by <b>&lt;DataType&gt;</b> parameter is shown in the following format:</p> <pre>#SSLSECDATA: &lt;connId&gt;,&lt;DataType&gt; &lt;DATA&gt;  OK</pre> <p>If <b>&lt;DataType&gt;</b> data has not been stored (or it has been deleted) the response has the following format:</p> <pre>#SSLSECDATA: &lt;connId&gt;,&lt;DataType&gt; No data stored  OK</pre> <p>Note: Secured data has to be in PEM format.</p> <p>Note: private keys with password ARE NOT supported.</p> <p>Note: only “rsa_sign” certificates are supported by the Telit Module in client</p>
--	---

	<p>authentication. The remote server must support this certificate type, otherwise the handshake will fail.</p> <p>Note: &lt;size&gt; parameter is mandatory if the &lt;write&gt; action is issued, but it has to be omitted for &lt;delete&gt; or &lt;read&gt; actions are issued.</p> <p>Note: if secure socket is not enabled using AT#SSLEN only test requests can be made.</p> <p>Note: If socket is connected an error code is reported.</p>
<b>AT#SSLSECDATA?</b>	<p>Read command reports what security data are stored in the format:</p> <p><b>#SSLSECDATA: &lt;SSID 1&gt;,&lt;CertIsSet&gt;,&lt;CAcertIsSet&gt;,&lt;PrivKeyIsSet&gt;</b></p> <p>&lt;CertIsSet&gt;, &lt;CAcertIsSet&gt;, &lt;PrivKeyIsSet&gt; are 1 if related data are stored into NVM otherwise 0.</p>
<b>AT#SSLSECDATA =?</b>	<p>Test command returns the range of supported values for all the parameters:</p> <p><b>#SSLSECDATA: (1),(0-2),(0-2),(1-2047)</b></p>

### 3.5.7.21.11. Sending data through a SSL socket - #SSLSEND

<b>#SSLSEND – Send data through a SSL socket</b>		<b>SELINT 2</b>
<b>AT#SSLSEND=&lt;SSID&gt;[,&lt;Timeout&gt;]</b>	<p>This command allows sending data through a secure socket.</p> <p>Parameters:</p> <p>&lt;SSID&gt; - Secure Socket Identifier 1 - Until now SSL block manage only one socket.</p> <p>&lt;Timeout&gt; - socket send timeout, in 100 ms units. 10..5000 - hundreds of ms (factory default is 100)</p> <p>The device responds to the command with the prompt '&gt;' and waits for the data to send.</p>	

	<p>To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex).</p> <p>If data are successfully sent, then the response is OK. If data sending fails for some reason, an error code is reported</p> <p>Note: the maximum number of bytes to send is 1023; trying to send more data will cause the surplus to be discarded and lost.</p> <p>Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.</p> <p>Note: if timeout is not set for SSL connection the default timeout value, set by <b>AT#SSLCFG</b>, is used.</p> <p>Note: Before sending data through the SSL connection it has to be established using <b>AT#SSLD</b>.</p>
<b>AT#SSLSEND=?</b>	<p>Test command returns the range of supported values for all the parameters:</p> <p><b>#SSLSEND: (1),(10-5000)</b></p>

### 3.5.7.21.12. Sending data through a secure socket in Command Mode extended - #SSLSENDEXT

#### #SSLSENDEXT – Send data trhough a secure socket in Command Mode extended SELINT 2

<b>AT#SSLSENDEXT=&lt;SSID&gt;,&lt;bytestosend&gt;[,&lt;Timeout&gt;]</b>	<p>This command allows sending data through a secure socket.</p> <p>Parameters:</p> <ul style="list-style-type: none"> <li>&lt;<b>SSID</b>&gt; - Secure Socket Identifier 1 - Until now SSL block manage only one socket.</li> <li>&lt;<b>bytestosend</b>&gt; - number of bytes to be sent Please refer to test command for range</li> <li>&lt;<b>Timeout</b>&gt; - time-out in 100 ms units 10..5000 - hundreds of ms (factory default is 100)</li> </ul> <p>The device responds to the command with the prompt '&gt;' &lt;greater_than&gt;&lt;space&gt; and waits for the data to send. When &lt;<b>bytestosend</b>&gt; bytes have been sent, operation is automatically completed. If data are successfully sent, then the response is <b>OK</b>. If data sending fails for some reason, an error code is reported.</p>
---	--

	<p>Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.</p> <p>Note: if timeout is not set for SSL connection the default timeout value, set by <b>AT#SSLCFG</b>, is used.</p> <p>Note: Before sending data through the SSL connection it has to be established using <b>AT#SSLD</b>.</p> <p>Note: all special characters are sent like a generic byte. (For instance: 0x08 is simply sent through the socket and don't behave like a BS, i.e. previous character is not deleted)</p>
<b>AT#SSLSENDEXT =?</b>	<p>Test command returns the range of supported values for parameters <b>&lt;SSID&gt;</b> , <b>&lt;bytestosend&gt;</b> and <b>&lt;Timeout&gt;</b>. <b>#SSLSENDEXT: (1),(1-1500),(10-5000)</b></p>
Example	<p>Open the socket in command mode: at#ssld=1,443,&lt;port&gt;,"IP address",0,1 OK Give the command specifying total number of bytes as second parameter: at#sslsendext=1,256,100</p>

## 4. List of acronyms

<b>ARFCN</b>	Absolute Radio Frequency Channel Number
<b>AT</b>	Attention command
<b>BA</b>	BCCH Allocation
<b>BCCH</b>	Broadcast Control Channel
<b>CA</b>	Cell Allocation
<b>CBM</b>	Cell Broadcast Message
<b>CBS</b>	Cell Broadcast Service
<b>CCM</b>	Current Call Meter
<b>CLIR</b>	Calling Line Identification Restriction
<b>CTS</b>	Clear To Send
<b>CUG</b>	Closed User Group
<b>DCD</b>	Data Carrier Detect
<b>DCE</b>	Data Communication Equipment
<b>DCS</b>	Digital Cellular System
<b>DGPS</b>	Differential GPS, the use of GPS measurements, which are differentially corrected
<b>DNS</b>	Domain Name System
<b>DSR</b>	Data Set Ready
<b>DTE</b>	Data Terminal Equipment
<b>DTMF</b>	Dual Tone Multi Frequency
<b>DTR</b>	Data Terminal Ready
<b>GGA</b>	GPS Fix data
<b>GLL</b>	Geographic Position – Latitude/Longitude
<b>GLONASS</b>	Global positioning system maintained by the Russian Space Forces
<b>GMT</b>	Greenwich Mean Time
<b>GNSS</b>	Any single or combined satellite navigation system (GPS, GLONASS and combined GPS/GLONASS)
<b>GPRS</b>	Global Packet Radio Service
<b>GPS</b>	Global Positioning System
<b>GSA</b>	GPS DOP and Active satellites
<b>GSM</b>	Global System Mobile
<b>GSV</b>	GPS satellites in view
<b>HDLC</b>	High Level Data Link Control
<b>HDOP</b>	Horizontal Dilution of Precision
<b>IMEI</b>	International Mobile Equipment Identity
<b>IMSI</b>	International Mobile Subscriber Identity
<b>IP</b>	Internet Protocol
<b>IRA</b>	International Reference Alphabet
<b>IWF</b>	Interworking Function
<b>MO</b>	Mobile Originated
<b>MT</b>	<i>either</i> Mobile Terminated <i>or</i> Mobile Terminal

<b>NMEA</b>	National Marine Electronics Association
<b>NVM</b>	Non Volatile Memory
<b>PCS</b>	Personal Communication Service
<b>PDP</b>	Packet Data Protocol
<b>PDU</b>	Packet Data Unit
<b>PIN</b>	Personal Identification Number
<b>PPP</b>	Point to Point Protocol
<b>PUK</b>	Pin Unblocking Code
<b>RLP</b>	Radio Link Protocol
<b>RMC</b>	Recommended minimum Specific data
<b>RTS</b>	Request To Send
<b>SAP</b>	SIM Access Profile
<b>SCA</b>	Service Center Address
<b>SMS</b>	Short Message Service
<b>SMSC</b>	Short Message Service Center
<b>SMTP</b>	Simple Mail Transport Protocol
<b>TA</b>	Terminal Adapter
<b>TCP</b>	Transmission Control Protocol
<b>TE</b>	Terminal Equipment
<b>UDP</b>	User Datagram Protocol
<b>USSD</b>	Unstructured Supplementary Service Data
<b>UTC</b>	Coordinated Universal Time
<b>VDOP</b>	Vertical dilution of precision
<b>VTG</b>	Course over ground and ground speed
<b>WAAS</b>	Wide Area Augmentation System

## 5. Document History

Revision	Date	SW release	Changes																					
ISSUE #0	2006-08-04	7.02.01	Initial release																					
ISSUE #1	2006-10-26	7.02.02	<p>3.2.2.1 +CME ERROR: - ME Error Result Code: updated</p> <p>3.2.2.2 +CMS ERROR - Message Service Failure Result Code: updated</p> <p>3.2.6 Factory and user profile: updated</p> <p>-“GPS Commands Set” total update</p> <p>-updated the following commands description under SELINT 0, SELINT 1 and SELINT 2 paragraph: +COPN, +CCFC, +CCWA, +CPIN, +CIND, +CNMI, +COPS, +CMEE, #SKTD, #AUTOATT, +CALA, +CAOC, +CACM, +CAMM, +CPUC, S12</p> <p>-updated under SELINT 0 and SELINT 1 command +CPAS, #FTPOOPEN, \Q, #CSURV, #CSURVC</p> <p>-updated the following commands only under SELINT 2: +CMUX, +CLCC, +CMGL, +CMGR, #LSCRIPT</p> <p>-removed from the AT commands table under SELINT 0 and SELINT 1 the following commands: #CBC and #EMAILMSG</p> <p>-added new commands (for SELINT 2): #EXECSCR, #STARTMODESCR</p>																					
ISSUE #2	2007-03-16	7.02.03	<p>-Revision of the whole document form.</p> <p>-Added new commands: #ENS, +WS46, +CPOL, +PACSP, #SPN, #SLED, #SLEDSAV, #VAUXSAV, #V24CFG, #V24, #AXE, #ACALEXT, #MBN, #MWI, #SPKMUT, multisocket commands, SIM toolkit commands, \$GPSS, \$GPSCON, \$GPSPRG, \$GPSPS, \$GPSWK</p> <p>-3.2.6 Factory and user profile: updated</p> <p>-Removed AT commands for camera and #I2S1</p> <p>-Updated following AT commands: +CNUM, +CPIN, +CPBW, +CPBS, +CLIP, #STGI, #FTPOOPEN, \$GPSACP,</p>																					
ISSUE #3	2007-08-10		Update list of products to which this document can be applied																					
ISSUE #4	2007-11-19	7.02.04	<p>Added new commands: #CEER, #SMSMODE, #Z, #TEMPMON, #HFRECG, #HSRECG, #PRST, #PSEL, #PSAV, #PSET, #SHFAGC, #SHFN, #SHSAGC, #SHSEC, #SHSNR, #SHSSD, #GSMAD, #CSURVP, #CSURVPC</p> <p>Added: 3.5.7.12 Telefonica OpenGate M2M AT Commands Set</p>																					
ISSUE #5	2008-07-09	7.02.05 / 7.03.00	<p>modified description of AT#SD and AT#SL, ...</p> <table border="1"> <tr> <td colspan="3">New commands</td> </tr> <tr> <td>+CGEREP</td> <td>#TSVOL</td> <td>#REGMODE</td> </tr> <tr> <td>#TXMONMODE</td> <td>#SIMDET</td> <td>#ENHSIM</td> </tr> <tr> <td>#TTY</td> <td>#CPUMODE</td> <td>#GSMCONT</td> </tr> <tr> <td>#CGPADDR</td> <td>#NWSCANTMR</td> <td>#OSC32KHZ</td> </tr> <tr> <td>#CACHEDNS</td> <td>#DNS</td> <td>#ICMP</td> </tr> <tr> <td>#TCPMAXDAT</td> <td>#TCPREASS</td> <td></td> </tr> </table>	New commands			+CGEREP	#TSVOL	#REGMODE	#TXMONMODE	#SIMDET	#ENHSIM	#TTY	#CPUMODE	#GSMCONT	#CGPADDR	#NWSCANTMR	#OSC32KHZ	#CACHEDNS	#DNS	#ICMP	#TCPMAXDAT	#TCPREASS	
New commands																								
+CGEREP	#TSVOL	#REGMODE																						
#TXMONMODE	#SIMDET	#ENHSIM																						
#TTY	#CPUMODE	#GSMCONT																						
#CGPADDR	#NWSCANTMR	#OSC32KHZ																						
#CACHEDNS	#DNS	#ICMP																						
#TCPMAXDAT	#TCPREASS																							

ISSUE #6	2009-08-03	SW 7.03.01 / 7.02.06  SW 10.0.1	<ul style="list-style-type: none"> <li>- Applied new layout.</li> <li>- Deleted ME Error Result Code [566 – 573] (§3.2.2.1)</li> <li>- Reorganized the availability table (merged columns by family of product, exported GPS commands to their own table).</li> <li>- Updated the commands whose values are automatically stored in NVM. Specified those for the SW 10.xx.xxx platform.</li> <li>- Added/edited the following commands: #ACAL, #ATRUN, #AXE, #BIQUADIN, #CCLK, #CEER, #CESTHLCK, #CFLO, #CGDATA, #CGPADDR, #CPASMODE, #EMAIL, #EVMONI, #SMSATRUN, #SMSATRUNCFG, #SMSATWL, #TCPATRUNCFG, #TCPATRUNL, #TCPATRUNFRWL, #TCPATRUNAUTH, #TCPATRUND, #TCPATRUNCLOSE, #TCPATRUNCMDSEQ, #TCPATCONSER, #ATRUNDELAY, #ENAEVMONI, #ENAEVMONICFG, #FASTCCID, #FTPAPP, #FTPPSIZE, #FTPGET, #FTPGETPKT, #FTPPUT, #FTPRECV, #FTPREST, #GPIO, #GPPPCFG, #GSMAD, #GSMCONT, #HFMICG, #HFRECG, #HSMICG, #HSRECG, #I2CWR, #I2CRD, #JDR, #LCSCRIPT, #MONI, #NITZ, #OAP, #OTASNAP, #OTASUAN, #CMGS, #CMGW, #PING, #PSMRI, #QSS, #REBOOT, #SA, #SCFG, #SCFGEXT, #SD, #SERVINFO, #SGACTAAUTH, #SGACTCFG, #SIMDET, #SKTD, #SKTL, #SL, #/, #SLUDP, #SMOV, #SPCM, #SRECV, #SS, #SEND, #STARTMODESCR, #SWLEVEL, #TEMPMON, #TONEEXT, #TSVOL, #VAUX, #V24MODE, #V24CFG, #Z, \$GPSACP, \$GPSAP, \$GPSCON, \$GPSPS, \$GPSWK, +CCLK, +CEER, +CFUN, +CGPADDR, +CGSMS, +CMGD, +CMGW, +CNMI, +CPBS, +CSMP, +DS, +VTS, SO.</li> <li>- Deleted commands: AT\B, AT\K, AT\N.</li> <li>- Specified SW10.xx.xxx default values</li> </ul>
ISSUE #7	2010-05-07	SW 7.03.02 / 7.02.07  SW 10.0.2	<ul style="list-style-type: none"> <li>- New commands added for SW 7.03.02 / 7.02.07: #SCFGEXT2, #CMGLCONCINDEX, #CODECINFO, #GSMCONTCFG, #SNUM, #SENDEXT, +CMAR</li> <li>- New commands added for SW 10.0.2: #PADFWD, #PADCMD; new parameters for CFUN: CFUN=1,1</li> <li>- Updated Timeout Table par. 3.2.4</li> <li>- Removed note 18</li> <li>- Updated Table Factory Profile and User Profile par. 3.3.1</li> <li>- Deleted commands: &amp;G, &amp;Q</li> <li>- Updated commands: #JDR, #FTPDELETE, +CNMI, #CMGW, #OTASUAN, #I2CWR, #I2CRD, #ATS38, #GSMAD, +CFUN, &amp;D, #E2ESC, #TXMONMODE, #SNUM, #STIA, #FTPPSIZE, #COPSMODE, # SCFGEXT, #SCFGEXT2, #SD, #SELINT, #ADC, #DVI, #EMAILD, #EVMONI, #GPPPCFG, #MSCLASS, #SEMAIL, #SPCM, #SWLEVEL, #TONEEXT, #UDTSET, +CMER, #E2ESC, #SLUDP, #SIMATR</li> </ul>
ISSUE#8	2010-07-26	SW 7.03.02 /	<ul style="list-style-type: none"> <li>- Updated commands: #SCFGEXT2, S38, #SEMAIL, #EMAILD,</li> </ul>

		7.02.07  SW 10.0.3	<ul style="list-style-type: none"> <li>#CSURVF, +CMAR, #CCLK, +CMGL, +CFUN, #FTPOOPEN, #OTASNAP, #OTASUAN, #AUTOBND, #STIA, #STGI, +CLCC, +CNMI, +CPMS, +CSAS, #PLMNMODE, #SMSMODE, #REGMODE, #AUTOBND, #ENHSIM, #SWLEVEL, #NITZ, #STIA, #JDR, #TSVOL</li> <li>- New commands added for SW 10.0.3: +CPLS, +CGCMOD, #STTA, #CMEEMODE, #SGACTCFGEXT, #BASE64, #CEERNET, #ENHRST, #SII, #OTASETRI</li> <li>- Updated references specification from 07.05, 07.07, 03.40 to 27.005, 27.007, 23.040, etc</li> </ul>
ISSUE#9	2010-10-04	SW 10.0.4	<ul style="list-style-type: none"> <li>- Added GL865-DUAL to the applicability table and the matrix</li> </ul>
ISSUE#10		SW 7.03.02 / 7.02.07  SW 10.0.4	<ul style="list-style-type: none"> <li>- New commands added for SW 10.0.4: #MSDPUSH, #MSDSEND, +CECALL, #SYSHALT, #SIMINCFG, #EMRGD, #BIQUADINEX, #BIQUADOUTEX, #TXCNI, #DTMF, #DTMFCFG, #OTAIPCFG, #OTAIPUPD, #OTASNAPIP, #OTASNAPIPCFG, #HFCFG, #SMTPCL</li> <li>- Modified par 3.3.1 and 3.2.4</li> <li>- Edited #DNS command description</li> <li>- Updated tab at 3.5.2.1</li> <li>- Reorganized the matrix</li> </ul>
ISSUE #11	2011-07-12	SW 7.03.03 / 7.02.08  SW 10.0.5	<ul style="list-style-type: none"> <li>- Modified commands: #CAP, #CSURV, #CSURVC, #EVMONI, #FTPGETPKT, #QDNS, #DTMF, \$GPSACP, \$GPSAT, \$GPSCON, \$GPSNMUN, \$GPSP, \$GPSPS, \$GPSR, \$GPSSW, \$GPSWK</li> <li>- New commands: #ALARMPIN, #CFF, #SSENDUDP, #SSENDUDPEXT, #ST</li> <li>- New paragraph added “SSL commands” 3.5.7.17 : #SSLCFG, #SSLD, #SSLLEN, #SSLFASTD, #SSLH, #SSLO, #SSLRECV, #SSLS, #SSLSECCFG, #SSLSECDATA, #SSLSEND</li> </ul>
ISSUE #12	2011-09-09	SW 7.03.03 / 7.02.08  SW 10.0.5	<ul style="list-style-type: none"> <li>- Updated #SIMDET, #JDR, #NITZ, #PLMNMODE, #REGMODE, #SERVINFO, #SMSMODE, #SSLSECDATA, #STIA, #SWLEVEL, #TEMPMON, +CGREG, +CSSN</li> <li>- Edited par 3.4 Command Availability Table</li> </ul>
ISSUE #13	2012-03-20	SW 7.03.03 / 7.02.08  SW 10.0.5  SW 13.00.000	<ul style="list-style-type: none"> <li>- Added GE910-QUAD in the availability table.</li> <li>- Specified 13.00.000 parameter in AT#CODEC command description (SELINT=2)</li> </ul>
ISSUE #14	2012-08-20	SW 7.03.03 / 7.02.08  SW 10.0.6	<ul style="list-style-type: none"> <li>- New: #BNDLOCK, #BUZZERMODE, #CHUP, #DVIEEXT, #ENCALG, #FTPAPP EXT, #FTPCFG, #GPPPCFGEXT, #JDRENH, #RS485, #SLASTCLOSURE, +CSV, #NTP, \$FTPGETIFIX, \$GPSGPIO, \$GPSIFIX</li> <li>- Updated: #AUTOBND, #AXE, #CODEC, #DTMF, #DTMFCFG,</li> </ul>

		SW 13.00.002	#ENS, #FTPAPP, #FTPPUT, , #I2CRD, #I2CWR, #SCFGEXT, #SERVINFO, #SMSMODE, #SRECV, #SEND, #SENDUDP, #SSLD, #TXCNI, \$GPSACP, #GPSAT, \$GPSCON, \$GPSD, \$GPSNMUN, \$GPSP, \$GPSPS, \$GPSR, \$GPSRST, \$GPSSAV, \$GPSSW, \$GPSWK, +CGDCONT, +CMUX, +CSMP, +CSQ, #SD, #SL, #SKTSET, #SKTD, #SKTL, @SKTL, +FMI, +FMM, +FMR, +FTS, +FRS, +FTM, +FRM, +FTH, +FRH, +FLO, +FPR, +FDD, +CBST, +CRLP, #TTY
ISSUE # 15	2012-10-18	SW 7.03.03 / 7.02.08	- Edited par 3.2.2.1 ME Error Result Code - +CME ERROR: <err>
		SW 10.0.6	- Edited par 3.3.1 Factory Profile And User Profiles
		SW 13.00.002	- Edited par 3.4 Command Availability Table - Updated: #FTPAPP, #FTPPUT, #SCFGEXT, #SGACTAUTH, #SLED, #SRECV, +IPR, #STIA
ISSUE # 16	2013-02-07	SW 7.03.03 / 7.02.08	- Added GL865-DUAL V3, GL868-DUAL V3 in the availability table - Edited par 3.2.4 and 3.3.1
		SW 10.0.xx7 16.00.xx2	- Edited par 3.4 Command Availability Table - New: #CONSUME, #CSURVTA, #RFSTS, #HTTP*, #FRWLIPV6, #MMS*, #SSLSENDEXT, #ECHOCFG, #CMUXMODE, #PORTCFG
		SW 13.00.xx3	- Updated: #DTMF, #LCSCRIPT, #NWDNS, #SCFGEXT2, #SLASTCLOSURE, #SPCM, #STARTMODESCR, #WAKE, \$FTPGETFIX, \$GPSACP, \$GPSAT, \$GPSCON, \$GPSD, \$GPSGPIO, \$GPSFIX, \$GPSNMUN, \$GPSP, \$GPSPS, \$GPSR, \$GPSRST, \$GPSSAV, \$GPSSW, \$GPSWK, #CSURV*, +CFUN, +CMUX, +IPR, #ENAUSIM, #SNUM, #SMTPCL, #FTPCFG, #JDRENH, #SGACT, #EVMONI, #SSLD, #SSLSECCFG
ISSUE # 17	2013-05-24	SW 10.0.xx7 16.00.xx2	- Added GE910-GNSS in the availability table, deleted GM862 and GE863 families - Edited par 3.2, 3.2.4, 3.5.3.6 - Updated: #DNS, #FTPCFG, #GPIO, #MONI, #SCFGEXT2, #SPN, #WAKE, +CMUX, #MMSSNH, \$FTPGETIFIX, \$GPSACP, \$GPSAT, \$GPSCON, \$GPSD, \$GPSGPIO, \$GPSFIX, \$GPSNMUN, \$GPSP, \$GPSPS, \$GPSR, \$GPSRST, \$GPSSAV, \$GPSSW, \$GPSWK,
		SW 13.00.xx4	- New: \$HTTPGETIFIX, \$GPSSERSPEED, \$DPATCH, \$EPATCH, \$LPATCH, \$WPATCH
